BRAGG® SPREADING GREAT HEALTH SINCE 1912

IT'S 100% ORGANIC!

ORGANIC EXTRA VIRGIN GREEK OLIVE OIL

Bragg Award Winning Organic Unrefined - Unfiltered Olive Oil comes from centuries old Greek Olive Trees. These trees produce the richest organic, extra-virgin culinary olive oil in the world! Our select, hand-picked Organic Greek Koroneiki Olives contain amazing natural, heart-healthy Polyphenol Antioxidants. This delicious, smooth bodied oil, adds the finest flavor and aroma to salads, vegetables, pasta, sauces, sautés, dips, potatoes & even on popcorn. Also apply to face and body for healthy glowing skin!

BRAGG
World's Finest ORGANIC Unrefined - Unfiltered Extra Virgin OLIVE OIL
First Cold Pressed
32 FL OZ 946 mL
IMPORTED FROM GREECE

BRAGG® ORGANIC COCONUT LIQUID AMINOS SEASONING

A natural and organic soy-free option to traditional soy sauce with healthy flavor! Made from Non-GMO Organic Coconut Tree Nectar from Indonesia and Bali. An excellent gourmet substitute for Tamari, Worcestershire and Soy Sauce. Great in all your Healthy Salads, Soups, Veggies, Rice and Beans, Casseroles, Potatoes, Tofu, Stir-Frys, Meats, Poultry, Fish, Jerky, Tempeh, Marinades, Sauces, most foods, and even delicious on Popcorn.

Coconut Liquid Aminos:

- Certified Organic
- Soy-Free
- NON-GMO
- No Alcohol
- Kosher Certified
- Gluten-Free

CONTENTS

LETTERS TO THE EDITOR 4

GLOBAL NEWS 6
We report on plans for a US military "Space Corps", Wi-Fi risks for diabetics, Japan's commercial whaling law, printing synthetic life-forms, sunscreen toxins, our immune system's "brain", health issues for vaccinated children, the Deep State vs Donald Trump, and more.

A CURE FOR GESTATIONAL DIABETES 15
By Dr Jonathan V. Wright. Women who develop high blood sugar when pregnant have a "weakness" in the enzymes that metabolise tryptophan. They can treat this condition with a simple vitamin supplement.

NEOCONSERVATIVE IMPERIALISM 21
By Paul Fitzgerald and Elizabeth Gould. The US and the UK have a lengthy history of using propaganda to hide their true agendas. Now, the Machiavellian elites are consolidating their takeover of America and are transforming the world into Dante's vision of Hell.

MMR VACCINE SCIENCE IS *NOT* SETTLED 27
By Dr Brian Hooker and the ANH-USA. This critical review indicates that many scientific studies rejecting a link between the measles-mumps-rubella vaccine and autism are flawed and unreliable, reflecting vested interests in "proving" the safety of vaccines.

THE SECRET LANGUAGE OF TREES 37
By Peter Wohlleben. Trees are part of the "wood wide web" and communicate with their own kind and other species using electrical, chemical, visual and even sonic signals. They cooperate and compete, and learn strict lessons as they grow and adapt to their environment.

SCIENCE NEWS: EARTH RADIATION 45
This issue we feature an excerpt from Harald Tietze's 1988 book *Earthrays: The Silent Killer?*, on dowsing and the effects of Earth radiation, plus a summary of studies showing that geopathic stress causes cancer.

THE COSMOVISION OF THE INCAS 50
By Dr Albert Amao Soria. Esoteric writings suggest there was a spiritual connection between the Western Mystery Tradition and the Inca Solar Brotherhood, one which may exist to this day. Has the centre of mystical wisdom moved from the Himalayas to the Andes?

THE UFO CRASH AT AZTEC, NEW MEXICO 59
A leaked classified report, compiled in 1989 by the US Defense Intelligence Agency, describes the retrieval of aliens from a UFO crash site near Aztec, New Mexico, in 1948 and names the scientists involved. It includes conversations with the surviving extraterrestrial being.

STRANGE TIMES: GIANTS IN INDIA 69
By Praveen Mohan. Did a lost race of Giants build the monolithic temple and statues at Lepakshi in Andhra Pradesh? Has information about Giants in our past been suppressed to prevent our learning the truth?

STATEMENT OF PURPOSE
NEXUS recognises that humanity is undergoing a massive transformation. With this in mind, NEXUS seeks to provide 'hard-to-get' information so as to assist people through these changes. NEXUS is not linked to any religious, philosophical or political ideology or organisation.

PERMISSION-TO-REPRODUCE POLICY
While reproduction and dissemination of the information in NEXUS is actively encouraged, anyone caught making a buck out of it, without our express permission, will be in trouble when we catch them!

Global Situation Assessment

Many readers have emailed me, asking for my assessment of the global situation, so this time I'm devoting all of my editorial to highlighting the key points of my perspective.

In the East, a new power is emerging. The Chinese have a technological and an ET-relationship "edge" on the West. China has demonstrated its superiority to the relevant leaders of the West, and all that remains is for the transition to take place. This is what is happening now.

In the West, there are ages-old power factions whose time is coming to an end. And while the top-rung leadership of said factions is going along with the new plan, the rank-and-file power brokers of the lower levels are not happy to lose their castles, their billions and their power. These factions of the West are fighting for the survival of their power base, which is pretty much now the battle to save the petrodollar. And to save the petrodollar, these factions have to control those parts of the Middle East necessary to ensure that their pipelines go through—and that those of their enemies do not.

On one side there are lots of bloodlined but inbred families with their attendant intelligence, banking, arms-manufacturing and media empires. These typically manipulate and control the international voting and military actions of the USA, the UK, Australia, New Zealand, Canada, Denmark, Norway, Japan and South Korea. And as I've said in several interviews, the countries that have been approved to purchase and fly the F-35 Joint Strike Fighter aircraft are essentially the countries that will be on one side of the coming showdown.

These factions of the West are fighting for the survival of their power base, which is pretty much now the battle to save the petrodollar.

On the other side, China is acting as the rallying point for the disgruntled countries, which will likely include Russia, Malaysia and a host of other Asian, South American and African nations.

But how is the transition from West to East to be managed with minimal loss to civilisation and its infrastructure? Neither "side" wants a total or even a partial collapse of civilisation to occur.

To understand the future of humanity, one has to understand our past and our reason for existence. Humans are a modified hybrid life-form, created by a race or races of "non-humans". We were modified for a variety of reasons, all of which served the purposes of non-human civilisations. Think of the Earth as a farm where the more livestock you have, the more value the farm has to everyone involved. When do farmers *ever* need to invade their animals or crops? It doesn't happen! This is why there will never be an alien "invasion" of Earth. "They" have always been here, and it seems to serve their purposes to let their prized animals (us) evolve into smarter and more aware animals. So, if you see what looks like an alien invasion in the near future, it will be a false-flag operation designed to unite humans against a common enemy. Humanity is being "upgraded" by those who created or modified us in the first place.

I just hope that the desired end result is one of a global civilisation that speaks with one voice on behalf of Earth and humanity, and which recognises and respects the sovereignty of its neighbours in space and in other dimensions.

– Duncan

Adapt or die

University Study Report

ENAR® Therapy System

In preserving and evolving Life... One core self-evident principle of Life is ~ *"Adapt or Die"*

Adaptation, changing in response to stimuli, took us as fish from the water onto the land and continues to drive all of us. Moment to moment, now, the nervous, endocrine and other systems respond within us to adapt in real-time to keep us in homeo-stasis (human balance).... and so recreate healthy responses and natural healing.... until they don't....

If your whole body has reached this extreme point, where it has failed to adapt effectively, the systems falter, the heart stops, and unless we are resuscitated, its almost certainly the end of your incarnate human experience....

Unless the most common resuscitation device, the electrical heart defibrillator, gets applied. Medicos at this point use this electro-energetic impulse to "reset electrical fields around the heart" and so jump-start our intrinsic operating systems, our nervous systems, to resume life's real-time adaptive processes. Since electro-energy-adaptation is the self-evident means to sustain much of our health and healing: **Obviously our most ideal way to facilitate healing is to interactively prompt your electro-neuro adaptation!** That's where ENAR comes in to help healing.

ENAR: The Electro Neuro Adaptive Rejuvenator is an Australia therapeutic medical device for both personal and therapist uses. The ENAR device provides a micro electrical stimulation, similar to electro-acupuncture, which **uses a reflex-bio-feedback signal that interactively prompts nerves in the body to respond** and so treat unresolved problems. The ENAR is very easy to apply to the skin, and can be self-used all over the body.

University Research

In Australia, two published university studies, a randomized control trial or RCT at Macquarie, and a post-market surveillance study or PMSS at RMIT, did both indicate ENAR could generate significant, extended results on many chronic painful problems.

The RMIT study comprised 481 patient-user reported cases on the use of the ENAR. Respondents were aged 18 to 88 years (average 56 years).

The primary conditions for which ENAR was used were **painful chronic musculoskeletal complaints,** although a wide range of other types of problems were reported to have been successfully managed with ENAR. **Almost one quarter had used ENAR for problems NOT involving muscles or joints.**

Remarkably, respondents reported an average **reduction in pain of 70%**. They also reported an average functional improvement of 62% using objective rating scales. (RMIT Uni)

www.enar.com.au
www.enar.com.au/research

Case Results Reported

When asked about the uni results, Professor Rod Bonello said *"We'd heard that ENAR could produce a dramatic benefit in some cases, but frankly we were very surprised at how strong the results were in terms of effectiveness and versatility."*

Results were reported to last between hours and years, with the average benefit reported to last a matter of months.

63% rated ENAR therapy effectiveness as giving 'great benefit'.

'Medication reduction' was reported by 91% of respondents who were taking drugs.

Participants were asked to rate the overall effectiveness of ENAR compared to other therapies they had tried. **92% found ENAR therapy superior to their other therapies.**

Almost all respondents (98%) reported positive effects on their primary problem.

BioMat Health Benefits

Dear NEXUS: A few weeks ago, I purchased one of the BioMat crystal mats that you are selling. I did not purchase it for any particular health issue, but more as a background health-improver and especially as a seat-warmer. I spend my working hours in front of a computer at home, so I decided on the half-sized BioMat with plans to sit on it all day. I found that I could only "stand" two to three hours tops at a time before I had to either switch it off or take it off the chair.

After two weeks of one to two hours per day, I noticed two quite profound health effects: first, I found that I did not have to get up at night to go to the bathroom any more (previously I was up two to three times per night), and second, that my haemorrhoids had gone! I wondered if it was the BioMat that had caused these effects, so I looked up the testimonials on their home page and I see I'm not alone.

So here is my testimonial to add to the chorus of happy BioMat customers. My thanks to NEXUS for bringing this to my attention.

Anonymous (name withheld due to embarrassment), Qld, Australia

Solar Panels and Dirty Electricity

Dear Duncan: As people have requested more information since my articles in NEXUS Magazine [24/02, 24/03] highlighted that solar panel technology creates electromagnetic fields (EMF), I want to explain in short that it is not the solar panels themselves but how the technology is delivered that creates EMF. Solar panels use direct current, and the electrical wiring in our buildings uses alternating current. In the conversion process, dirty electricity (DE) is created—unwanted and unusable radio waves (RF EMF) that run along the electrical wiring going into people's homes and along the grid.

Experts are concerned about the magnetic fields from the inverters, recommending that they be placed away from bedrooms or where people spend long periods of time.

The STETZERiZER® meter measures DE in the range of 2 kHz to 150 kHz. It measures from 0 to 1,999, and the figure shows on the screen. When the meter shows a 1, it means that the reading is over 1,999 GS [Graham–Stetzer] units. My STETZERiZER meter measures up to any number.

Last year I measured a house with 17 solar panels in Biggera Waters on the Gold Coast, Queensland, and the reading was over 7,600 GS units. This is an exceptionally high EMF level, considering that the Republic of Kazakhstan mandated in 2003 that workers should not be exposed to more than 50 GS units.

The ground-breaking study of California's La Quinta Middle School cancer cluster showed that if you are exposed to dirty electricity for six hours for 180 days a year, your cancer risk is increased by 25 per cent if you are exposed to above 2,000 GS units and 15 per cent if you are exposed to above 1,000 GS units per year.

At 1.7 kHz, all of this electromagnetic energy dissipates internally in the body and the electrons are excited and start to oscillate at the same rate. Most laptops and computers generate 12.5 kHz to 50 kHz, while printers, photocopiers, PlayStations and most types of electronic equipment generate 10 kHz to 100 kHz. A reading of 36 GS units is roughly 1.7 kHz, which is why 30 GS units or lower is the suggested limit. This is one reason why pregnant women are advised not to use computers and why primary-school-age children's time on computers should be limited. Children now also use wireless devices, another assault.

D. Fisher, Queensland, Australia

Unusual Aerial Sightings

Dear Duncan: It was around 2010. My mother had come out to visit from the UK and I decided to take her to one of the nicest spots, just to sit on the beach and relax. So we drove out to La Balsa Park and walked down the river to Point Cartwright [Sunshine Coast]. It was about 1.00 pm by the time we got there. The tide was out and the beach very quiet as it was mid-week. I found a shady spot under a pandanus tree and Mum got out her book. A couple with a young girl turned up and decided to sit about four metres away on the other side of the tree, and this is how things were for about 30 minutes or so.

I was sitting next to Mum, looking north out to sea, and what seemed like a white plastic bag was being blown in towards the shore. It was only about 10 metres up, and was coming in dead straight for the beach. It cleared the foreshore and was over the beach, moving at about walking pace and almost overhead. That was when I realised that it was not a plastic bag! It was teardrop shaped and appeared to be made of cotton wool. We both had an excellent view of it as it went inland over the top of us. I said it looked like some roofing insulation

that had been blown out to sea, and I thought no more about it.

About 10 minutes later, another object approached from the sea at exactly the same height and speed, on the same path. This one looked like the first but was different. It was denser and was the shape of an infinity sign: two teardrops, one up and one down, joined together and maybe a metre high. We both watched as it went over us, and the family on the other side of the tree watched it as well. We exchanged puzzled glances with them but did not start a conversation.

It was at this point that I realised there was no wind blowing onshore for these two objects to ride upon, and mentioned it to Mum. We both thought it was very strange, and started discussing it in earnest.

About 10 minutes later, a third one came in from the sea—same direction, same speed, but about three metres higher. This one was shaped like the first. Behind where we were sitting was a line of trees and then a steep hill. I thought that this thing was not going to clear the hill at that altitude and that when it crashed I was going to go up there and have a closer look at it and the others which must have landed.

So I walked down the beach to a point where I could turn around and see clearly up the hill behind us. Sure enough, it flew over us all on the beach and then cleared the first lot of trees and looked like it was about to hit a big tree a little further up the hill. As I watched, it reached the tree and suddenly gained height, clearing the tree and the rest of the hill behind it. It flew on, still dead straight, then out of sight.

I walked back up the beach and told Mum what had just happened. We were gobsmacked. The others on the beach heard me talking and realised what had happened.

Sure enough, 10 minutes later another one flew in, teardrop shaped again. The couple near the tree grabbed their little girl, picked up their stuff and hurriedly left the beach. I sat on the beach with Mum and watched these things fly in for a while longer—always the same speed and path, dead straight, but varying heights. We counted at least 10 before we started to feel a bit alarmed and left the beach.

I looked at the map of Point Cartwright when we got home. These things flew in from open water, going roughly south and then over the cliffs and out to sea again on the other side of the point. I saw no ships that they could have been launched from, and I heard no sound at all. Mum was a bit shaken by the experience and not too keen on the idea of ever going back to Point Cartwright.

There is a video on YouTube where a "cloud" touches down and gets stuck in a chicken-wire fence in the Middle East somewhere, and two Arab gentlemen are seen examining it. This is the closest thing to what we saw that I have found anywhere.

Any suggestions as to what they could have been?

Andy, Queensland, Australia

Megaliths of Extraterrestrials?

Duncan: I want to congratulate you on your excellent latest issue of NEXUS Magazine [24/04].

There are two passages in the Erich von Däniken interview that I want to bring to your attention, given that they resonate strongly with information I have received.

Fifth page: "Right now we are changing the *Zeitgeist* because of the understanding we have from all these ancient temples, monuments and writings. This is an acknowledgement that we will have in the next 10 or 15 years."

Sixth page: "The extraterrestrials are observing and studying what sciences we have developed, what kind of religions we have, our languages, what type of bacteria there are, what kind of weapons we have. They are learning about our political systems, our communications systems, and so on. They are learning about all these subjects and they conclude that we as humans are a religious society."

Additionally, I am pleased to see that an advertisement for the noteworthy and prescient book *The New Human: Awakening to Our Cosmic Heritage*, by Mary Rodwell, was included [see review in 24/03].

The reason why I draw attention to these two quotes and the book is because they resonate very strongly with numerous psychic and extraterrestrial experiences that I have had before and during my three decades of visits to hundreds of sacred sites around the world. I think you would find this material of interest, and I'd be glad to share it with you if that is the case.

I do not know how thoroughly you have perused my Places of Peace and Power website, and perhaps you have not seen these two short sections: "The Deeper Meaning" [http://tinyurl.com/ycrgvxzn]; and the final paragraph of my essay about the Sulawesi megaliths [http://tinyurl.com/yaxjj3ok]:

"But is there another avenue of exploration we may conduct to explain this mystery [of the Sulawesi megaliths]? Yes, let us look away from the earth and to the stars. While most university trained archaeologists will scoff at this idea, might it be possible that the Sulawesi megaliths had an extraterrestrial origin? Surely this can be considered. Given the facts that these megaliths are absolutely unique in the world, that their age, source of stone, style of ornamentation, method of transportation and function [are] entirely unknown, perhaps some off-planet explanation is a possibility. Perhaps the enigmatic beings depicted on the stone statues were not human beings but, instead, were scientists or miners from another world in search of gold."

Global News from NEXUS Newsfeed

DOCTORS PRESCRIBE ANTIBIOTICS UP TO 9X HIGHER THAN GUIDELINES

Australian doctors are prescribing antibiotics at a rate up to nine times higher than the current guidelines, according to research published in the *Medical Journal of Australia*.

The five-year study showed that Australian doctors overprescribed antibiotics for acute respiratory infections such as bronchitis, influenza and tonsillitis in the mistaken belief that they were erring on the side of caution.

But in reality, those who leave the doctor's office with a drug that they may not need are contributing to the global resistance to antibiotics. Over four million patients may have received drugs they did not need.

If doctors were to start prescribing antibiotics according to the national guidelines, the number of pills handed out for some conditions would fall by nearly 90 per cent.

Professor Chris Del Mar, from Bond University in Queensland, led the research and said they were taken aback by the results.

"The difference is much bigger than we thought," he said.

USA PREPARES FOR LIMITLESS WAR WITH PROPOSED MILITARY 'SPACE CORPS'

Two top Washington, DC, lawmakers have added a line item to the US National Defense Authorization Act for Fiscal Year 2018 that would create a new Space Corps military branch to specifically address the needs of warfare beyond the Earth's atmosphere.

The proposed legislation would create a Space Corps, to be folded into the military as part of "a separate military service within the Department of the Air Force", according to the proposal. The United States already has Army, Navy, Air Force, Coast Guard and Marine Corps military services.

Robert Orton Work in 2014
(Photo: US Department of Defense)

Mike Rogers (R-AL) and Jim Cooper (D-TN), Representatives within the Strategic Forces Subcommittee (a group in charge of Pentagon operations in space, working under the aegis of the House Armed Services Committee), introduced the legislation that would create a US Space Corps.

In announcing the move, the two lawmakers stated: "There is bipartisan acknowledgement that the strategic advantages we derive from our national security space systems are eroding.

"We are convinced that the Department of Defense is unable to take the measures necessary to address these challenges effectively and decisively, or even recognize the nature and scale of its problems," Rogers and Cooper said, quoted by Theantimedia.com.

Included in the legislation is the acknowledgment that the Space Corps would be under the direction of the US Air Force, similar to how the Marines are under the direction of the US Navy. Unlike the Marines, however, the proposed US Space Corps would have a leader equal to the Air Force Chief of Staff and have a seat with the Joint Chiefs of Staff.

A spokesman for the US Air Force responded to the proposed legislation by downplaying the idea, however, arguing that coordination between the military branches is more important than creating new, separate entities with the Pentagon.

Military futurists, including the current Deputy Secretary of Defense Robert Work, an Obama appointee, are supportive of moving the jurisdiction of the Pentagon into space. At a 2015 conference, Work asserted that the extraterrestrial domain, including the near-Earth planets, the asteroid belt, the gas giants and even the reaches of outer space, must "be considered a contested operational domain in ways that we haven't had to think about in the past".

BLOOD CANCER CURED USING PATIENTS' T CELLS

Chinese doctors have reported success with a new type of immunotherapy for multiple myeloma, a blood cancer: 33 out of 35 patients in a clinical trial had clinical remission within two months.

The researchers used a type of T cell called "chimeric antigen receptor (CAR) T". In a phase 1 clinical trial in China, the patient's own T cells were collected, genetically reprogrammed in a laboratory and injected back into the patient. The reprogramming involved inserting an artificially designed gene into the T-cell genome, which helped the genetically reprogrammed cells to find and destroy cancer cells throughout the body.

The study was presented at the 2017 ASCO [American Society of Clinical Oncology] Annual Meeting in Chicago on 5 June.

"Although recent advances in chemotherapy have prolonged life expectancy in multiple myeloma, this cancer remains incurable," said study author Wanhong Zhao, MD, PhD, an associate director of haematology at The Second Affiliated Hospital of Xi'an Jiaotong University in Xi'an, China.

"It appears that with this novel immunotherapy there may be a chance for cure in multiple myeloma, but we will need to follow patients much longer to confirm that," Dr Zhao added.

According to ASCO expert Michael S. Sabel, MD, FACS: "While it's still early, these data are a strong sign that CAR T-cell therapy can send multiple myeloma into remission. It's rare to see such high response rates, especially for a hard-to-treat cancer. This serves as proof that immunotherapy and precision medicine research pays off. We hope that future research builds on this success in multiple myeloma and other cancers."

The researchers plan to enrol a total of 100 patients in this continuing clinical trial at four participating hospitals in China.

"In early 2018 we also plan to launch a similar clinical trial in the United States. Looking ahead, we would also like to explore whether BCMA [B-cell maturation antigen] CAR T-cell therapy benefits patients who are newly diagnosed with multiple myeloma," said Dr Zhao. *(Source: KurzweilAI.net, 7 June 2017, http://tinyurl.com/y87jzuol)*

JAPAN PASSES LEGISLATION TO RESUME COMMERCIAL WHALING PROGRAM

Japan has passed a new law, enshrining the practice of whaling as a "national responsibility", and is considering upgrading its fleet of vessels in a step towards returning to the controversial activity of commercial whaling.

The new legislation was passed in June 2017 in Japan's Parliament.

Kyoshi Ejima, a member of the Upper House who voted in favour of the legislation, described whales as "a great source of food" and said that Japan could become a self-sustaining food nation if commercial whaling were allowed to resume.

In 1986 the International Whaling Commission introduced a moratorium on commercial whaling, and the following year Japan commenced its program of scientific whaling.

Shigeki Takaya, Director of the Whaling Affairs Office at Japan's Fisheries Agency, said that the country would soon recommence its commercial whaling program.

The new law will allocate ¥5 billion (about A$58 million) every year to the whaling program. Until now, the amount spent on whaling in Japan has come from funding for the Fisheries Agency more broadly.

Shigeki Takaya said that the agency intends to undertake this year's research program in the Southern Ocean. When it comes to public response, Takaya noted that he is prepared for the negative reaction that Japan's new whaling legislation is likely to bring, particularly in Australia.

Japanese whalers capture a minke whale in the Southern Ocean in 2008. (Photo: Australian Customs and Border Protection Service)

Nanami Kurasawa, Secretary-General of the Iruka & Kujira (Dolphin & Whale) Action Network, said the argument that there is demand for whale meat in Japan is false and there is no justification for killing whales for research. "It's clear that this industry cannot stand on its own two feet without government subsidy," she said. *(Source: ABC.net.au, 7 July 2017, http://tinyurl.com/ybb8ujtj)*

WI-FI RAISES BLOOD GLUCOSE AND TEMPERATURE

A new paper on wireless radiation and diabetes shows that radiation from wireless technology elevated blood glucose and body temperature in a test subject.

This is from the paper's abstract:

"A type 1 diabetic male reports multiple instances when his blood glucose was dramatically elevated by the presence of microwave radiation from wireless technology and plummeted when the radiation exposure ended. In one instance, his body temperature elevated in addition to his blood glucose. Both remained elevated for nearly 48 h after exposure with the effect

gradually decreasing.

"Possible mechanisms for microwave radiation elevating blood glucose include effects on glucose transport proteins and ion channels, insulin conformational changes and oxidative stress. Temperature elevation may be caused by microwave radiation–triggered Ca^{2+} efflux, a mechanism similar to malignant hyperthermia.

"The potential for radiation from wireless technology to cause serious biological effects has important implications and necessitates a reevaluation of its near-ubiquitous presence, especially in hospitals and medical facilities."

The paper was published online on 19 May 2017 in *Electromagnetic Biology and Medicine*.

PRINTING SYNTHETIC LIFE-FORMS ON DEMAND

In 2016, US biologist J. Craig Venter, PhD, founder of the J. Craig Venter Institute, achieved something extraordinary. He built a new species of bacteria from scratch in the lab: the simplest genetic life-form known to science, made entirely through chemical synthesis of a custom-made genome.

Now, Dr Venter, together with Synthetic Genomics, Inc. in La Jolla, California, has unveiled a new machine that could print these synthetic life-forms on demand by simply feeding in a genomic design and letting the "ink" form the building blocks of life.

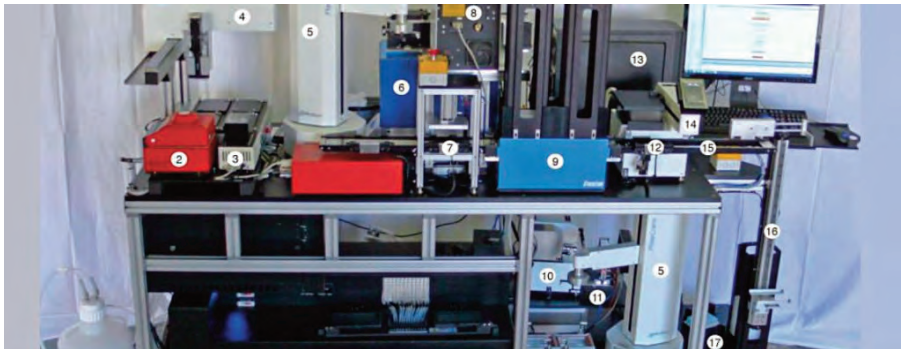
The invention could see us colonise Mars with synthetic life without ever setting foot on the Red Planet, and Craig Venter and Elon Musk have teamed up to make this happen. Called "biological teleportation", the technique could allow scientists to email the genome from Earth to a printer on Mars, theoretically allowing us to colonise the Red Planet from afar.

"I think biological teleportation is what is going to truly enable the colonization of Mars," Venter told Musk's biographer, Ashlee Vance, back in 2015. "Elon and I have been talking about how this might play out."

The new tabletop prototype, called the Digital-to-Biological Converter (DBC), is the first machine that can receive genetic sequences via the Internet or radio waves. This means that it can print the four chemical bases of DNA—guanine, thymine, cytosine and adenine (G, T, C and A)—via remote control to form biological components.

"Just like a printer, it needs cassettes, but instead of colours it's bottles of chemicals," Venter told Jordan Pearson at Motherboard. "It's packaging complex biology that each of our tiny cells do remarkably well at a much, much smaller scale."

Venter has been working on this prototype for years now, but a new study describes how it's finally been able to produce biological compounds such as DNA templates, RNA molecules, proteins and viral particles without any human intervention.



The DBC prototype (Photo: from Kent S. Boles *et al.*, *Nature Biotechnology*, published online on 29 May 2017, http://tinyurl.com/yc8646vs)

The printer has also made functional influenza viral particles (H1N1) and bacteriophages that can fight bacterial infections. In the near future, it could print things like food, vaccines and simple bacterial forms—and maybe, some day, something far more complex.

Venter's machine is described in *Nature Biotechnology* [see caption].

"Having alien species being beamed back here and being recreated does sound like science fiction but it is potentially real," Venter told the *Guardian* in 2013 when he was still developing the DBC prototype.

Even if Venter's dream of depositing a couple of these machines on the Martian surface is likely many years away, due to the feasibility of lugging them 206 million kilometres though space, the idea of synthetic life on Earth might be something we're going to have to get used to pretty soon.

In 2016, Venter's team managed to produce a species of bacteria in the lab with just 437 genes—the absolute minimum of genetic code needed to support life (as far as we know). For comparison, the shortest genome in a self-sustaining organism found in nature is 525 genes long and belongs to *Mycoplasma genitalium*.

In January 2017, a separate team of scientists, at The Scripps Research Institute in La Jolla, announced that they had successfully produced the first-ever six-letter genetic code and used it to build "semisynthetic" organisms.

"This SSO [semisynthetic organism] constitutes a stable form of semisynthetic life, and lays the foundation for efforts to impart life with new forms and functions," the Scripps team reported.

New life-forms are coming. Let's hope that Earth and Mars are ready for them.

SUNSCREENS BREAK DOWN INTO TOXIC COMPOUNDS IN WATER AND UV LIGHT

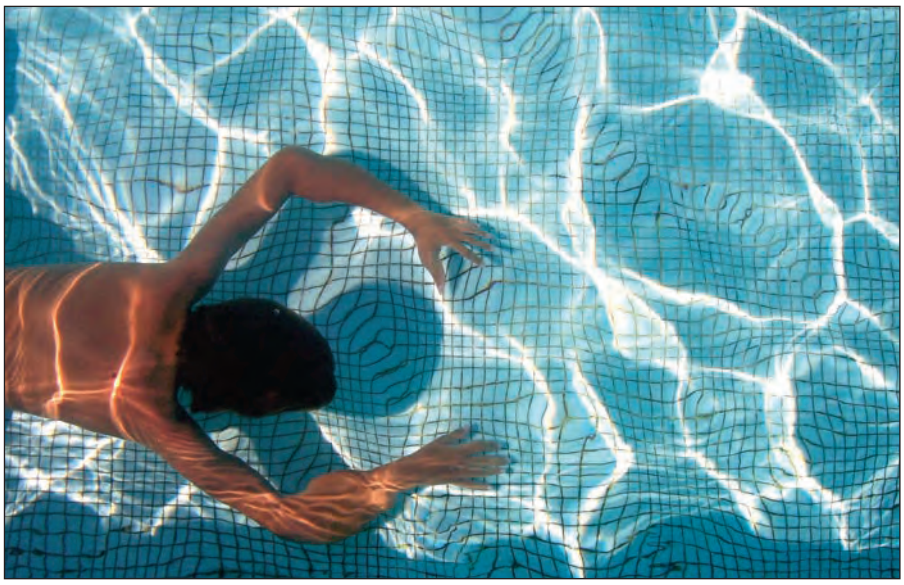
Scientists from the Faculty of Organic Chemistry at Lomonosov Moscow State University, and elsewhere, have found that hazardous chemical compounds form as a result of the breakdown of avobenzone, a component used in many sunscreen products, when it interacts with chlorinated water and ultraviolet radiation. The chemists have presented their results in the journal *Chemosphere* [182:238-44].

The scientists simulated real-world situations where sunscreen, applied on the skin, comes into contact with the water in swimming pools, and they discovered that the breakdown of avobenzone can take place on wet skin. They found that avobenzone breaks down in the water, forming various organic compounds belonging to classes of aromatic acids and aldehydes, phenols and acetyl benzenes.

Dr Albert Lebedev, one of the study's authors, said: "On the basis of the experiments, one could make a conclusion that a generally safe compound transforms in the water and forms more dangerous products. In spite of the fact that there are no precise toxicological profiles for the most established products, it's known that acetyl benzenes and phenols, especially chlorinated ones, are quite toxic.

"Studying the products of transformation of any popular cosmetics is very important as very often they turn out to be much more toxic and dangerous than their predecessors. In principle, bas[ed] on such research, one could obtain results which could restrict or even put under a ban the usage of one or another product and preserve [the] health of millions of people."

At the moment, the scientists are studying the transformation of avobenzone under conditions of chlorination and bromination of freshwater and seawater. During chlorination or bromination of



seawater, the number of breakdown products of avobenzone will be even greater. And if water contains copper salts (added to swimming pools to obtain the nice light-blue colour), then bromoform is formed in large quantities. This substance could provoke dysfunction of the liver and kidneys along with nervous system disorder.

SOUND WAVES CAN DIRECT PARTICLES TO SELF-ASSEMBLE, SELF-HEAL

A study, published online on 19 June in the journal *Nature Materials*, could help address fundamental questions about energy dissipation and how it allows living and nonliving systems to adapt to their environment when they are out of thermodynamic equilibrium.

"Dynamic self-assembly under non-equilibrium is not only important in physics, but also in our living world," said Professor Xiang Zhang, corresponding author of the paper and a senior faculty scientist at the Lawrence Berkeley National Laboratory's Materials Sciences Division. "However, the underlying principles governing this are only partially understood."

The study's co–lead author, Dr Chad Ropp, a postdoctoral researcher in Zhang's group, said: "We show that individually 'dumb' particles can self-organize far from equilibrium by dissipating energy and emerge with a collective trait that is dynamically adaptive to and reflective of their environment."

Notably, after the researchers intentionally broke up the particle party, the pieces would reassemble, showing a capacity to "self-heal".

As the sound waves travelled at a frequency of 4.0 kilohertz [kHz] , the scattering particles moved along at about one centimetre per minute. Within 10 minutes, the collective pattern of the particles emerged, where the distance between the particles was surprisingly non-uniform. The researchers found that the self-assembled particles exhibited a phononic bandgap—a frequency range in which acoustic waves cannot pass—whose edge was inextricably linked, or "enslaved", to the 4.0-kHz input.

"This is a characteristic that was not present with the individual particles," said another co–lead author, Dr Nicolas Bachelard, also a postdoctoral researcher in Zhang's group. "It only appeared when the particles collectively organized, which is why we call this an emergent property of our structure under non-equilibrium conditions."

EPA-FUNDED RESEARCH LAB ACCUSED OF FAKING DATA ON RESPIRATORY ILLNESS

Duke University in Durham, North Carolina, has admitted that it used manipulated and completely fabricated data about respiratory illnesses to obtain grants from the US Environmental Protection Agency (EPA), among others.

Internal investigators believe that former laboratory technician Dr Erin Potts-Kant falsified or fabricated data for medical research reports, said attorneys for Duke in response to a federal whistleblower lawsuit against the School of Medicine lab.

Potts-Kant told investigators that she'd faked data that wound up "included in various publications and grant applications".

Former Duke laboratory research analyst Joseph Thomas alleged in a lawsuit that the university ignored warning signs about Potts-Kant's work and tried to cover up the fraud, but the university denies that there were warning signs. The lawsuit contends that all the work that Potts-Kant did in her eight years at Duke was fabricated, and that the bogus research was done through grants worth US$112.8 million to Duke and $120.9 million to other North Carolina universities.

Investigators reviewed 36 research reports and found that in many cases she'd simply made things up. She admitted that she "generated experiment data that was altered" and "knew the altered experiment data was false", according to information offered on her behalf by North Carolina lawyer Amos Tyndall.

Potts-Kant worked in the laboratory of Professor W. Michael Foster, who received a $7.7-million grant from the EPA in 2007 to determine whether maternal exposure to airborne particulates can impair lung development/function in newborn mice. The project was part of an EPA environmental justice program.

A study by veteran statistician Dr S. Stanley Young *et al.* found "little evidence for association between air quality and acute deaths" in California between 2000 and 2012. "The daily death variability was mostly explained by time of year or weather variables. Neither $PM_{2.5}$ [particulate matter with a diameter less than 2.5 μm] nor ozone added appreciably to the prediction of daily deaths," noted Young *et al.* in their peer-reviewed study, published online in *Regulatory Toxicology and Pharmacology* on 13 June.

Young had tried to have his research published in *PLOS ONE* in July 2015, but the journal rejected the paper, pointing to the EPA's research showing the relationship between air pollution and respiratory illness.

OUR IMMUNE SYSTEM HAS 'BRAIN-LIKE' ACTIVITY

Scientists at the Australian National University (ANU) in Canberra have led the discovery of brain-like activity in the immune system—something they believe promises better treatments for lymphoma, autoimmune diseases and immunodeficiency disorders.

Lead researcher Dr Ilenia Papa said the research confirmed for the first time that human immune cells contain particles that have neurotransmitters including dopamine, which plays a crucial role in immune responses.

"These particles were previously thought to only exist in neurons in the brain and we think they are, potentially, an excellent target for therapies to speed up or dampen the body's immune response, depending on the disease you're dealing with," said Dr Papa, from The John Curtin School of Medical Research at ANU.

Neurons rely on synaptic interactions and neurotransmitters such as dopamine, which are small molecules transmitted across synapses to deliver signals from one cell to another that play a major role in reward-motivated behaviour.

"Like neurons, specialised T cells transfer dopamine to B cells that provides additional 'motivation' for B cells to produce the best antibodies they can to help to clear up an infection," Dr Papa said.

"The human body has developed an advanced form of protection against bacteria, viruses and other foreign bodies that relies on the immune system. Immune responses are essential for recognising and defending humans against substances that appear foreign and harmful to the individual."

The study, published in *Nature* [see http://rdcu.be/t9ol], involved a collaboration with other researchers in the UK, Italy, Australia, the USA, Germany and China.

COMPARATIVE STUDY SHOWS HUGE HEALTH DIFFERENCES BETWEEN VACCINATED AND UNVACCINATED CHILDREN

In a development that parents of autistic children have been looking forward to for a long time, the first peer-reviewed study comparing total health outcomes in vaccinated and unvaccinated children was released online on 3 May.

According to sources close to the project, the study had been reviewed and accepted by two different journals, both of which pulled back on their approval once the political implications of the findings had become clear. That's largely because, as parents have long expected, the rate of autism is significantly higher in the vaccinated group—a finding that could shake vaccine safety claims, soon after the first US President who has ever stated a belief in a link between vaccines and autism took office.

Working in partnership with the National Home Education Research Institute, Dr Anthony Mawson led the research team that investigated the relationship between vaccination exposures and a range of over 40 acute and chronic illnesses in home-schooled children, a population chosen for its high proportion of unvaccinated children.

The study found that vaccinated children were significantly more likely than the unvaccinated to have been diagnosed with a neuro-developmental disorder. Most notably, the risk of being affected by an autism spectrum disorder (ASD) was 4.7-fold higher in vaccinated children; attention deficit hyperactivity disorder (ADHD) risk was 4.7-fold higher; and learning disability risk was 3.7-fold higher.

Vaccinated children were also significantly more likely to be diagnosed with an immune-related disorder. The risk of allergic rhinitis (hay fever) was over 30 times higher in vaccinated children; the risk of other allergies 3.9-fold higher and the risk of eczema 2.4-fold higher.

With respect to acute illness and infectious disease, the outcomes were in some respects surprising. As might be expected, the unvaccinated children were significantly (4–10 times) more likely to have come down with chicken pox, rubella or pertussis. Perhaps unexpectedly, the unvaccinated children were less likely to suffer from otitis media and pneumonia: vaccinated children had 3.8-times greater odds of a middle ear infection and 5.9-times greater odds of a bout with pneumonia.

These findings in a population of 666 children, 261 (39 per cent) of whom were unvaccinated, are sure to stir controversy, in part because this study is the first of its kind. The scientific literature on the long-term effects of the vaccination program is virtually silent. Most studies on the safety of vaccines only consider immediate or short-term effects.

There was no obvious explanation for the differences in health outcomes observed between the vaccinated and the unvaccinated groups of children other than the vaccination itself.

The finding that vaccination is a significant risk for autism is the most explosive finding in the paper. For well over a decade, parents concerned that vaccines were involved in autism's sharp rise have been calling for what has long been labelled the "vax–unvax" study.

Public health officials such as Paul Offit have resisted these calls with claims that a comparative study of autism risk and other health outcomes in unvaccinated and vaccinated children would be *retrospectively impossible and prospectively unethical*.

In 2007, Generation Rescue (one of the Mawson study's sponsors) retained a market research firm to undertake a similar survey (it is available online and had similar findings but was never published in a scientific journal).

Less formal surveys focusing on whether or not autism was present in the unvaccinated have also been undertaken in unusual populations, including the Amish and patients of alternative health practitioners.

Age of Autism investigated autism in the Amish, who tend to have less-frequent vaccinations. Autism is rare among the Amish, and the only autistic Amish children we discovered had been vaccinated.

In the absence of any published evidence on the question, the call for a vax–unvax study has become a rallying cry for autism study advocates. Now, it appears, the results confirm what many have long suspected. These findings, especially the significant link between autism risk and vaccination, are certain to increase pressure on public health officials inside and outside the government to acknowledge the legitimacy of a concern they have long dismissed. *(Source: AgeOfAutism.com, 4 May 2017, http://tinyurl.com/nx7dm3r)*

THE DEEP STATE, NOT TRUMP, CONTROLS THE USA

On 25 June, veteran journalist Seymour Hersh released a bombshell article revealing a number of facets regarding the alleged chemical attack in Khan Sheikhoun [Shaykhun], Syria, and the resulting volley of Tomahawk missiles that were fired by the USA at the Shayrat Airbase in response.

Hersh's article provides the reader with what many of us already knew and wrote about at the time, i.e., that the Syrian military did *not* conduct a chemical weapons attack and that the US was fully aware of that fact. Still, the US government opted to use the attack as a justification for launching 59 Tomahawk missiles at a Syrian airbase that resulted in the deaths of Syrian soldiers, civilians and children from the nearby village.

Hersh's article shows that not all key personnel were on board with the decision to launch Tomahawk missiles at Shayrat or even with the whole Syria–Iraq mission. Most notably, it reveals that there is a "secret agenda" moving forward in regard to Syria, Iraq and Russia. Hersh's article also points to the US President as the individual who made the decision to launch attacks in Syria, against the advice of the military and intelligence community.

While much of this information is already well known, it bears closer scrutiny to understand and unearth what is really going on behind the scenes in the US government.

In "Trump's Red Line", Hersh writes: "On April 6, United States President Donald Trump authorized an early morning Tomahawk missile strike on Shayrat Air Base in central Syria in retaliation for what he said was a deadly nerve agent attack carried out by the Syrian government two days earlier in the rebel-held town of Khan Sheikhoun. Trump issued the order despite having been warned by the U.S. intelligence community that it had found no evidence that the Syrians had used a chemical weapon.

"The available intelligence made clear that the Syrians had targeted a jihadist meeting site on April 4 using a Russian-supplied guided bomb equipped with conventional explosives. Details of the attack, including information on its so-called high-value targets, had been provided by the Russians days in advance to American and allied military officials in Doha, whose mission is to coordinate all U.S., allied, Syrian and Russian Air Force operations in the region…"

Hersh presents a picture of Trump as a reactionary and narcissistic watcher of television news, anxiously waiting to be seen as a hero or at least the focus of attention. He writes essentially that Trump saw reports of the deaths of civilians in Khan Sheikhoun and made the decision right then and there to bomb Syria—a decision that he stuck to, even after all the intelligence surrounding the chemical attack had been shown to him and it had been demonstrated that the Syrian government did not use chemical weapons.

According to Hersh, the intelligence community, the military and the national security team were all frightened that the reckless Trump would push us into World War III and thus they sought to guide him into launching an attack that showed force but wasn't enough to actually create the pretext for Armageddon.

Hersh paints a picture that shows a military and intelligence community telling the Russians before the missiles were launched so that a confrontation could be avoided.

No one truly doubts that the US military and intelligence community knew all along that the Syrian government did not use chemical weapons at Khan Sheikhoun. The track record of Western powers and their proxy terrorists in Syria is enough to raise serious doubt as to who used the weapons, and Assad, as smart as he is, is not likely to use chemical weapons on a strategically insignificant area in front of the world and cross one of America's many stupid "red lines". Not only that, Hersh's article is confirmation that the Russians alerted the US military as to what was going to happen days in advance.

So, of the questions that immediately crop up, almost all surround Trump himself. How much did Trump actually know? Was he told that the attack never happened? Did he actually make the decision himself to launch missiles? Was Trump really the only person who wanted to bomb Syria? Does Trump really have that much authority? Was Trump influenced to bomb Syria? Was he forced? And what of the networkers who made the issue a "chemical attack by the brutal dictator Assad"? Were they cowering in the corner, afraid of Trump's choices, or were they actually doing something?

And how much authority and sway does Trump actually have over his own policies? This is an important question since a number of Trump's

promises on the campaign trail did carry over into his election, only to be scuttled by some unseen force behind closed doors. Remember, Trump's tough stance on Saudi Arabia, his desire for a closer relationship with Putin and his desire to back away from NATO all started taking shape early on in the Trump administration, but the President did an abrupt 180-degree turn. Suddenly, Trump was provoking World War III and praising NATO and Saudi Arabia.

Presidents backing away from campaign promises is one thing. Presidents realising that they have no power upon being elected is quite another. I would suggest that we are witnessing the latter, with the requisite and expected dose of the former. Trump has likely found himself in the same situation as JFK: allowed to assume the role of the presidency due to his own ignorance and willingness to play ball and incriminate himself in his personal life, only to realise that upon becoming President he is surrounded by enemies on all sides, sharpening their knives if he dares get out of line.

And what of Hersh's revelation that the Russians told the Americans about the Syrian military's operation beforehand? While not heavily discussed, it is incredibly important. Giving the US notice that the Syrian military would be dropping a bomb on this facility would then give the US time to organise an impromptu White Helmets propaganda production, possibly even loading the chemicals into the building shortly before the bombing. This would explain the White Helmets' ability to arrive immediately on the scene with cameras blazing, in time to catch great video of all the "chemical weapons victims".

It is also important to note the role of the Western corporate media here. Hersh is apt to point out the role that they played in creating an environment of fear, panic and anger at the horrors in Syria being shown to the American public and blamed on Assad. The corporate media blamed Assad from the very moment that the first report was aired, which created an environment of pressure on Trump to "do something". Trump had to respond to the incident somehow.

Unfortunately, in warmongering America, simply stating the facts that Assad didn't do it isn't good enough, as right- and left-wingers are already frothing at the mouth, demanding that someone be killed and Syria be invaded regardless. Of course, Trump should have done just that: stated Assad's innocence. But Trump, being what he is, didn't.

...the US establishment knew that there was no chemical weapons attack, and the corporate media, at best, knew there was no evidence of an attack.

What is most likely here is not the situation that Hersh presents. It is more likely that the US military and intelligence apparatus colluded with their corporate media department, and capitalised on this incident and Trump's narcissism and perceived political necessity. It is more likely that "advisers" like Trump's rabidly Zionist son-in-law, who has been given frightening levels of access to the President and the government in an official capacity as Trump's senior adviser, simply told the President that launching missiles was what he was expected to do by the Deep State, so Trump complied.

In this regard, Hersh's article is possibly a "limited hangout" operation, not on the part of Hersh but on the part of intelligence community operatives who wish to do more damage to the President's public support and his ability to act independently of the Deep State. They are able to announce the tragic, massive fraud of Khan Sheikhoun while looking like the level heads and the good guys of the situation. Trump, of course, comes off looking like the lone assassin, the lone madman so eaten up with narcissism that he is putting the country at risk.

What is clear, however, is that the US establishment knew that there was no chemical weapons attack, and the corporate media, at best, knew there was no evidence of an attack. Still, the narrative was peddled continually through every mainstream media outlet in America and the West; the strike was ordered and carried out. In this sense, the personal involvement or responsibility of Donald Trump is a red herring.

It is and always was the Deep State that has been in control of foreign (and domestic) policy initiatives. It is merely the carrying out of a plan set in motion long ago, written about in the early 1980s, again in the 1990s and once again in the plans of the Project for the New American Century. It has been discussed at various corporate financier think-tanks and openly at globalist and Zionist confabs. The Presidents of the United States have changed numerous times over the past few decades, but this agenda has always moved forward without so much as a hiccup—except perhaps for the damaged reputation of the President.

It is fashionable and trendy in the American media today to take swipes at Donald Trump, and it is even considered a necessity in some areas of discourse before any other statements can be made. However, America has a much bigger problem than Trump and it is becoming more and more obvious by the day. If the Deep State apparatus is not exposed and neutered soon, we may very well find ourselves in a Third World War.

Prevent and cure gestational diabetes

...and Lower Your Child's Risk of Autism

Photo: Africa Studio, shutterstock.com

- In two 1970s research studies, 86% and 100% of women with gestational diabetes normalised their blood sugar in two weeks by taking vitamin B_6
- Xanthurenic acid (XA), a tryptophan metabolite, is high in serum in gestational diabetes
- Xanthurenic acid binds insulin, impeding its action
- Vitamin B_6 lowers xanthurenic acid levels to normal
- Gestational diabetes increases autism risk for the unborn child; vitamin B_6 eliminates that extra risk

by Jonathan V. Wright, MD © 2016–2017

If you are a pregnant woman who never had any sort of diabetes before becoming pregnant and have gone on to develop high blood sugar (gestational diabetes) only *after* becoming pregnant, you can safely eliminate this within two to three weeks all by yourself. You may have the remedy at home already. If not, taking a trip to your favourite natural food store or compounding pharmacy, or maybe even going online to order from the Tahoma Clinic Dispensary or another source, will equip you to eliminate gestational diabetes almost every time. Of course, if you're a man, you'll never have this problem. However, your wife, sister or daughter may, so keep this information in mind in case it's ever needed.

One of the reasons why gestational diabetes should be eliminated as rapidly as possible was discovered recently, and a study was published in April 2015 in the *Journal of the American Medical Association*. What is this reason? Autism! The US researchers wrote that "exposure to maternal GDM [gestational diabetes mellitus] diagnosed by 26 weeks' gestation was associated with risk of ASD [autism spectrum disorders] in offspring".[1] Yes, that's extra risk for the child of developing autism.

But even though the blood and urine sugar level is higher than normal in those with gestational diabetes, gestational diabetes is *not* type 2 or even type 1 diabetes mellitus. To make this point clear, gestational diabetes should be renamed "diabetes mellitus xanthurenica" to identify its cause: excess serum xanthurenic acid. With

When blood sugar is too high, type 2 diabetes is diagnosed.

this renaming, even conventional medicine might quit treating gestational diabetes with a "diabetic diet" and insulin, and might instead actually *treat the cause*.

Here's what WebMD says is the cause of gestational diabetes:[2]

"During pregnancy, the placenta…releases hormones that help your baby grow. Some of these make it harder for your body to make or use insulin. This is called insulin resistance…

"To keep your blood sugar levels steady, your pancreas has to make more insulin—as much as three times more than usual. If it can't make enough extra insulin, your blood sugar will rise and you'll get gestational diabetes."

And here's what the American Diabetes Association (ADA) tells women:[3]

"…Treatment for gestational diabetes always includes *special meal plans and scheduled physical activity*. It may also include daily blood glucose testing and insulin injections."

Let's send a note to WebMD and the ADA: "Read the medical research!"

The Real Cause of Gestational Diabetes

Gestational diabetes was well researched between the 1940s and 1975, when a report[4] summarised the earlier research and then explained that gestational diabetes is caused by excessive amounts of xanthurenic acid, which is usually present in the blood in very low levels. All this xanthurenic acid combines with insulin molecules and blocks the insulin's activity. The xanthurenic acid–insulin complex can't activate insulin receptors nearly as well as insulin alone does, and blood sugar rises.

Back to the causes of type 2 and type 1 diabetes mellitus. In type 2, the cause is overproduction of insulin in response to carbohydrates (and dairy, but I'll give an explanation for this at another time). As explained in *Green Medicine*, March 2016, overproduced, chronically high insulin causes insulin resistance, which in turn leads to even more insulin secretion to overcome that resistance, which leads to even more insulin secretion. This back-and-forth, upward-trending interplay (that is, more insulin, more resistance, even more insulin, even more resistance, and so on) goes on and on (unless "carbs", and dairy, are significantly restricted) until the insulin resistance is so strong that it can't be completely overcome no matter how much insulin there may be. Blood sugar then goes too high—and it's diagnosed as type 2 diabetes. This known cause of type 2 diabetes is very different from the cause of diabetes mellitus xanthurenica.

The cause of type 1 diabetes is much simpler. For a variety of reasons, the insulin-producing cells (islet cells) become weak and then die. When this happens, insulin levels go lower and lower until there's very little insulin or even none. This is type 1 diabetes. Again, this is a very different cause compared to what causes diabetes mellitus xanthurenica.

Doesn't everyone's body chemistry make xanthurenic acid? (It's a metabolite of tryptophan.) Indeed, 100 per cent of us have this body chemistry. So why don't we all have gestational diabetes even if we're not pregnant or even women? The reason is that levels of xanthurenic acid are relatively low in most of us (unless we're deficient in a certain B vitamin, to be named later), so not very much of the xanthurenic acid–insulin complex is formed.

Pregnant women who develop gestational diabetes have "weakness" in the enzymes that metabolise tryptophan…

What's different during pregnancy? Among other things, it's a combination of "genetic" causes together with those really high levels of oestrogen that women's bodies make when pregnant—way, way more than when not pregnant. But why does all that extra oestrogen cause only a minority of women's bodies to make lots more xanthurenic acid and develop gestational diabetes when most women's bodies don't do that?

This is the "genetic" part. Pregnant women who develop gestational diabetes have "weakness" in the enzymes that metabolise tryptophan into serotonin and melatonin, but have no weakness in the enzymes that metabolise tryptophan into xanthurenic acid. These enzymes, without the pregnancy levels of oestrogen "putting pressure" on them, perform as they do in most women—metabolising much less of their tryptophan into xanthurenic acid and much more of it into many other molecules including serotonin and melatonin.

With the high levels of oestrogen during pregnancy, the weak enzymes falter and they metabolise much more tryptophan than usual into xanthurenic acid and much less into melatonin, serotonin and related molecules. If there's much more xanthurenic acid, there's much more xanthurenic acid–insulin complex formed and greater impairment of insulin activity. With enough insulin impaired, gestational diabetes is the result.

A Simple Treatment Protocol

But a woman can't stop being pregnant (for many months, anyway), and she definitely can't change her genetics, so she can't really rid herself of gestational diabetes and return to normal blood sugar levels (while reducing her baby's risk of autism, too) within two to three weeks. Or can she?

Yes, she can! To understand how, here is a refresher on what many of us learned—or should have learned—in high school and college chemistry about how enzymes change one molecule into another. The important fact is that enzymes never work alone. They're always aided by co-factors that are almost always "essential" (necessary to life) vitamins and minerals. Without these co-factors, the enzymes can't function and ultimately we die. That's why they're defined as "essential" nutrients.

Pyridoxal 5'-phosphate is the active form of vitamin B_6.

"Weak" enzyme function can often be strengthened by adding more co-factors. A key co-factor for the enzymes that metabolise tryptophan into serotonin and melatonin is vitamin B_6. Following are the results that women with gestational diabetes achieved by taking extra vitamin B_6 to strengthen their genetically "weak" enzymes.

In 1975, 14 pregnant women were diagnosed with gestational diabetes by the standard glucose tolerance test. All the women took 100 milligrams daily of vitamin B_6 (as pyridoxine) for two weeks. Repeat testing found that 12 of the 14 women (86 per cent) no longer had the problem.[5]

To Eliminate Gestational Diabetes, Use Pyridoxal 5'-Phosphate, Not Pyridoxine.
Don't use the "pyridoxine" form of vitamin B_6. This is the "inactive" form of vitamin B_6, which does not activate the receptors for this vitamin. Most, but not all, humans can "activate" pyridoxine, but you have no way of knowing (without testing) if you are in the pyridoxine-activating group or not. (It's quite possible that the 14 per cent of women whose gestational diabetes didn't disappear in the 1975 research summarised here were "poor activators" of pyridoxine.) To make sure that the pyridoxine actually does its job, it's best to use the "active" form, pyridoxal 5'-phosphate (P5P), fortunately available nearly everywhere that supplements are sold, usually in a 50-milligram size. Don't stop using your pregnancy multivitamin–mineral supplement, as it contains the rest of the B-complex vitamins which back up the pyridoxal 5'-phosphate.

In 1977, a different team of researchers reported almost identical results for 13 women in the same time period.[6] All of the women took 100 milligrams per day of vitamin B_6 (as pyridoxine). Glucose tolerance tests were done before and after. All 13 women (100 per cent) had "statistically significant" improvements in their glucose tolerance tests. The researchers wrote:

"The low vitamin B_6 levels appear to alter metabolic pathways which result in a lowering of the biologic activity of endogenous insulin."

This means that vitamin B_6 strengthened specific weak enzymes so that less xanthurenic acid was available to be "complexed" with insulin, blocking its activity. Better blood sugar control was regained.

The 1975 and 1977 research was actually done more than two decades *after* several groups of researchers[7–10] had confirmed in the early 1950s that vitamin B_6 returned levels of xanthurenic acid to normal. For the technically inclined, all of the 1950s research and much more was reviewed in a 1961 publication[11] which confirmed that pyridoxine lowers xanthurenic acid.

And one last fact: textbooks of laboratory medicine in the 1940s told us that higher-than-usual xanthurenic acid in urine is diagnostic for vitamin B_6 deficiency. Yet despite this 40–70-year-old basic science and clinical research that demonstrates the cause *and cure* of gestational diabetes, the findings are still not being applied.

If you want to prevent gestational diabetes or cure yourself of it, you can apply this extensive science. You can safely prevent or cure gestational diabetes yourself, and at the same time reduce your child's risk of autism.

Check with your natural medicine doctor if you have any doubts at all about doing this protocol.

A P5P Tapering Schedule

Vitamin B_6 in both forms can inhibit the production of prolactin[12], the hormone necessary for normal lactation and nursing. So, towards the anticipated delivery date, it's suggested that you work with a physician skilled and knowledgeable in natural and nutritional medicine to help you determine (possibly while checking your blood sugar level) a pyridoxal 5'-phosphate (P5P) "tapering schedule" so you can then nurse your child normally. This natural medicine physician will also be able to tell you about botanicals used for centuries to improve lactation, should they be needed. ∞

Author's Note:

A special thank-you to author Adelle Davis, whose description of the research findings in endnote no. 4 has helped me to help women reverse their gestational diabetes for more than 30 years.

About the Author:

Jonathan V. Wright, MD, established Tahoma Clinic in 1973 in Washington State, USA, to offer nutritional and other natural therapies instead of patent medications for common health conditions. A long-time researcher, author, speaker and clinician, Dr Wright since 1983 has educated physicians in his techniques. Dubbed "The Father of Bio-identical Hormones" by his peers, he was the first physician in the USA in the early 1980s to prescribe comprehensive hormone replacement therapy with hormones identical to those found in nature, a therapy now used by millions. He has written 13 books and numerous medical articles, and from 1976 to 2000 he wrote monthly magazine columns. Since 1994, he has written a popular monthly newsletter.

Dr Wright's article titled "Eliminating Osteoarthritis Pain with Niacinamide" was published in NEXUS 24/04.

Neoconservative Imperialism: the descent into Dante's Hell

by Paul Fitzgerald and Elizabeth Gould © April–July 2017

Before the Tomahawk missiles start flying between Moscow and New York, Americans had better educate themselves quickly about the forces and the people who claim that Russia covered up a Syrian government gas attack on its own people.

It seems that proof no longer matters in the rush to further transform the world into Dante's vision of Hell. Allegations made by anonymous and spurious sources as well as by outright fraudsters have become enough. Washington's paranoia and confusion bear an uncanny resemblance to the final days of the Third Reich, when the leadership in Berlin became completely unglued.

Tensions have been building since fall [autumn], with accusations that the Russian media interfered with the 2016 US presidential election and are a growing threat to America's national security. The latest release from WikiLeaks strongly suggests that it was the CIA's own contract hackers behind Hillary Clinton's email leaks, and not the Russians.

The United States has a long reputation of accusing others of things they didn't do and planting fake news stories to back it up in order to provide a cause for war. The work of secret counterintelligence services is to misinform the public in order to shape opinion, and that's what this is. The current US government campaign to slander Russia over anything and everything it does bears

all the earmarks of a classic disinformation campaign, but this time even crazier. Considering that Washington has put Russia, China and Iran on its anti-globalist hit list from which no one is allowed to escape, and has drummed up charges against them, shouldn't come as a surprise. But accusing Russia of undermining American democracy and interfering in an election is tantamount to an act of war, and that simply is not going to wash.

This time, the United States is not demonising an ideological enemy (USSR) or a religious one (al Qaeda, ISIS, Daesh, etc.). It's making this latest venture into the blackest of propaganda a race war, the way the Nazis made their invasion of Russia a race war in 1941, and that is not a war that the United States can justify or win.

The level and shrillness of the latest disinformation campaign has been growing for some time. But the American public has lived in a culture of fake news (formerly known as propaganda) for so long that many have grown to accept fake news as real news. George Orwell saw this coming, and here it is.

As a big supporter of US military intervention in Cuba and an avowed practitioner of "yellow journalism", American newspaper publisher William Randolph Hearst admonished the illustrator he'd sent to Cuba in 1897 who'd found no war to illustrate: "You furnish the pictures, and I'll furnish the war." Hearst eventually got his war, and America's experiment in imperialism was off and running.

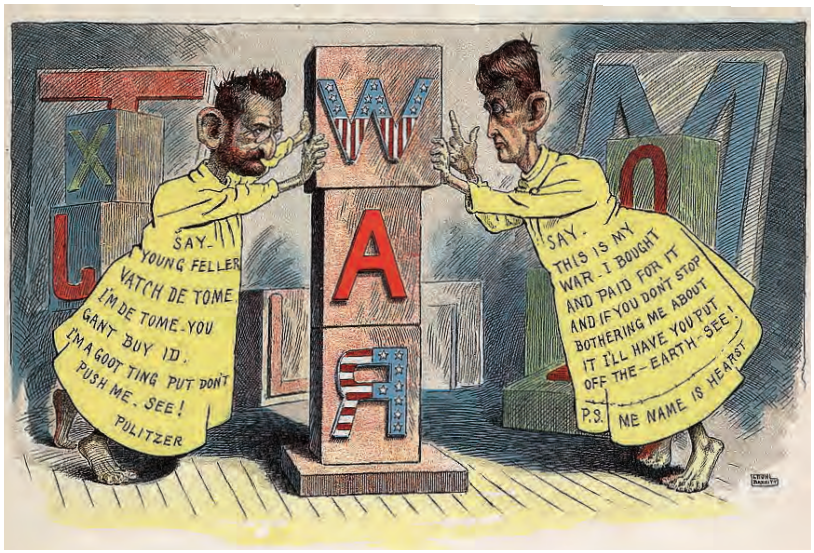
The American people should know by now that their country's wars are fertile ground for biased, one-sided, xenophobic fake news and that the United States has been in a permanent state of war since 1941. Although the targets have shifted over the years, the purpose of the propaganda hasn't. Most cultures are coerced, cajoled or simply threatened into accepting known falsehoods demonising their enemies during wartime—but no matter how frequently repeated or cleverly told, no lie can hold if the war never ends.

The legendary Cold Warrior, *Time* and *Life* magazines' American publisher Henry Luce, once asked his Time Inc. executives if his personal fight against Communism was "a declaration of private war" and whether the idea was "unlawful and probably mad". Nonetheless, despite his doubts about his own sanity, Luce allowed the CIA to use his *Time* and *Life* magazines as a cover for the agency's operations and to provide credentials to CIA personnel.

...Americans have become aware that the people whom Secretary of State Colin Powell once called "the crazies" have taken the country over the cliff.

Luce was not alone in his service to CIA propaganda wars. Recently declassified documents reveal that the CIA's propaganda extended to all the mainstream media outlets. Dozens of the most respected journalists and opinion-makers during the Cold War considered it a privilege to keep American public opinion from straying away from CIA control.

Now that the new Cold War has turned hot, we are led to believe that the Russians have breached this wall of not-so-truthful journalists and rattled the foundation of everything that we are supposed to hold dear about the purity of the US election process and "freedom of the press" in America.



Cartoon by Leon Barritt for *Vim* magazine, 29 June 1898, featuring newspaper publishers Joseph Pulitzer and William Randolph Hearst dressed as The Yellow Kid (a popular cartoon of the day), each pushing against a pillar of wooden blocks spelling "WAR". This is a satire on the Pulitzer and Hearst newspapers' role in drumming up American public support for the war against Spain, centred on Cuba.

Black propaganda is all about lying. Authoritarian governments lie regularly. Totalitarian governments do it so often that nobody believes them. A government based on democratic principles like the United States is supposed to speak the truth, but when the US government's own documents reveal that it has been lying over and over again for decades, the jig is up.

Empires have been down this road before, and it doesn't end well. Americans are now being told that they should consider all Russian opinion as fake and ignore any information that challenges the mainstream media and the US government on what is the truth and what is the lie. But for the first time in memory, Americans have become aware that the people whom Secretary of State Colin Powell once called "the crazies" have taken the country over the cliff.

The Machiavellian Elites' Takeover of America

The recent assertion by the Trump White House that Damascus and Moscow released "false narratives" to mislead the world about the 4 April 2017 sarin gas attack in Khan Shaykhun, Syria, is a dangerous next step in the "fake news" propaganda war launched in the final days of the Obama administration. It is a step whose deep roots in Communist Trotsky's Fourth International must be understood before deciding whether American democracy can be reclaimed.

Muddying the waters of accountability in a way not seen since Senator Joe McCarthy at the height of the Red Scare in the 1950s, the Countering Foreign Propaganda and Disinformation Act, signed into law without fanfare by President Obama on 23 December 2016, authorised a government censorship bureaucracy comparable only to George Orwell's fictional Ministry of Truth in his novel *Nineteen Eighty-Four*. The official purpose of this new bureaucracy, called the Global Engagement Center, is to "recognize, understand, expose, and counter foreign state and non-state propaganda and disinformation efforts aimed at undermining United States national security interests". However, the real purpose of this Orwellian nightmare is to cook the books on anything that challenges Washington's neoconservative pro-war narrative and to intimidate, harass or imprison anyone who tries to challenge it. As already demonstrated by President Trump's firing of Tomahawk missiles at a Syrian government airbase, it is a recipe for a world war—and, like it or not, that war has already begun.

This latest attack on Russia's supposed false narrative takes us right back to 1953 and the beginnings of the cultural war between East and West. Its roots are tied to the Congress for Cultural Freedom, to James Burnham's pivot from Trotsky's Fourth International to right-wing conservatism and to the rise of the neoconservative Machiavellians as a political force. As Burnham stressed in *The Struggle for the World*, the Third World War had already begun with the 1944 Communist-led Greek sailors' revolt. In Burnham's Manichaean thinking, the West was under siege. US strategist George Kennan's Cold War policy of containment was no different from British Prime Minister Neville Chamberlain's policy of appeasement. Détente with the Soviet Union amounted to surrender. Peace was only a disguise for war—and that war would be fought with politics, subversion, terrorism and psychological warfare. Soviet influence had to be rolled back wherever possible. That meant subverting the Soviet Union and its proxies and, when necessary, subverting Western democracies as well.

The CIA's Psychological Strategy Board

The true irony of Washington's late-stage efforts today to monopolise "truth" and attack alternative narratives isn't just in its blatant contempt for genuine free speech. The entire "Freedom Manifesto" employed by America and Britain since World War II was never free at all, but was a concoction of the CIA's Psychological Strategy Board (PSB) with its comprehensive psychological warfare program waged on friend and foe alike. The CIA would come to view the entire program, beginning with the 1950 Berlin Conference, as a landmark in the Cold War, not just for solidifying the CIA's control over the non-Communist Left and the West's "free" intellectuals but for enabling the CIA to secretly disenfranchise Europeans and Americans from their own political culture in such a way that they would never really know it.

The USS *Ross* firing a Tomahawk missile towards the Shayrat Airbase in Syria on 7 April in retaliation for the sarin chemical attack. (Photo: Robert S. Price, US Navy)

As historian Christopher Lasch wrote in 1969 of the CIA's co-optation of the American Left: "The modern state, among other things, is an engine of propaganda, alternately manufacturing crises and claiming to be the only instrument that can effectively deal with them. This propaganda, in order to be successful, demands the cooperation of writers, teachers, and artists not as paid propagandists or state-censored time-servers but as 'free' intellectuals capable of policing their own jurisdictions and of enforcing acceptable standards of responsibility within the various intellectual professions."

Key to turning these "free" intellectuals against their own interests was the CIA's "doctrinal program" for Western cultural transformation contained in the 1953 draft document PSB D-33/2. The document foretells of a "long-term intellectual movement" to "break down world-wide doctrinaire thought patterns" and "create confusion, doubts and loss of confidence" as well as "to weaken objectively the intellectual appeal of neutralism and to predispose its adherents towards the spirit of the West". In addition, "predisposing" the local elites to "the philosophy held by the planners of the doctrinal program" would help to disguise "the American effort so that it appears to be a native development".

While the document declared itself as an antidote to Communist totalitarianism, one critic of the program, PSB

officer Charles Burton Marshall, viewed PSB D-33/2 as frighteningly totalitarian, interposing "a wide doctrinal system" that "accepts uniformity as a substitute for diversity", embracing "all fields of intellectual interests, from anthropology and artistic creations to sociology and scientific methodology". He concluded: "That is just about as totalitarian as one can get."

Burnham's Machiavellian elitism lurks in every shadow of the document. As noted by Frances Stonor Saunders in *The Cultural Cold War*: "Marshall also took issue with the PSB's reliance on 'non-rational social theories' which emphasized the role of an elite 'in a manner reminiscent of Pareto, Sorel, Mussolini and so on'. Weren't these the models used by James Burnham in his book *The Machiavellians*? Perhaps there was a copy usefully to hand when PSB D-33/2 was being drafted. More likely, James Burnham himself was usefully to hand."

Burnham was more than just at hand when it came to secretly implanting a Fascist philosophy of extreme elitism into America's Cold War orthodoxy. With his book *The Machiavellians*, James Burnham had composed the manual that forged the old Trotskyist Left together with a right-wing Anglo-American elite.

The political offspring of that volatile union would come to be called "neoconservatism". Its overt mission would be to roll back Russian/Soviet influence everywhere. Its covert mission would be to reassert British cultural dominance over the emerging Anglo-American Empire and maintain it through propaganda.

The UK's Information Research Department

Hard at work on that task was the secret Information Research Department (IRD) of the UK's Foreign and Commonwealth Office. Rarely spoken of in the context of CIA-funded secret operations, the IRD served as a covert anti-Communist propaganda unit from 1946 until 1977. According to Paul Lashmar and James Oliver, authors of *Britain's Secret Propaganda War*: "…the vast IRD enterprise had one sole aim: [t]o spread its ceaseless propaganda output (i.e., a mixture of outright lies and distorted facts) among top-ranking journalists who worked for major agencies, papers and magazines, including Reuters and the BBC, as well as every other available channel. It worked abroad to discredit communist parties in Western Europe which might gain a share of power by entirely democratic means, and at home to discredit the British Left."

The IRD was to become a self-fulfilling disinformation machine for the far right of the international intelligence elite, offering fabricated and distorted information to "independent" news outlets then using the laundered story as "proof" of the false story's validity.

One such front established with CIA money was Forum World Features, operated at one time by Burnham acolyte Brian Rossiter Crozier. Described by Burnham's biographer Daniel Kelly as a "British political analyst", the legendary Brian Crozier functioned for over 50 years as one of Britain's top propagandists and secret agents.

If anyone today is shocked by the biased, one-sided and xenophobic rush to judgement alleging Russian influence over the US presidential election of 2016, they need look no further than Brian Crozier's closet for the blueprints. As we were told outright by an American military officer in 1982 during the first war in Afghanistan, the United States didn't need "proof the Soviets used poison gas"—and it doesn't need proof against Russia now.

Crozier might best be described as a daydream believer, a dangerous imperialist who acted out his dreams with open eyes. From the beginning of the Cold War until his death in 2012, Crozier and his protégé Robert Moss propagandised on behalf of the military dictators Francisco Franco and Augusto Pinochet, organised private intelligence organisations to destabilise governments in the Middle East, Asia, Latin America and Africa, and worked to delegitimise politicians in Europe and Britain who were viewed as insufficiently anti-Communist. The mandate of his Institute for the Study of Conflict, set up in 1970, was to expose the supposed KGB campaign of worldwide subversion and put out stories smearing anyone who questioned it as a dupe, a traitor or a Communist spy.

Brian Crozier regarded *The Machiavellians* as a major formative influence in his own intellectual development, and he wrote in 1976: "[I]ndeed it was this book above all others that first taught me *how* to think about politics." The key to Crozier's thinking was Burnham's distinction between the "formal" meaning of political speech and the "real"—a concept which, of course, was grasped only by the elites. In a 1976 article, Crozier marvelled at how Burnham's understanding of politics had spanned 600 years and how the use of "the formal" to conceal "the real" was no different today than when used by Dante Alighieri's "presumably enlightened Medieval mind". Crozier wrote: "The point is as valid now as it was in ancient times and in the Florentine Middle Ages, or in

1943. Overwhelmingly, political writers and speakers still use Dante's method. Depending on the degree of obfuscation required (either by circumstances or the person's character), the divorce between formal and real meaning is more or less absolute."

But Crozier was more than just a strategic thinker. He was a high-level covert political agent who put Burnham's talent for obfuscation and his Fourth International experience to use to undermine détente and set the stage for rolling back the Soviet Union. In a secret meeting at a City of London bank in February 1977, he initiated a private-sector operational intelligence agency, the Sixth International (The 6I), to pick up where Burnham left off, politicising and of course privatising many of the dirty tricks that the CIA and other intelligence services could no longer be caught doing. As Crozier explained in his memoir *Free Agent*, the name "The 6I" was chosen "[b]ecause the Fourth International split". "…The Fourth International was the Trotskyist one, and when it split, this meant that, on paper, there were five Internationals. In the numbers game, we would constitute the Sixth International, or '6I'."

Crozier's cooperation with numerous "able and diligent Congressional staffers" and with "the remarkable General Vernon ('Dick') Walters, recently retired as Deputy Director of Central Intelligence" cemented the rise of the neoconservatives. When President Carter caved in to Team B and to his neoconservative National Security Advisor Zbigniew Brzezinski's plot to lure the Soviets into their own Vietnam in Afghanistan, it fulfilled Burnham's mission and delivered the world to the Machiavellians without anyone being the wiser. George Orwell wrote in his 1946 essay "Second Thoughts on James Burnham": "…What Burnham is mainly concerned to show [in his book *The Machiavellians*] is that a democratic society has never existed and, so far as we can see, never will exist. Society is of its nature oligarchical, and the power of the oligarchy always rests upon force and fraud… Power can sometimes be won and maintained without violence, but never without fraud…"

Today, Burnham's use of Dante's political treatise *De Monarchia* to explain his mediaeval understanding of politics might best be swapped for Dante's *The Divine Comedy*, a paranoid comedy of errors in which the door to Hell swings open to one and all, including the elites, regardless of their status. As they say in Hell: *Lasciate ogni speranza, voi ch'entrate*—"Abandon all hope, ye who enter here". ∞

About the Authors:

Paul Fitzgerald and Elizabeth Gould, a husband-and-wife team, first worked together in 1979 when co-producing a documentary, *The Arms Race and the Economy: A Delicate Balance*, for his TV show *Watchworks*. In 1981 they were granted the first visas for a US TV crew to enter Soviet-occupied Afghanistan. But the pictures and

Domenico di Michelino's 1465 fresco *La Commedia Illumina Firenze* ("The Comedy Illuminating Florence") is in the Santa Maria del Fiore cathedral in Florence. Dante Alighieri is shown holding a volume of his epic poem *The Divine Comedy* and pointing to a procession of sinners.

the people inside Afghanistan told a very different story from the one being broadcast on the nightly news.

Following their exclusive news story for *CBS Evening News*, they produced the documentary *Afghanistan Between Three Worlds* for PBS. In 1983 they returned to Kabul for ABC's *Nightline* with Harvard Negotiation Project director Roger Fisher. They were told that the Soviets wanted to negotiate their way out and go home. Peace in Afghanistan was a desired option. But the story that President Carter called "the greatest threat to peace since the Second World War" had already been written by America's policy-makers, and American pundits were not about to change the script.

As the first American journalists to go deeply inside the story, they not only had a view of an unseen life in Afghanistan but a revelatory look at how the US defined itself against the world under the veil of superpower confrontation. Once the Soviets had crossed the border into Afghanistan, the fate of both nations was sealed. But as Fitzgerald and Gould pursued the reasons behind the wall of propaganda that shielded the truth, they found themselves drawn into a story that was growing into mythic dimensions as old empires were being undone and new ones hatched. America had launched a Crusade, and the 10-year war in Afghanistan was only the first chapter.

At the time of the first World Trade Center bombing in 1993, Fitzgerald and Gould were working on a film script about Afghanistan for director Oliver Stone and began to piece together the mythic implications of the story. During their research, many documents preceding the Afghanistan crisis were declassified. Over the next decade they tracked a labyrinth of clues, only to find a

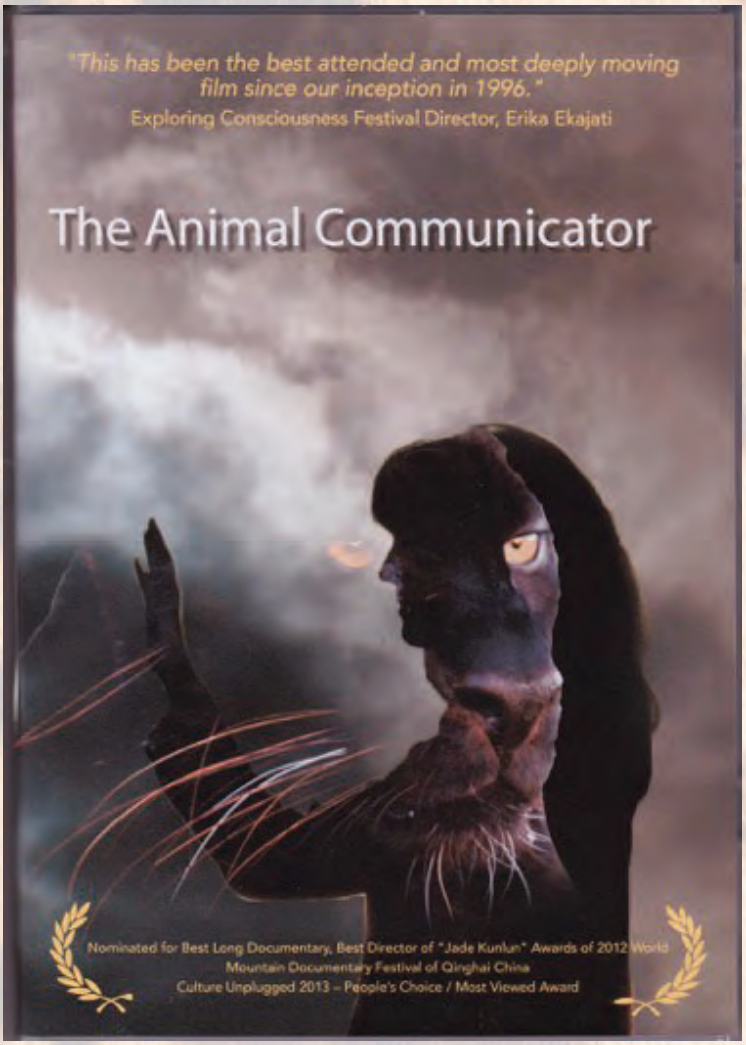
The Animal Communicator DVD

What if you could talk to animals and have them talk back to you?

Anna Breytenbach has dedicated her life to what she calls interspecies communication. She sends detailed messages to animals through pictures and thoughts. She then receives messages of remarkable clarity back from the animals.

AUD$30
+ postage & handling
$33 posted in Australia



"This has been the best attended and most deeply moving film since our inception in 1996."
Exploring Consciousness Festival Director, Erika Ekajati
The Animal Communicator
Nominated for Best Long Documentary, Best Director of "Jade Kunlun" Awards of 2012 World Mountain Documentary Festival of Qinghai China
Culture Unplugged 2013 – People's Choice / Most Viewed Award

Anna can feel the scars hidden under a monkey's fur. She can understand the detailed story that is causing a bird's trauma. She transforms a snarling leopard into a relaxed, contented cat.

The whole animal kingdom comes alive in a way never seen before: wild birds land on her shoulders, fish gather around her when she swims, and wild, unfamiliar baboons lie on her body as if she is one of their own.

This is the first full-length film on the art of animal communication.

MMR Vaccine Science is *not* settled

A Critical Review of the Autism Literature

Image: Liane Metzler, unsplash.com

by Brian S. Hooker, PhD, PE, and the Alliance for Natural Health USA
© December 2016 – June 2017

The modern inception of public mistrust in vaccines began in the late 1990s following the release of a study by Andrew Wakefield *et al.*[1] on a possible link between the MMR (measles-mumps-rubella) vaccine and chronic inflammatory bowel disease related to autism. The study was published in *The Lancet* in 1998 and was eventually retracted by the journal in 2010. But since 1998, the media and various government agencies have used sporadic and hastily completed epidemiological studies as evidence that vaccines are safe.

Writer Mark Twain once quipped: "Facts are stubborn, but statistics are more pliable." There are many ways in which data is chosen, manipulated and compared, and the average person who has only a basic knowledge of statistical methods must take the word of the author(s) of a study that the results are "proof". Important policy decisions and laws are being made and public debate is being suppressed based on the unexamined assumption that the science on vaccine safety has been settled.

For this review, former bioengineer Dr Brian Hooker and the Alliance for Natural Health USA (ANH-USA) scrutinised 12 of the papers most often cited as "proof positive" that vaccines, MMR in particular, are safe. For each study, an overview of findings is presented along with an analysis of the study's flaws and a final statement about conflicts of interest. *– ANH-USA and Ed.*

Summary of Findings

Generally speaking, each study that was examined was conducted by medical doctors or researchers who had connections with government immunisation offices or pharmaceutical companies and therefore had vested interests in "proving" that vaccines are universally safe.

Other problems were identified in this review, including poor sample choice, inconsistencies in data, unproven assumptions, subjective dismissals of data contrary to the conclusions, faulty comparisons, unreliable methods and unsupported conclusions. Given these flaws, one cannot take these studies as "proof positive" that vaccines are as universally safe for children as government agencies or pharmaceutical companies claim.

We do not posit that vaccines are a cause of autism—but we do point out that these studies cannot allay all concerns, given the various issues that we've uncovered.

No evidence for measles, mumps, and rubella vaccine–associated inflammatory bowel disease or autism in a 14-year prospective study (1998)[2]

Authors: H. Peltola, A. Patja, P. Leinikki, M. Valle, I. Davidkin, M. Paunio

Study overview: This study was conducted in response to a UK study by Andrew Wakefield *et al.*, published in *The Lancet* in 1998, which suggested a link between the measles-mumps-rubella (MMR) vaccine and chronic inflammatory bowel disease related to autism.[3] Peltola *et al.* reviewed data from the US Vaccine Adverse Event Reporting System (VAERS) to claim that gastrointestinal (GI) symptoms were rare after MMR vaccination. Their findings came from data that showed 31 individuals complaining of GI symptoms after receiving the MMR vaccine out of three million vaccines administered in the years examined. This study is often cited as evidence that the MMR vaccine is safe.

That their findings are based on inconsistent data should really be enough for credible reporting on vaccinations to *not* cite the study.

Study's flaws: The US VAERS database is a federally funded surveillance program reliant on self-reporting[4], meaning that only those with the wherewithal to report their adverse event will do so. The VAERS Guide itself states: "'Underreporting' is one of the main limitations of passive surveillance systems, including VAERS. The term underreporting refers to the fact that VAERS receives reports for only a small fraction of actual adverse events."[5] By VAERS' own guidelines, many more than 31 individuals may have experienced symptoms that were not reported. This type of study is inherently limited by relying solely on VAERS data. It cannot be ruled out that a larger population experienced GI symptoms after receiving the vaccine, nor that a specific subpopulation could be vulnerable to the MMR vaccine, similar to the children evaluated in the 1998 Wakefield *et al.* paper.

Conflicts of interest: This study was funded by Merck, which makes the current formulation (M-M-R® II) of the measles-mumps-rubella vaccine and stands to profit from results that disprove any dangers.

A population-based study of measles, mumps, and rubella vaccination and autism (2002)[6]

Authors: K.M. Madsen, A. Hviid, M. Vestergaard, D. Schendel, J. Wohlfahrt, P. Thorsen *et al.*

Study overview: Admitting that previous studies disproving a link between MMR vaccine and autism were limited by design, and responding to the World Health Organization's call for further study, Madsen *et al.* sought a larger data sample to increase the statistical analysis capabilities. They conducted a retrospective study of children born in Denmark between 1991 and 1998, after the MMR vaccine had been approved for use in Denmark in 1987. They compared the cohort of unvaccinated children with the nearly half a million children who had received the vaccine, and found an insignificant relative risk of autism and autism spectrum disorder in the vaccinated population.

Study's flaws: The data presented by the researchers in their findings is inconsistent and calls into question their entire methodology. In their Results, table 1 reports 269 vaccinated children with autistic disorder and 47 unvaccinated children with autistic disorder, while table 2 reports 263 vaccinated children with autistic disorder and 53 unvaccinated children with autistic disorder. Using one set of numbers instead of the other changes the results from slightly less than a relative risk of 1.0 to slightly *more* when the vaccinated cohort is compared with the unvaccinated. That their findings are based on inconsistent data should really be enough for credible reporting on vaccinations to *not* cite the study. Also, the authors themselves admitted that this type of study does not rule out that a subpopulation could be vulnerable to the MMR vaccine, as presented in the 1998 Wakefield *et al.* paper published in *The Lancet*.

Conflicts of interest: This study was funded in part by the US National Vaccine Program Office and the National Immunization Program at the Centers for Disease Control and Prevention (CDC), which had a vested financial interest in the increased uptake of the MMR vaccine as it directly bought the vaccine from the manufacturer Merck and distributed it, for reimbursement, to the states' public health departments. One of the study's co-authors, Dr Diana Schendel, was a CDC employee at the time of publication. In addition, three of the co-authors, Mads Melbye, MD, Anders Hviid and Jan Wohlfahrt, were employees of Staten Serum Institut, a for-profit company that manufactures and distributes vaccines in Denmark.

Do children who become autistic consult more often after MMR vaccination? (2001)[7]

Authors: S. DeWilde, I.M. Carey, N. Richards, S.R. Hilton, D.G. Cook

Study overview: The researchers posited that if the MMR vaccine were causing autism, then children with symptoms would have a significant increase in general practitioner visits post-immunisation. Data from the UK during the years 1989–2000 was used to compare visits to the primary care provider by autistic children with visits by non-autistic children within six months of receiving the MMR vaccination. They found no significant increase in doctor visits within this six-month time period.

Study's flaws: The premise of this paper is based on the assumption that if the MMR vaccine caused autism, then the number of general practitioner visits would increase for autistic children after the administration of their first MMR vaccination. But this does not take into account the total number of practitioner visits, which would include specialist visits. It stands to reason that most general practitioners would not see autistic children at a greater frequency but instead would make referrals to specialists, such as behaviourists, neurologists and gastroenterologists, who would be sought out to attend to the symptoms of an adverse reaction. In addition, the data does not show how many parents may have sought treatment for their children's symptoms outside the narrow six-month window studied. Finally, there were no autism specialists among the authors who could speak to how and when autism presents and is diagnosed.

Conflicts of interest: One of the paper's authors, Dr Derek G. Cook, was Professor of Epidemiology in the Department of Public Health Sciences at St George's Hospital Medical School, London, England. Public health practitioners are generally trained to accept vaccination policies without question and would not serve as objective researchers.

Measles, mumps, and rubella vaccination and bowel problems or developmental regression in children with autism: population study (2002)[8]

Authors: B. Taylor, E. Miller, R. Lingam, N. Andrews, A. Simmons, J. Stowe

Study overview: This paper focused on autism cases identified in five health districts in northeastern London, England, in children born nine years prior to and nine years after the introduction of the MMR vaccine in the UK in 1988. The authors hypothesised that if autism were related to the MMR vaccination, then there would be a corresponding increase in the number of autism cases after 1988 as well as rising rates of regressive autism (in which a child with typical developmental levels suddenly begins to lose speech and social skills and is diagnosed subsequently with autism). Additionally, the researchers sought to determine if the MMR vaccination was linked to an increased incidence of bowel disorders among children with autism, perhaps indicating a "new variant" form of autism. The study's authors concluded that there was no "new variant" form characterised by regressive autism and bowel disorders, and that there was no link between the MMR vaccine and autism.

Study's flaws: The authors claimed that there is no statistical evidence of any link between MMR vaccination and autism; however, the raw data suggests otherwise. Consider their report of the number of children whose parents reported symptoms: 29% of parents reported an incidence of autism, regressive autism or bowel disorder *before* the child was vaccinated, as opposed to 58% of parents who reported symptoms *after* the vaccination. Only 13% of reported cases occurred in unvaccinated children. The authors cautioned in their conclusion that some parents may have changed the age at which they noticed symptoms after the Wakefield study made news, but this is complete conjecture on their part and certainly does not explain such a large differential. Their own data suggests that more children overall were "regressing" *after* the MMR vaccination than before.

Conflicts of interest: Two of the study's authors, Dr Elizabeth Miller and Nick Andrews, are listed as with the Immunisation Division, Public Health Laboratory Service, Communicable Disease Surveillance Centre, London. This Division was in charge of immunisation uptake as well as vaccine safety in the UK at the time of publication.

No evidence for a new variant of measles-mumps-rubella–induced autism (2001)[9]

Authors: E. Fombonne, S. Chakrabarti

Study overview: This study sought to find evidence of a new form of autism characterised by developmental regression (in which children who seem to be achieving

developmental milestones begin losing ground and are diagnosed subsequently with some form of autism) and bowel disorders in children, as posited by the 1998 Wakefield *et al*. study. The authors contended that if such a new form of autism existed, they should be able to find statistical evidence in at least one of the following ways:

- there should be a higher incidence of this type of disorder in the general population;
- the first parental concern should be closer to the mean vaccination age in vaccinated versus unvaccinated children;
- there should be an increase in regression of autistic children in vaccinated versus unvaccinated children;
- autistic children with regression would be clustered around age at vaccination;
- autistic children with regression would have distinct symptom and severity profiles;
- regressive autism would be associated with gastro-intestinal symptoms and/or inflammatory bowel disorder.

The study's authors used three sample sets to identify statistical relationships between administration of the MMR vaccine and evidence of any of the above-listed indicators. The first sample was a purposive sample comprising children who had already been identified with pervasive developmental disorder (PDD) through a survey in Stafford, England. It consisted of 96 children born between 1992 and 1995, all but one of whom had received the MMR vaccination. The second sample was a convenience sample, in which the subjects had been volunteered for or been chosen to take part in the study, specifically culled from the practice of the paper's first author, Eric Fombonne, MD. This sample also comprised children who had received the MMR vaccination after 1988 (when the MMR vaccine was introduced), including 68 children born between 1987 and 1996 who had a confirmed diagnosis of PDD. The third sample was also a convenience sample, of 99 individuals with autism born before the introduction of the MMR vaccine. The authors claimed that their analysis found no statistical evidence to support any of the above claims, thereby establishing that there was no new form of autism and no link to the MMR vaccine.

Study's flaws: Comparing purposive samples to convenience samples is not a valid research method and therefore should not be relied upon to make inferences regarding the MMR vaccine and autism.

Conflicts of interest: After this paper was published, lead author Dr Fombonne violated scientific ethics at his new posts at Montreal Children's Hospital and McGill University, Quebec, Canada, when he improperly used samples derived from autistic children for another study unauthorised by their parents. Dr Fombonne has also testified as an expert witness for vaccine manufacturers and against families with reportedly vaccine-injured children, in civil courts and for the National Vaccine Injury Compensation Program in the USA.

Time trends in autism and in MMR immunization coverage in California (2001)[10]

Authors: L. Dales, S.J. Hammer, N.J. Smith

Study overview: The goal of the study was to find a correlation between increased autism rates and increased MMR vaccination rates in the general population. The authors used an ecological study, which looks at the whole population for incidences of a disease instead of examining individual cases of autism. The data came from the US state of California between 1980 and 1994, using kindergarten enrolment to determine the number of children vaccinated between 17 and 24 months of age and comparing it to the number of children born during these years who had received services from the California Department of Developmental Services after an autism diagnosis. Their analysis showed that while autism rates in California increased in this time period by 373 per cent (from 44 cases per 100,000 live births to 208 cases per 100,000 live births), the relative uptake of the MMR vaccine by 24 months increased by only 14 per cent, leading to their claim that the autism rate rise could not be accounted for by the relative rise in MMR vaccinations.

Study's flaws: A relationship between the MMR vaccine and autism cannot be ruled out at an individual level based on this comparison of overall rates alone. Increases in the use of the developmental centres may have been bolstered, as the authors acknowledged, by greater availability of the centres and a rise in public awareness of autism.

Furthermore, as described in a rebuttal, Edwardes and Baltzan[11] had remapped the data and found that the age at immunisation was actually trending younger than 17 months between 1981 and 1993, and that the original comparison plots were vertically compressed—and, once adjusted, suggested a correlation with autism incidence.

Conflicts of interest: The lead author, Loring Dales, MD, was the head of the Immunization Branch of the California Department of Health Services at the time of this paper's publication. Dr Dales was responsible for maintaining the uptake of vaccines, including the MMR vaccine, in California.

Mumps, measles, and rubella vaccine and the incidence of autism recorded by general practitioners: a time trend analysis (2001)[12]

Authors: J.A. Kaye, M. del Mar Melero-Montes, H. Jick

Study overview: This study was a time trend analysis, where researchers look to see if one variable increases or decreases in tandem with another factor over a period of time. The researchers looked at the rate of increase of autism diagnoses among children between 1988 and 1999, and then specifically looked at boys born between 1988 and 1993 and the rate of MMR vaccine uptake/administration during the same periods. The authors claimed that there was no correlation despite a marked increase in autism incidence with time, because trends in

MMR uptake remained unchanged.

Study's flaws: Instead of defining autism incidence based on when the child was born, the study's authors defined autism incidence based on diagnosis rate during diagnosis year, with the denominator corrected for age of diagnosis. This method gives a bias towards autism diagnosed at younger ages and is not a true measure of autism incidence. Therefore, this section of the analysis is essentially meaningless in determining true autism incidence versus MMR uptake. The rate of MMR uptake remained steady at over 95 per cent throughout the birth cohorts, while the autism incidence (as measured by the researchers) increased sevenfold. MMR uptake could not possibly have increased proportionally as it was already a high 95 per cent, so this type of temporal study sheds no light: it was de facto "proof" by design.

Conflicts of interest: The authors of this paper were residents at the Boston Collaborative Drug Surveillance Program at the Boston University School of Medicine. This program is supported in part by grants from AstraZeneca, Berlex Laboratories, Boehringer Ingelheim, Boots Healthcare International, Bristol-Myers Squibb Pharmaceutical Research Institute, GlaxoSmithKline, Hoffmann–La Roche, Janssen Pharmaceutica Products, R. W. Johnson Pharmaceutical Research Institute, McNeil Consumer Products and Novartis Farmacéutica. Funding for their residency program was directly tied to those profiting from the vaccine companies that their claims protected.

MMR and autism: further evidence against a causal association (2001)[13]

Authors: C.P. Farrington, E. Miller, B. Taylor

Study overview: The authors of this study investigated time trends of autism diagnoses in a case series involving 357 UK children diagnosed with autism. They looked at temporal relationships; that is, how much time had elapsed between administration of the MMR vaccine and a subsequent autism diagnosis. Farrington *et al*. looked at two different time spans—36 months and 60 months respectively—between the MMR vaccination and the first reported parental concern, as a previous study had only looked at a closer temporal relationship. Additionally, they looked at 24 months as an interval between the MMR vaccination and the onset of regressive autism. They claimed that their results showed no correlation, as autism incidence increased while MMR uptake remained steady. Importantly, the World Health Organization has used these findings to support its immunisation policy.[14]

Study's flaws: Despite the authors' claims, the data presented as evidence in their paper instead actually seems to *confirm* a temporal relationship between the MMR vaccination and the age of first diagnosis of autism. This is best shown by using their own data charts.

Figure 1 includes the age of first diagnosis for 64 unvaccinated children with autism and shows significantly more "scatter" as compared to figure 2 for 231 children who received a single dose of the MMR vaccine, where diagnoses tend to cluster between 0 and 30 months post-vaccination. Figure 3 shows that of 62 children who received two doses of the MMR vaccine, there was also clustering between 0 and 30 months after administration of the first vaccine.

The study's authors blamed this phenomenon on time trends, where cases post–MMR vaccination tend to be

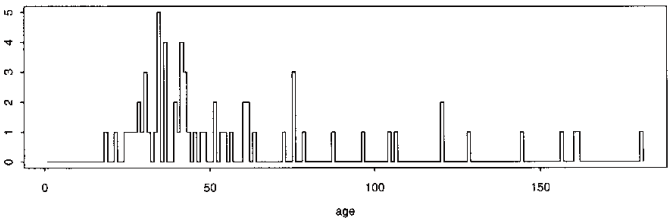

Figure 1. Distribution showing age at autism diagnosis (in months) of 64 unvaccinated children with autism.

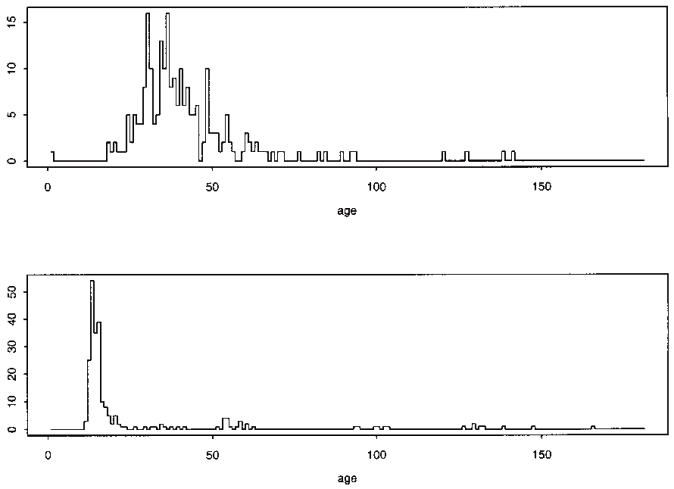

Figure 2. Distribution of (top) age at autism diagnosis and (bottom) age at vaccination (in months) of 231 children with autism who received a single dose of MMR vaccine.

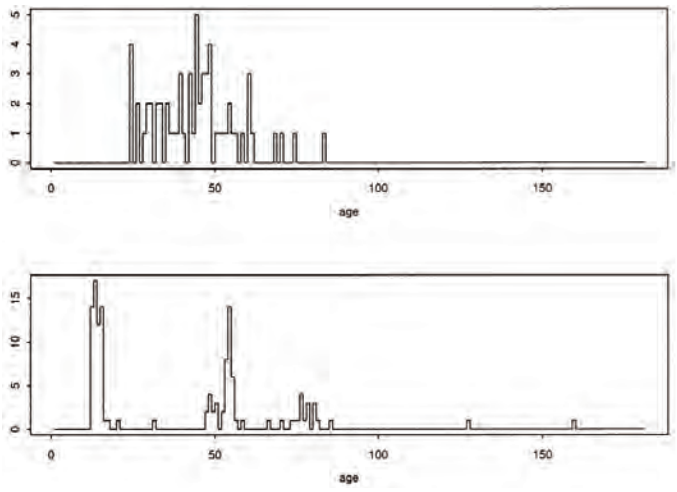

Figure 3. Distribution of (top) age at autism diagnosis and (bottom) age at vaccination (in months) of 62 children with autism who received two doses of MMR vaccine.

newer and cases without MMR vaccination tend to be older, because newer cases would be subject to earlier screening and diagnosis. This statement is completely unsubstantiated in the paper and does little to counter the clear clustering of autism diagnoses after vaccination.

Conflicts of interest: One of the authors, Dr Elizabeth Miller, was a chief official at the Immunisation Division of the UK's Public Health Laboratory Service (PHLS) and possessed an institutional conflict of interest, given the stake of the then PHLS in maintaining high vaccination rates in the United Kingdom.

Data findings should not be dismissed subjectively at the convenience of the researchers.

Autism and measles, mumps, and rubella vaccine: no epidemiological evidence for a causal association (1999)[15]

Authors: B. Taylor, E. Miller, C.P. Farrington *et al*.

Study overview: This study provided a comparison of autism rates before and after the introduction of the MMR vaccine in the UK in 1988. Data showed a sharp increase in autism incidence in the early 1990s but did not appear to correlate with MMR vaccine uptake, which plateaued soon after introduction. According to the study's authors, although most of the evidence did not show a temporal relationship between MMR vaccine timing and "onset of autism", there was compelling data for the age of first parental concern clustering between 0 and 6 months of MMR administration. The authors dismissed this finding by arguing that parents chose an age of first concern of 18 months simply because it was a round number.

Study's flaws: The claim that parents chose an age of concern of 18 months because it was a "round number" is unsubstantiated and therefore is not a valid explanation for the data cluster that shows otherwise. Data findings should not be dismissed subjectively at the convenience of the researchers.

Conflicts of interest: Two of the study's authors, Dr Elizabeth Miller and Pauline Waight, were with the then Immunisation Division, Public Health Laboratory Service, Communicable Disease Surveillance Centre, London, which reflects institutional conflict of interest as this agency was responsible at the time for increasing the vaccine uptake within the UK population.

Neurologic disorders after measles-mumps-rubella vaccination (2002)[16]

Authors: A. Mäkelä, J.P. Nuorti, H. Peltola

Study overview: This study used hospital records to determine if there was a relationship between when MMR vaccination and hospitalisations of children occurred for three different diagnoses: encephalitis (within three months of MMR vaccination); aseptic meningitis (within three months of vaccination); and autism (throughout the time period of analysis, which was 1982–1986). Data was taken from hospital records in Finland. The authors claimed that no temporal relationship existed between the MMR vaccination and any of the three diagnoses, including autism, in a hospital setting. They reported that there was no clustering of hospitalisations for autism at any intervals following immunisation.

Study's flaws: This study clearly shows that peak rates of autism diagnoses occurred after the MMR vaccine was administered, especially in the 0 to 6–month window following vaccination. Additionally, the data was based on autism "hospitalisation" visits, which is likely to be an under-ascertainment of actual autism cases—given that many cases are diagnosed in an outpatient setting.[17] Diagnoses in a hospital setting do not reflect the actual onset of symptoms, including regression, and the paper's authors admitted that this is a flaw in their analysis.

Conflicts of interest: Merck, the major MMR and MMR-II manufacturer, funded this study and held a worldwide monopoly on these vaccines during the research period.

Pervasive developmental disorders in Montreal, Quebec, Canada: prevalence and links with immunizations (2006)[18]

Authors: E. Fombonne, R. Zakarian, A. Bennett, L. Meng, D. McLean-Heywood

Study overview: This study focused on ecological methods—looking at the whole population for incidences of a disease rather than examining individual cases of autism—based on a population of students in a large school district in Montreal, Canada. The authors looked at the increases in developmental disorders which were identified in children by schools' special needs teams and compared them to (a) estimates of exposure to thimerosal (ethylmercury), which was phased out during the study, over the same time period, and (b) changes in the MMR vaccination trends, including a switch to a two-dose MMR schedule during the study period.

The study's authors concluded that there was no relationship between thimerosal exposure and increased developmental disorders. Furthermore, they claimed that while the vaccination rate experienced a dip during the study period, there was no corresponding decrease in developmental disorders, and also that there was no change in developmental disorders associated with the subsequent increase to a two-dose schedule.

Study's flaws: The school district represented in this study accounted for only 14 per cent of the total school population in Montreal but had the highest rates of pervasive developmental disorder (PDD, a.k.a. autism) diagnosis in the five total districts. In some cases, PDD rates were three times higher within this district.

Furthermore, the claim that the thimerosal exposure in the Canadian vaccine schedule starting in 1996 was "nil" is false. At this time, the thimerosal-free hepatitis B formulation had not yet been introduced (and wasn't until 2001) and the thimerosal-containing "penta" vaccine was

administered, leading to a cumulative maximum dosage of 137.5 micrograms of mercury. Essentially, this fact, along with the lack of actual vaccine records for cohort members, renders any time trend comparison between autism/ASD/PDD prevalence and thimerosal exposure useless. Also, regarding MMR vaccine uptake, the study authors used uptake as a metric of vaccine coverage, which was not done for the thimerosal analysis. The study's authors did not accurately reflect the effect of the introduction of two doses of the vaccine in 1996, which would have doubled the viral load administered to each individual.

Finally, the errors associated with the autism/ASD/PDD diagnoses essentially obviate any true indication of an upward trend, given that there is significant overlap in the 95% CI [confidence interval] range at each year reported, including the endpoints of 1987 and 1998.

Conflicts of interest: The lead author of this study, Eric Fombonne, MD, had significant conflicts of interest, as he had represented vaccine manufacturers many times as an expert witness in thimerosal litigation, opposing the families of vaccine-injured children.

Age at first measles-mumps-rubella vaccination in children with autism and school-matched control subjects: a population-based study in metropolitan Atlanta (2004)[19]

Authors: F. DeStefano, T.K. Bhasin, W.W. Thompson, M. Yeargin-Allsopp, C. Boyle

Study overview: The study's authors were looking for an association between the increased rates of autism in children and the MMR vaccination in both the general population and subgroups of children. The researchers compared the vaccination schedules of autistic children from the general population to a control group of school-matched children who did not have autism. This study focused on children enrolled in public school within five districts in metropolitan Atlanta, Georgia, USA, who had received their first MMR vaccination at different time intervals. Autism cases were matched with three controls based on gender, birth year and school of enrolment for a total sample of 2,448 individuals.

The researchers concluded that similar proportions of case children (with autism) and control children (school-matched subjects) had been vaccinated according to the recommended schedule, and likewise with any of the subgroups also studied. One subgroup, boys aged three to five years of age enrolled in special education services, had a rate of immunisation that was earlier than their school-matched controls. However, the authors argued that this subgroup would have had earlier immunisation as a requirement for receiving school-based services, and thus they dismissed this as insignificant.

Study's flaws: The study actually showed statistically significant relationships between autism incidence and MMR timing for all individuals considered in the study (OR [odds ratio]: 1.49; 95% CI: 1.04–2.14) with a stronger association for males only (OR: 1.67; 95% CI: 1:10–2.53) for those individuals who received their first MMR vaccine *prior to* 36 months of age, with a reference of those individuals who received their MMR vaccination *after* 36 months of age. This relationship is quite compelling, although the study's authors dismissed the effect, stating that children with autism would be enrolled in special education services requiring earlier MMR vaccination. This statement makes no sense in light of the fact that the relationship is observed to come exclusively from boys in the cohort and not from girls (no statistically significant relationship is seen when girls are considered separately). There is no reason to assume that boys enrolled in special education services would receive earlier MMR vaccinations than girls enrolled in the same special programs.

Autism incidence is on the rise. (Photo: hepingting)

Conflicts of interest: Two of the study's authors were employees of the National Immunization Program of the US Centers for Disease Control and Prevention (CDC), which is tasked with increasing immunisation rates in the USA in order to prevent outbreaks of infectious diseases. Thus there was a propensity *against* finding a causal relationship between vaccines and vaccine adverse events, which is demonstrated clearly in the text of the paper by the authors' faulty explanation when statistically significant relationships were observed.

Dr William Thompson, a co-author of the paper and the then lead statistician with the CDC, came forth in August 2014 with evidence of fraud committed specifically in regard to this study, and has since launched a complaint against his co-authors regarding the outcomes and the interpretations of the results.

Conclusion

Studies undertaken by researchers who have a vested interest in either the immunisation uptake or vaccine manufacture should be subjected to greater scrutiny.

While the goal should always be the eradication of disease, both the profit motive and bureaucracy impede the necessary safeguards to public health. While the majority of a population may suffer no ill effects from vaccines, subgroups of the population may be at risk.

After the general public started questioning the safety of vaccines in the late 1990s, public health agencies and drug manufacturers were quick to produce more than a dozen studies "proving" the safety of vaccines. Applying scientific scrutiny to some of these studies shows that they do not prove beyond dispute that vaccines are safe.

Additional independent, open-minded studies are needed to prove the safety of vaccines for all subgroups of the population. ∞

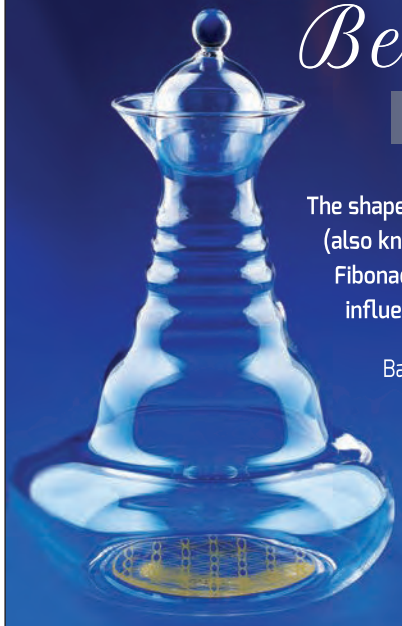
Beautiful glassware

uniquely shaped for revitalisation

NATURE'S DESIGN
Golden Ratio Products



The shape and form of Nature's Design glassware correlates with the dimensions of the Golden Ratio (also known as Sacred Geometry) precisely calculated to generate a silent vibration attuned to the Fibonacci Sequence (major chords): a concept we call "Harmonic Resonance". This resonance influences the vitality of the liquid within - and the environment surrounding the glassware.

Based on concepts of

structured water | harmonic resonance

Discover the amazing properties of this unique glassware and enjoy the benefits of drinking re-energised, structured water!

The secret language of trees

Image: Cocoparisienne, pixabay.com

Trees communicate using electrical, chemical, visual and even sonic signals. They cooperate and compete, and learn as they grow.

by Peter Wohlleben, from *The Hidden Life of Trees* © 2015–17

According to the dictionary definition, language is what people use when we talk to each other. Looked at this way, we are the only beings who can use language because the concept is limited to our species. Wouldn't it be interesting to know whether trees can also talk to each other? But how? They definitely don't produce sounds, so there's nothing we can hear. Branches creak as they rub against one another, and leaves rustle, but these sounds are caused by the wind and the tree has no control over them.

Trees, it turns out, have a completely different way of communicating: they use scent. Scent as a means of communication? The concept is not totally unfamiliar to us. Scientists believe that pheromones in sweat are a decisive factor when we choose our partners—those with whom we wish to procreate. So it seems fair to say that we possess a secret language of scent, and that trees demonstrate that they do as well.

Four decades ago, scientists noticed something on the African savannah. The giraffes there were feeding on umbrella thorn acacias, and the trees didn't like this one bit. It took the acacias mere minutes to start pumping toxic substances into their leaves to rid themselves of the large herbivores. The giraffes got the message and moved on to other trees in the vicinity. But did they move on to trees close by? No; for the time being, they walked right by a few trees and resumed their meal only when they had moved about 100 yards [~91 metres] away.

Trees and shrubs warn neighbours of attack.

The reason for this behaviour is astonishing. The acacia trees that were being eaten gave off a warning gas (specifically, ethylene) that signalled to neighbouring trees of the same species that a crisis was at hand. Right away, all the forewarned trees also pumped toxins into their leaves to prepare themselves. The giraffes were wise to this game, and therefore moved farther away to a part of the savannah where they could find trees that were oblivious to what was going on. Or else they moved upwind. For the scent messages are carried to nearby trees on the breeze, and if the animals walked upwind they could find acacias close by that had no idea the giraffes were there.

Sensory Signals

Similar processes are at work in our forests here at home. Beeches, spruce and oaks all register pain as soon as some creature starts nibbling on them. When a caterpillar takes a hearty bite out of a leaf, the tissue around the site of the damage changes. In addition, the leaf tissue sends out electrical signals, just as human tissue does when it is hurt. However, the signal is not transmitted in milliseconds, as human signals are; instead, the plant signal travels at the slow speed of a third of an inch [less than one centimetre] per minute.[4] Accordingly, it takes an hour or so before defensive compounds reach the leaves to spoil the pest's meal.

Trees live their lives in the really slow lane, even when they are in danger. But this slow tempo doesn't mean that a tree is not on top of what is happening in different parts of its structure. If the roots find themselves in trouble, this information is broadcast throughout the tree, which can trigger the leaves to release scent compounds. And not just any old scent compounds, but compounds that are specifically formulated for the task at hand.

This ability to produce different compounds is another feature that helps trees fend off attack for a while. When it comes to some species of insects, trees can accurately identify which bad guys they are up against. The saliva of each species is different, and trees can match the saliva to the insect. Indeed, the match can be so precise that trees can release pheromones that summon specific beneficial predators, which then help trees by eagerly devouring the insects that are bothering them. For example, elms and pines call on small parasitic wasps that lay their eggs inside leaf-eating caterpillars.[5] As the wasp larvae develop, they devour the larger caterpillars bit by bit from the inside out. Not a nice way to die. The result, however, is that the trees are saved from bothersome pests and can keep growing with no further damage. That trees can recognise saliva is, incidentally, evidence for yet another skill they must have: a sense of taste.

A drawback of scent compounds is that they disperse quickly in the air. Often they can be detected only within a range of about 100 yards. Quick dispersal, however, also has advantages. As the transmission of signals inside the tree is very slow, a tree can cover long distances much more quickly through the air if it wants to warn distant parts of its own structure that danger lurks.

A specialised distress call is not always necessary when a tree needs to mount a defence against insects. The animal world simply registers the tree's basic chemical alarm call. It then knows that some kind of attack is taking place and that predatory species should mobilise. Whichever species is hungry for the kinds of critters that attack trees just can't stay away.

Trees can also mount their own defence. Oaks, for example, carry bitter, toxic tannins in their bark and their leaves. These either kill chewing insects outright or at least affect the leaves' taste to such an extent that instead of being deliciously crunchy they become biliously bitter. Willows produce the defensive compound salicylic acid,

The *Aleiodes indiscretus* wasp parasitising a gypsy moth caterpillar. (Photo: Scott Bauer, USDA)

Clay tablets from ancient Sumer and Egypt mention medicines derived from willow and other foliage rich in salicylate. Hippocrates, c. 400 BC, referred to the use of the salicin-rich willow bark extract as a febrifuge (fever reducer). (Photo: Herbalteasonline.com)

which works in much the same way. (But not on us: salicylic acid is a precursor of aspirin, and tea made from willow bark can relieve headaches and bring down fevers.) Such defence mechanisms, of course, take time. Therefore, a combined approach is crucially important for arboreal early-warning systems.

The "Wood Wide Web" of Forests and Fungi

Trees don't rely exclusively on chemical dispersal in the air; if they did, some neighbours would not get wind of the danger. Dr Suzanne Simard of the University of British Columbia in Vancouver has discovered that they also warn each other using chemical signals sent through the fungal networks around their root tips, which operate no matter what the weather.[6] Surprisingly, news bulletins are sent via the roots not only by means of chemical compounds but also by means of electrical impulses that travel at the speed of a third of an inch per [minute], as noted. In comparison with our bodies, this is admittedly extremely slow. However, there are species in the animal kingdom, such as jellyfish and worms, whose nervous systems conduct impulses at a similar speed.[7] In the case of oaks, once the latest news has been broadcast, all oaks in the area promptly pump tannins through their veins.

Tree roots extend a long way, more than twice the spread of the tree's crown. So the root systems of neighbouring trees inevitably intersect with and grow into one another—though there are always some exceptions. Even in a forest there are loners, would-be hermits that want little to do with others. Can such antisocial trees block alarm calls simply by not participating? Luckily, they can't. For usually there are fungi present that act as intermediaries to guarantee quick dissemination of news. These fungi operate like fibre-optic Internet cables. Their thin filaments penetrate the ground, weaving through it in almost unbelievable density. One teaspoon of forest soil contains many miles of these "hyphae".[8] Over centuries, a single fungus can cover many square miles and can network an entire forest. The fungal connections transmit signals from one tree to the next, helping the trees exchange news about insects, drought and other dangers.

Science has adopted a term first coined by the journal *Nature* for Dr Simard's discovery of the "wood wide web" pervading our forests.[9] What and how much information is exchanged are subjects we have only just begun to research. For instance, Simard discovered that different tree species are in contact with one another, even when they regard each other as competitors.[10] And the fungi are pursuing their own agendas and appear to be very much in favour of conciliation and equitable distribution of information and resources.[11]

If trees are weakened, it could be that they lose their conversational skills along with their ability to defend themselves. Otherwise, it's difficult to explain why insect pests specifically seek out trees whose health is already compromised. It's conceivable that to do this, insects listen to trees' urgent chemical warnings and then test trees that don't pass on the message by taking a bite out of their leaves or their bark. A tree's silence could be because of a serious illness or, perhaps, the loss of its fungal network, which would leave the tree completely cut off from the latest news. The tree no longer registers approaching disaster, and the doors are open for the caterpillar and beetle buffet. The loners I just mentioned are similarly susceptible: they may look healthy, but they have no idea what is going on around them.

In the symbiotic community of the forest, not only trees but also shrubs and grasses—and possibly all plant species—exchange information this way. However, when we step into farm fields, the vegetation becomes very quiet. Thanks to selective breeding, our cultivated plants have, for the most part, lost their ability to communicate

The majority of fungi in the forest take the form of an underground mycelium, a vast network of single-cell strands. (Photo: nationalforests.org)

above or below ground—you could say they are deaf and dumb—and therefore are easy prey for insect pests.[12] That is one reason why modern agriculture uses so many pesticides. Perhaps farmers can learn from the forests and breed a little more wildness back into their grain and potatoes so that they'll be more talkative in the future.

A bee collects pollen from cherry blossoms.

Nature's Billboards

Communication between trees and insects doesn't have to be all about defence and illness. Thanks to your sense of smell, you've probably picked up on many feel-good messages exchanged between these distinctly different life-forms. I refer to the pleasantly perfumed invitations sent out by tree blossoms. Blossoms do not release scent at random or to please us. Fruit trees, willows and chestnuts use their olfactory missives to draw attention to themselves and invite passing bees to sate themselves. Sweet nectar, a sugar-rich liquid, is the reward the insects get in exchange for the incidental dusting they receive while they visit. The form and colour of blossoms are signals as well. They act somewhat like a billboard that stands out against the general green of the tree canopy and points the way to a snack.

So trees communicate by means of olfactory, visual and electrical signals. (The electrical signals travel via a form of nerve cell at the tips of the roots.)

Acoustic Surprises

What about sounds? Let's get back to hearing and speech. When I said earlier that trees are definitely silent, the latest scientific research now casts doubt even on this statement.

Along with colleagues from Bristol and Florence, Dr Monica Gagliano from the University of Western Australia has, quite literally, had her ear to the ground.[13] It's not practical to study trees in the laboratory; therefore, researchers substitute grain seedlings because they are easier to handle. They started listening, and it didn't take them long to discover that their measuring apparatus was registering roots crackling quietly at a frequency of 220 hertz. Crackling roots? That doesn't necessarily mean anything. After all, even dead wood crackles when it's burned in a stove. But the noises discovered in the laboratory caused the researchers to sit up and pay attention, for the roots of seedlings not directly involved in the experiment reacted. Whenever the seedlings' roots were exposed to a crackling at 220 hertz, they oriented their tips in that direction. This means that the grasses were registering this frequency, so it makes sense to say that they "heard" it.

Plants communicating by means of sound waves? That makes me curious to know more, because people also communicate using sound waves. Might this be a key to getting to know trees better? This is to say nothing of what it would mean if we could hear whether all was well with beeches, oaks and pines, or whether something was up. Unfortunately, we are not that far advanced, and research in this field is just beginning. But if you hear a light crackling the next time you take a walk in the forest, perhaps it won't be just the wind…

Arboreal Love

The leisurely pace at which trees live their lives is also apparent when it comes to procreation. Reproduction is planned at least a year in advance. Whether tree love happens every spring depends on the species.

Whereas conifers send their seeds out into the world at least once a year, deciduous trees have a completely different strategy. Before they bloom, they agree among themselves. Should they go for it next spring, or would it be better to wait a year or two? Trees in a forest prefer to bloom at the same time so that the genes of many individual trees can be well mixed. Conifers and deciduous trees agree on this, but deciduous trees have to consider browsers such as wild boar and deer.

When beeches and oaks put blooming on hold for a number of years, this has grave consequences for insects as well—especially for bees. It's the same for bees as for wild boar: a multi-year hiatus causes their populations to collapse—or, more accurately, could cause them to collapse because bees never build up large populations

Wild deer depend on tree reproduction for their food.

in deciduous forests in the first place. The reason is that true forest trees couldn't care less about these little helpers. What use are the few pollinators left after barren years when you then unfurl millions upon millions of blossoms over hundreds of square miles?

If you are a beech or an oak, you have to come up with a more reliable method of pollination, perhaps even one that doesn't exact payment. And what could be more natural than using the wind? Wind blows the powdery pollen out of the blossoms and carries it over to neighbouring trees. The wind has a further advantage. It still blows when temperatures fall, even when they drop below 53 degrees Fahrenheit [11.7 °C], which is when it gets too chilly for bees and they stay home.

Thus equipped, their seeds float slowly down from the tips of their branches and can easily be carried away on a breath of wind.

Conifers bloom almost every year, which means bees are an option for pollination because they would always find food. However, conifers are native to northern forests, which are too chilly for bees to be out and about while the trees are blooming, and that is probably why conifers, like beeches and oaks, prefer to rely on the wind. Conifers don't need to worry about taking breaks from blooming, like beeches or oaks, because they have no reason to fear deer and wild boar. The small seeds inside the cones of Spruce & Co. just don't offer an attractive source of nutrition. True, there are birds such as red crossbills which pick off cones with the tips of their powerful crossed bills and eat the seeds inside, but, in general, birds don't seem to be a big problem. And because there is almost no animal that likes to store conifer seeds for winter food, the trees release their potential heirs into the world on tiny wings. Thus equipped, their seeds float slowly down from the tips of their branches and can easily be carried away on a breath of wind. Spruce & Co. produce huge quantities of pollen, almost as though they want to outdo deciduous trees in the mating department. They produce such huge quantities that even in a light breeze, enormous dusty clouds billow over coniferous forests in bloom, giving the impression of a fire smouldering beneath the treetops.

This raises the inevitable question about how inbreeding can be avoided in such chaotic conditions. Trees have survived until today only because there is a great deal of genetic diversity within each species. If they all release their pollen at the same time, then the tiny grains of pollen from all the trees mix together and drift through the canopy. And because a tree's own pollen is particularly concentrated around its own branches, there's a real danger that its pollen will end up fertilising its own female flowers. But, as I just mentioned, that is precisely what the trees want to avoid. To reduce this possibility, trees have come up with a number of different strategies. Some species, like spruce, rely on timing. Male and female blossoms open a few days apart so that, most of the time, the latter will be dusted with the foreign pollen of other spruce. This is not an option for trees like bird cherries, which rely on insects.

Bird cherries produce male and female sex organs in the same blossom, and they are one of the few species of true forest trees that allow themselves to be pollinated by bees. As the bees make their way through the whole crown, they cannot help but spread the tree's own pollen. But the bird cherry is alert and senses when the danger of inbreeding looms. When a pollen grain lands on a stigma, its genes are activated and it grows a delicate tube down to the ovary in search of an egg. As it is doing this, the tree tests the genetic makeup of the pollen and, if it matches its own, blocks the tube, which then dries up. Only foreign genes, that is to say genes that promise future success, are allowed entry to form seeds and fruit. How does the bird cherry distinguish between "mine" and "yours"? We don't know exactly. What we do know is that the genes must be activated and they must pass the tree's test. You could say the tree can "feel" them.

The red crossbill is adapted for extracting conifer seeds. (Photo: Don Faulkner, flickr.com)

Some species have a particularly effective way of avoiding inbreeding: each individual has only one gender. There are both male and female willows, which means they can never mate with themselves but only procreate with other willows. But willows, it must be said, aren't true forest trees. They colonise pioneer sites, areas that are not yet forested. Because there are thousands of wildflowers and shrubs blooming in such places and they attract bees, willows, like bird cherries, also rely on insects for pollination. But here a problem arises. The bees must first fly to the male willows, collect pollen there, and then transport the pollen to the female trees.

If it were the other way around, there would be no fertilisation. How does a tree manage this if both sexes have to bloom at the same time? Scientists have discovered that all willows secrete an alluring scent to attract bees. Once the insects arrive in the target area, the willows switch to visual signals. With this in mind, male willows put a lot of effort into their catkins and make them bright yellow. This attracts the bees to them first. Once the bees have had their first meal of sugary nectar, they leave and visit the inconspicuous greenish flowers of the female trees.[16]

Inbreeding as we know it in mammals—that is to say, breeding between populations that are related to one another—is, of course, still possible in all three cases I have mentioned. And here, wind and bees come into play equally. As both bridge large distances, they ensure that at least some of the trees receive pollen from distant relations so the local gene pool is constantly refreshed. However, completely isolated stands of rare species of trees, where only a few trees grow, can lose their genetic diversity. When they do, they weaken, and after a few centuries they disappear altogether.

Strict Lessons in Tree School

Thirst is harder for trees to endure than is hunger, because they can satisfy their hunger whenever they want. A tree can satisfy a rumbling stomach right away using photosynthesis. But just as even the best baker cannot bake without water, the same goes for a tree: without moisture, food production stops.

A baobab tree can store as much as 31,700 gallons (120,000 L) of water to endure harsh drought conditions.

Male willows attract bees with their bright-yellow catkins.

A mature beech tree can send more than 130 gallons [~492 litres] of water a day coursing through its branches and leaves, and this is what it does as long as it can draw enough water up from below.[20] However, the moisture in the soil would soon run out if the tree were to do that every day in summer. In the warmer seasons, it doesn't rain nearly enough to replenish water levels in the desiccated soil. Therefore, the tree stockpiles water in winter. In winter, there's more than enough rain and the tree is not consuming water because almost all plants take a break from growing at that time of year. Together with below-ground accumulation of spring showers, the stockpiled water usually lasts until the onset of summer. But in many years, water then gets scarce. After a couple of weeks of high temperatures and no rain, forests can begin to suffer. The most severely affected trees are those that grow in soils where moisture is particularly abundant; they don't know the meaning of restraint and are lavish in their water use, and it is usually the largest and most vigorous that pay the price for this behaviour.

In the forest I manage, the stricken trees are generally spruce, which burst not at every seam but certainly along their trunks. If the ground has dried out and the needles high up in the crown are still demanding water, at some point the tension in the drying wood simply becomes too much for the tree to bear. It crackles and pops, and a tear about three feet [~0.9 metres] long opens in its bark. This tear penetrates deep into the tissue and severely injures the tree. Fungal spores then immediately take advantage of the tear to invade the innermost parts of the tree, where they begin their destructive work. In the years to come, the spruce will try to repair the wound but the tear keeps reopening. From some distance away, you can see a black channel streaked with pitch that bears witness to this painful process.

With that, we have arrived at the heart of tree school. Unfortunately, this is a place where a certain amount of physical punishment is still the order of the day, for Nature is a strict teacher. If a tree does not pay attention and do what it's told, it will suffer. Splits in its wood, in its bark, in its extremely sensitive cambium (the life-giving layer under the bark): it doesn't get any worse than this

for a tree. It has to react, and it does this not only by attempting to seal the wound. From then on, it will also do a better job of rationing water instead of pumping whatever is available out of the ground as soon as spring hits without giving a second thought to waste. The tree takes the lesson to heart, and from then on it will stick with this new, thrifty behaviour, even when the ground has plenty of moisture—after all, you never know!

A much more obvious lesson in tree school is how trees learn to support themselves. Trees don't like to make things unnecessarily difficult. Why bother to grow a thick, sturdy trunk if you can lean comfortably against your neighbours? As long as they remain standing, not much can go wrong. However, every couple of years a group of forestry workers or a harvesting machine moves in to harvest 10 per cent of the trees in commercial forests in Central Europe. In natural forests, it is the death from old age of a mighty mother tree that leaves surrounding trees without support. That's how gaps in the canopy open up, and how formerly comfortable beeches or spruce find themselves wobbling on their own root systems.

The thickness and stability of a trunk build up as the tree responds to a series of aches and pains. In a natural forest, this little game can be repeated many times over the lifetime of a tree. Once the gap opened by the loss of another tree is overcome and everyone has extended their crowns so far out that the window of light into the forest is once again closed, then everyone can go back to leaning on everyone else. When that happens, more energy is put into growing trunks tall instead of wide, with predictable consequences when, decades later, the next tree breathes its last.

Laboratory Learning

If trees are capable of learning (and you can see they are just by observing them), then the question becomes: where do they store what they have learned and how do they access this information? After all, they don't have brains to function as databases and manage processes. It's the same for all plants, and that's why some scientists are sceptical and why many of them banish to the realm of fantasy the idea of plants' ability to learn.

But, once again, along comes the Australian scientist Dr Monica Gagliano. Gagliano studies mimosas, also called "sensitive plants". Mimosas are tropical creeping herbs. They make particularly good research subjects because it is easy to get them a bit riled up and they are easier to study in the laboratory than trees are. When they are touched, they close their feathery little leaves to protect themselves. Gagliano designed an experiment where individual drops of water fell onto the plants' foliage at regular intervals. At first, the anxious leaves closed immediately, but after a while the little plants learned there was no danger of damage from the water droplets. After that, the leaves remained open despite the drops. Even more surprising for Gagliano was the fact that the mimosas could remember and apply their lesson weeks later, even without any further tests.[21]

It's a shame you can't transport entire beeches or oaks into the laboratory to find out more about learning. But, at least as far as water is concerned, there is research in the field that reveals more than just behavioural changes: when trees are really thirsty, they begin to scream. If you're out in the forest, you won't be able to hear them because this all takes place at ultrasonic levels. Scientists at the Swiss Federal Institute for Forest, Snow and Landscape Research recorded the sounds, and this is how they explain them: vibrations occur in the trunk when the flow of water from the roots to the leaves is interrupted. This is a purely mechanical event and it probably doesn't mean anything.[22] And yet?

When I think about the research results, in particular in conjunction with the crackling roots I mentioned earlier, it seems to me that these vibrations could indeed be much more than just vibrations: they could be cries of thirst. The trees might be screaming out a dire warning to their colleagues that water levels are running low. ∞

About the Author:

Peter Wohlleben, born in Bonn in 1964, is a German forester who spent more than 20 years with the Forestry Commission before leaving to put his ideas into practice. He manages a beech forest for his home community of Hümmel, conducts woodlands tours and works towards the maintenance of healthy trees and the restoration of primaeval forests. He has written many books on trees and ecology, most recently *The Hidden Life of Trees: What they Feel, How they Communicate: Discoveries from a Secret World*. Wohlleben is featured in the 2016 film *Intelligent Trees* with forest ecologist Dr Suzanne Simard of the University of British Columbia, Vancouver, Canada (see review in this issue). For more information, visit http://www.peter-wohlleben.de/english/.

Editor's Note:

This article is an edited excerpt from chapters two, four and eight of Peter Wohlleben's book *The Hidden Life of Trees* (Black Inc., Melbourne, 2016; first published in German as *Das geheime Lebel der Bäume* by Ludwig Verlag, Munich, 2015). Endnote numbering in the book is retained in this excerpt. See the review in this issue of NEXUS. Copies of the Black Inc. edition are available from http://www.nexusmagazine.com.

"AWAKENING OF 12 STRANDS"

This movie talks about a very rare topic which is the Archonic soul bounty hunting, life after life. The lead character "Jasmin" was part of the JFK administration, exposing the elite agenda and later on assassinated. In her next life she reincarnates as a highly targeted individual, that is (bullied, harassed, turns to drugs and crime, mind controlled with military technology and energetic Archon implants; also a HIV patient and much more). She then suddenly awakens due to a positive "encounter", and her DNA starts to activate, Giving her real human abilities. This feature movie is about human DNA, time travel and how to go back to any manipulated situation and change your reality to what it should be. UFO disclosure; new humanoid extra-terrestrial race named C; parallel realities and time travel; mind control and different forms of manipulation; political and pharmaceutical corruption and the non existence of HIV and much much more .....

DOWSING AND THE EFFECTS OF EARTH RADIATION

by Harald Tietze © 1988–2017

Earth radiation is part of the natural environment and it influences all living organisms. The civilisations of Africa, Asia, South America and Europe recognised Earth radiation and made allowances for it in their daily activities. In China, it is an old custom, dating back thousands of years, to determine suitable positions for new buildings with expert diviners. The ability of Earth rays to slow down the process of decomposition was used by the Egyptians for mummification. Old Germanic and Scandinavian legends frequently mention the use of the divining rod. Then in the Middle Ages, divining for Earth radiation was rejected as superstition.

Only since the beginning of the 20th century have the far-reaching effects on health of this radiation been recognised again. Although Earth radiation is a contributing factor in disease, it also has positive effects. It stimulates and activates our physical and spiritual reserves. Our ancestors erected their places of worship over zones of radiation, and this is a practice still followed today by more "primitive" people.

The term "geopathogenic" is derived from *geo*, meaning "earth", and *pathogenic*, "to cause illness", and it is used by science to describe these "radiation zones". Under this umbrella term, there are various types: for instance, magna rays, scatter rays, Earth faults, Curry nets, Earth magnetic fields, cosmic energy shadows, etc. Best known is water vein radiation.

Earth radiation causes a state of tension in the living organism which results in short-term improvements of performance; but long-term exposure, particularly during sleep, results in a debilitating, geopathogenic influence.

Earth radiation disturbs and interferes with the normal interaction between hormonal and nervous systems. The interplay of glands, hormones and nerves may, depending on the intensity and duration of the radiation, lead to mutation of body cells. In the case of trees, it leads to a change in the structure of the wood.

Our body has a limited ability to deal with disturbances, but it cannot cope with continuous tension or stimulation. Much of our state of health is directly influenced by radiation, as observed with cramps, depression, insomnia, bed-wetting, asthma, pains on weak spots of the body, etc. More problematic, however, are the illnesses which result in permanent damage. For instance, there is considerable statistical evidence for the direct correlation between geopathogenic radiation and cancer.

Fluctuations in Water Veins

Changes in Earth radiation, particularly in its intensity, are very likely caused by the Moon. One experiences the highest radiation during a full moon and decreasing radiation with a waning moon. While radiation lines sometimes disappear totally, new fields can appear in different locations.

In Central Europe, fluctuations are known, but they are relatively small and appear periodically. Water veins do change in their width, but only slightly or not at all.

In Papua New Guinea, water vein radiation is similar to that in Europe: subject to minimal fluctuation, although there's a common occurrence in the appearance and disappearance of huge water veins. The cause of this is likely to be localised high-level seismic activity.

Australia has a high incidence of continuous water veins. However, fluctuations in their intensity are some of the most dramatic anywhere on the planet. The reason for this is the ancient nature of the continent and the extreme climatic conditions. Long periods of drought are followed by periods of flood, resulting in the shrinking and the reactivating of subterranean watercourses. The huge artesian basins are also subject to Earth

During drought in 2007, the capacity of Lake Hume in New South Wales and Victoria, Australia, was at just four per cent.

radiation, making it very difficult in those areas to find a permanent, unradiated place of residence.

Reading Nature's Signs

Plants cannot select their location, nor can they avoid detrimental environmental change. With animals, there are species which are not affected by Earth radiation or even seem to benefit from it. Plants by their growth habits and their diseases give much information about subterranean Earth radiation. Trees with cancerous growths cannot escape the notice of even those least interested in Nature.

The growth patterns of trees exactly indicate to us the alignment and even the direction of water veins. Radiation forces the trees into growth patterns that are unnatural to the species. Skilful dowsing depends on an ability to read the clear signs of Nature and interpret them correctly.

Every person has this sixth sense, frequently demonstrated by the behaviour of children. When we become educated, this intuitive sense is replaced by logical and numerical thinking. So we come to the conclusion that when there are no instruments to measure Earth rays, there are no Earth rays. The things we cannot prove don't exist. For radioactivity, we have a Geiger counter, and for electricity a voltmeter; for the warning signals of Earth rays, only our subconscious. For our own protection, we have to rediscover this ability and perfect it.

Advice on Divining Rods

To find Earth radiation is simple and inexpensive, and has nothing to do with supernatural abilities. Anybody with a wish to learn has succeeded, which has led me to the conviction that everyone can find these disturbing influences with the aid of a divining rod.

Surely, beginning dowsing is difficult and you need to seek the advice of an experienced dowser to check the readings. Both can prepare a sketch for comparison.

The most-used traditional rod is the willow branch. My father and my grandfather used this type of rod. I learned 15 years ago about the steel rod, and only began to use the double-wire rod five years ago.

From my experience, beginners learn best with a double-wire rod. Often the attempts with the willow rod prove to be unsuccessful in the beginning; but once a wire rod is tried, the learner is successful. A drawback of the wire rod is that strong wind may affect the reading.

A willow rod and a pivoting steel rod should tilt slightly upwards, with the back of the hand pointing towards the Earth. When crossing the radiation lines, the rod turns powerfully downwards.

The double steel rod is held very loosely in the hands. With most support given by the little finger, the thumb should not be crossing on the bend of the wires. The hands should not touch but should be at least 10 centimetres apart. The rods should be held slightly lower, and when crossing veins the rods will move upwards and cross.

The traditional willow rod is cut fresh from the tree. Other types of wood may also be used. The ends should be pliable and the rod not too heavy. The steel rod may consist of one piece of wire or two pieces of similar length, bent so that one leg is eight centimetres long and the other, at right angles to it, 30 to 60 centimetres long.

Different materials are suitable. I use coathangers, sometimes plastic coated. Old, rusted, fine fencing wire may be used. Some of the best dowsers I have come across had the simplest of instruments.

Animal Sensitivities

Most animals react strongly to the presence of water veins, just as human beings do. The difference is

that we dismiss the sense in our concentration on rationality.

The organs and the alimentary tract of the pig are similar to those of the human. Observation of domesticated pigs shows that they have a high degree of sensitivity to Earth radiation. I observed the situation where 100 sows were put into a special stable in preparation for the arrival of the piglets. The mother pig would seek a position away from the Earth radiation, and her piglets would also move there after a short warming-up under the heater. The rate of squashed piglets in this particular box was much higher than for any of the other boxes, where the piglets spent a good deal of time around the heater. The restless piglets in the box that was subject to Earth radiation had a higher incidence of sickness and a lower growth rate. Other influences, e.g., draughts, did not affect this observation.

Hens are also very sensitive to Earth radiation. They are kept to provide fresh, uncontaminated eggs and should therefore be housed in a location which is comfortable for them. Often, hens avoid the quarters that are provided and do not use the perches but roost in other places. They spend the night on the floor in a corner, though a comfortable perch exists. In such cases, the cause is undoubtedly Earth radiation.

There may be an explanation here for the use of cat skins in many countries for the alleviation of rheumatic complaints. Are we perhaps dealing with a type of homeopathic effect? Why aren't warmer, softer furs of other animals used for that purpose?

Indigenous Experience

In my work with the complex issues of Earth radiation, I find that many questions cannot be answered, and that any answer raises further questions. Several claims made by experienced dowsers have occupied me over many years. One of them is: do "primitive" people understand the connection between Earth radiation, water veins and their negative effects on health?

Papua New Guinea seemed to me to be the best place to find answers to this question. The largest part of Papua New Guinea is untouched by our civilisation. Houses and paths between the villages as well as the locations of the villages are not planned in some distant office but are determined by the instinctive decisions of the natives.

It happens now and again that the entire population of a village, having occupied the site for many generations, will abandon it for no apparent reason. An entirely new village, sometimes only several kilometres away, is built in the thick jungle. Why do these people make this enormous effort of leaving and establishing a new village?

The history of the abandoned village of Garagassi–Gorendu was well documented by the Russian explorer Nikolai Miklouho–Maclay. He lived there for several years and visited many neighbouring villages. About 100 years ago, many people died of various diseases. Some houses were more affected than others. The possibility of an epidemic was discounted because the tribe was in close contact with several other tribes and none of those had a record of such diseases. We checked the previous densely populated site. A radiation belt, wider than the old village, was found criss-crossed by a series of smaller lines, and this appeared to have been the cause of the disaster.

Many other abandoned villages are known in Papua New Guinea as well as in Fiji, where I looked into this matter. These villages have an enigmatic story in common, told by the surviving elders. Suddenly people, some very young, died of different, unexplained diseases. Premature births and infertility increased. The descriptions of the plight do not fit the typical pattern of an epidemic or a pest plague, which may have been suspected reasons for abandoning the villages. Pigs are said to suffer problems in these situations—a further reason for the desertions, since pigs are highly valued as a kind of currency by the native people.

The reason for the disasters overtaking these unfortunate villages seems to be the occurrence of Earth radiation alone. Seismic activity, common in Papua New Guinea, could explain the sudden occurrence of the radiation in such breadth and intensity. It's no surprise, then, that the natives believed in curses by hostile tribes or avenging ancestor spirits.

Radiation's Negative Effects

Earth radiation assists, amplifies or triggers disease. Our body, to a certain degree, compensates for the negative effects of Earth radiation, but it is only a matter of time before the weakest part of our system will succumb. This process is hastened by genetic disposition and other negative influences.

The most detailed statistical evidence so far in regard to Earth radiation has been established for cancer. Over the years, I have observed many people who, according to my theory, should have enjoyed good health but did not. My assumption was based on their natural diet, sufficient exercise and emotional wellbeing, and many were living in a rural, coastal, relatively unpolluted environment

along the East Coast of Australia. Medical investigations undertaken on my advice revealed cancer. In some cases, previous owners of the houses also suffered from cancer.

Although I am aware of a series of other cancer-causing factors in today's world, I have yet to find a cancer case (skin cancer excepted) without long-term Earth radiation exposure in bed or at work. Similar connections have been found for depression, bronchitis, insomnia, bed-wetting and rheumatism.

We know Earth radiation mainly by its devastating outcomes, which logically increases our desire for solutions. Since we do not yet possess measuring instruments to demonstrate the radiation phenomenon and effects, we are depending on the sensitivity and behavioural indicators of plants, animals and humans. This situation, understandably, creates a climate for misuse by charlatans. It is therefore particularly important that as many people as possible develop dowsing skills and experience.

(Source: Harald Tietze, Earthrays: The Silent Killer?*, 1988, edited from a compilation published in the* Journal of Borderland Research*, vol. 45, no. 4, July–August 1989, http://tinyurl.com/y9ghafhb)*

Geopathic Stress and Cancer

1929: In January, German scientist Baron Gustav von Pohl, a talented dowser who believed that Earth radiation affected tree growth, animal behaviour and human health, set out to prove officially that cancer deaths only occurred in people who had been sleeping in beds positioned above a powerful water vein (underground stream).

In collaboration with the Berlin Centre for Cancer Research, von Pohl dowsed and recorded his findings in the town of Vilsbiburg in southern Germany. Using his own Pohl scale of Earth radiation, the scientist mapped Earth energy lines in the town and compared them to

Vilsbiburg, in Bavaria, Germany (Photo: Mathias Plonka)

the records of the district hospital. It was found that every single one of the 48 recently recorded cancer deaths occurred in people who had been sleeping in beds standing exactly above one of the powerful water veins that von Pohl had mapped before seeing the medical records. The district physician, Dr Bernhuber, confirmed the accuracy of von Pohl's stated correlations.

1930: The Berlin Centre for Cancer Research accepted von Pohl's findings and published the information in its July journal, positing that Earth radiation could be a causative factor in cancer.

Baron von Pohl wrote a book (*Earth Currents as Pathogenic Agents for Illness and the Development of Cancer*) on his work, and a number of German doctors began working with the material to help their patients.

1950s: German medical doctor Ernst Hartmann, MD, spent decades researching the phenomenon. He found that if people worked or slept over the meridians of Earth energy, they could suffer from heart attacks, insomnia, chronic asthma, migraines, backaches and cancers.

He discovered that constantly disturbed and crying babies would settle immediately when their cot was moved. He also found that sleeping on a north–south line made people prone to cramps and rheumatism, and an east–west line made them prone to inflammation. But most notably, he documented three generations of a family who had all slept in the same bed in the same house where two "Hartmann lines" intersected and who had all died of stomach cancer.

Starting in 1953, Dr Hartmann published his observations on the connection between the incidence of unexplainable diseases and Earth radiation, recording his experiences from a medical viewpoint.

1970s: Austrian schoolteacher and dowser Käthe Bachler started one of the most extensive research projects into the Earth radiation phenomenon. Working in collaboration with medical doctors, Bachler dowsed over 3,000 sleep and work places in 14 countries, interviewing 11,000 people. In next to all unexplainable cases, they found Earth rays to be the cause of the disease.

Not only did Bachler find that 95 per cent of the "problem" children whom she'd investigated slept in beds or worked at desks placed at harmful sites, but she also checked 500 cancer cases: every person was found to be sleeping over harmful radiation.

1985: Veronica Carstens, MD, the wife of Karl Carstens, a former President of Germany, published a study stating that there were 700 cases documented worldwide in which terminally ill cancer patients regained their health without any conventional treatment after their sleeping area had been moved from a geopathic stress zone. All of these cancer patients had been "given up on" by their doctors. ∞

The Cosmovision of the Incas

Machu Picchu, Perú (Photo: Skeeze, pixabay.com)

Esoteric writings suggest there was a spiritual link between the Incas and the Western Mystery Tradition, one that may still exist.

by Albert Amao Soria, PhD © June 2017

The Inca Empire

The Incas had one of the greatest empires ever to develop on the American continent. A booklet about the Incas, published by the Organization of American States (OAS), compares the Inca Empire with the Roman Empire at the time of Julius Caesar. The Incas established a highly social and economic society and considered themselves to be the Children of the Sun. The territorial power of the Incas extended from what is now Ecuador, Perú and Bolivia into some parts of Chile and Argentina. The OAS booklet affirms: "So fabulous was the wealth of the Incas in gold and silver, that the conquest of their empire became the burning ambition of the Spaniards who discovered it in the 1520s."[1]

The peak of the Incas' splendour was reached under the kingdom of the ruler Huayna Cápac. At the time of his death, he left the empire fragmented between his two sons, Atahualpa and Huáscar. The empire's succession was disputed by these two sons in a bloody war.

When the Spanish conquistadors invaded Perú in 1532, they found the empire in the final stage of this civil war, which made the conquest relatively easy. Interestingly, the Inca priests were aware of a prophecy, based on cosmological prediction, that the empire was coming to an end.[2] This may be the reason why the Incas didn't put up much resistance to the foreign conquest and resigned themselves to their fate.

In the Inca Empire, there was a highly organised state religion. The official priesthood maintained temples and convents in the main cities of Tahuantinsuyo—the name

of the Inca Empire in Quechuan, the native language of the Incas. The Inca priests resided at important shrines and temples.

The most significant deity in the Incas' pantheon was the Sun god, known as Inti in Quechuan. Inti was usually portrayed as a gold disc with a human face from which rays and flames extended. The second most important deity worshipped was the Moon, called Mama Killa, who was Inti's sister and consort, represented as a silver disc with human features. The stars and thunder were their offspring. It is noteworthy to call attention to the Incas' designation of gold to the Sun and silver to the Moon, as it has some parallel with the ancient esoteric schools as well as with the European alchemists. Another important deity was the Earth Mother, called Pachamama (*Pacha* meaning Earth, and *mama*, Mother). Pachamama was regarded as a living entity and the mother of all earthly life. Furthermore, Pachamama was considered to be the personification of fertility and growth.

The Spanish Inquisition considered the Inca, Maya and Aztec religious beliefs and practices sacrilegious and blasphemous to Catholicism.

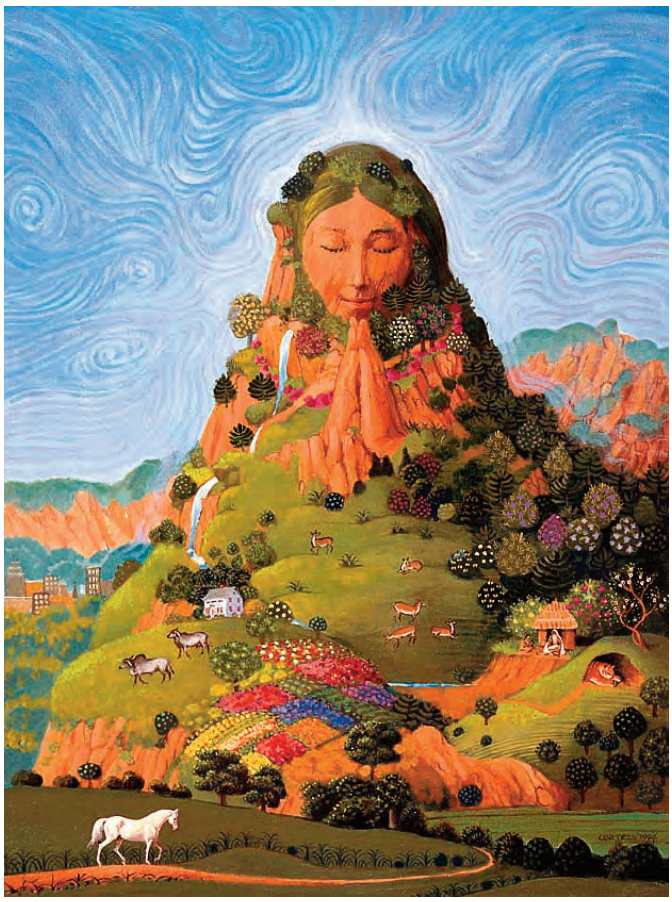
Conquest versus Colonisation

It is important to distinguish between the conquest of South and Central America and the colonisation of North America. The primary intention of the Spaniards who came to the Inca Empire was to strip the wealth from this part of the world. In addition, since the conquest took place under the pretext of the religious conversion of the indigenes, the occupation imposed European values upon the Inca people and quashed their cultural and religious traditions. The Spanish Inquisition considered the Inca, Maya and Aztec religious beliefs and practices sacrilegious and blasphemous to Catholicism.

Something different happened with the colonisation of North America. The Europeans who arrived in North America had the intention of colonising it. They were escaping from religious persecution and wanted a free territory where they could practise their religious beliefs openly. They were also looking for new opportunities for prosperity. Nevertheless, they are not free of blame because they took the North American native lands by force and annihilated or disbanded many tribes.

However, the goals of conquest and colonisation were completely different: in the former, the Spaniards went to Central America and South America with the purpose of subjugating the populations and ransacking the natural resources; in the latter, the European immigrants went to North America to build a new, free country based on the principles of Rosicrucianism and Freemasonry.[3]

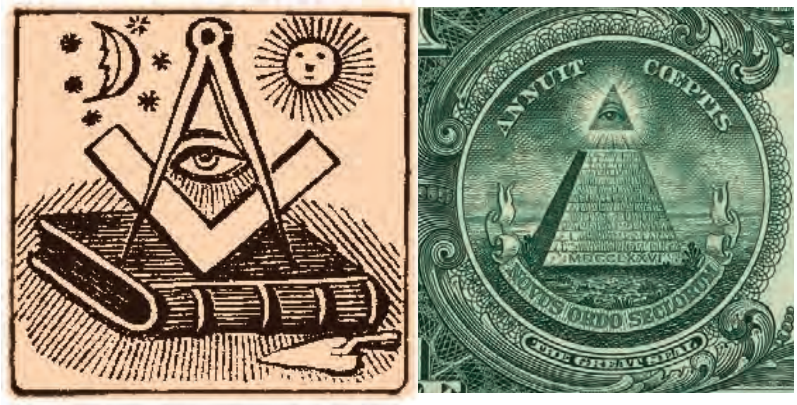
Sir Francis Bacon has been credited for providing the inspiration for the colonisation of the New World, notably



The Pachamama cosmovision represented in art. (Image: culturaincam.wordpress.com)

North America. "Francis Bacon played a leading role in creating the English colonies, especially in Virginia, the Carolinas, and Newfoundland in northeastern Canada."[4] In his novel *New Atlantis*, Bacon envisioned a New World in which all religions are practised freely and without prejudice, in which brotherhood and generosity are common traits of society, and in which education and scientific research are the prime components. Bacon's ideological influence on Rosicrucianism and Freemasonry has been discussed at length by many metaphysical writers without conclusive agreement. Some esoteric writers consider Sir Francis Bacon as the spiritual father of the New World.

The role of Freemasonry in the independence and formation of a new democratic society in the United States of America is undeniable, and there is a growing body of well-researched information that confirms this. For instance, it is well known that the leaders who fought for the independence of the American colonies from British domination were acquainted with the Masonic principles of freedom, equality and brotherhood. George Washington and several of his generals were Freemasons, as were many of the signatories to the Declaration of Independence and the Constitution. Therefore, we can aptly say that many of the leaders who participated in the founding of the United States of America as a nation were



The Eye of Providence, depicted as part of a Masonic symbol and on the reverse of the US one-dollar bill.

inspired by Masonic ideals. The vestiges of this influence can be observed in the Masonic symbol found on the reverse of the US one-dollar bill and the Great Seal of the United States.[5] In addition, the influence of Freemasonry in the history of the USA is reflected in the fact that 15 Presidents were Freemasons.[6]

It is interesting to note that most of the important figures to release South and Central American countries from Spanish domination were also Freemasons: General José de San Martín, liberator of Argentina, Chile and Perú; General Simón Bolívar, emancipator of Venezuela, Bolivia, Colombia, Ecuador and Panamá as well as Perú; poet and professor José Martí, considered the "Apostle of Cuban Independence"; and General Vicente Guerrero, a leading revolutionary in the Mexican independence movement.

Resuming our story, the Spaniards upon their invasion of the Inca Empire ransacked its treasure, destroyed its palaces, temples and roads, and attacked its cultural and religious establishments because they considered them blasphemous according to the tenets of Christianity.

Although the Inca ruler Atahualpa received the Spanish conquistador Francisco Pizarro with great dignity and courtesy, he was captured and imprisoned by Pizarro. Atahualpa faithfully fulfilled the terms of his ransom by filling a room full of gold and another one of silver twice over for his greedy captors. Still, Pizarro treacherously ordered Atahualpa to be put to death.

It is said that the winners write a nation's history. Latin American history was written under the Spanish Inquisition's censorship. So, much of the recorded information about Inca culture was distorted. However, we can recover the true history of any civilisation through its legends, myths and chronicles. In addition, the history of the Inca Empire can be traced through the fragmentary documents left by the Spanish invaders and the *mestizos*.[7]

The Children of the Sun

The history of the Andean cosmovision or worldview needs to be rewritten based on information available from the studies of anthropology, archaeology and mythology. We find here and there hints and traces of information about the real dimension of the pre-Inca and Inca cosmovision.[8] There is a persistent theory indicating that the Incas embodied the final phase of a highly evolved culture which started around the 11th century.[9]

Was the spiritual tradition of the Inca culture related to that of the Great White Brotherhood mentioned by Madame Helena P. Blavatsky in her book *The Secret Doctrine*? Almost nothing is known about the mystical Orders that reportedly dwell in remote parts of the Andes—Orders such as the Solar Brotherhood (Intic Churincuna) and the Brotherhood of the Seven Rays. This is quite understandable because authentic spiritual societies have no need for public recognition or self-promotion. Their teachings are usually orally transmitted to qualified and genuine seekers.

The British esoteric writer and Qabalist Dion Fortune made an interesting statement in her 1929 book *Sane Occultism*: "American occultism will never come into its own until it ceases to import its systems from Europe and India, but goes back along the line of its own tradition, picking up the aboriginal contacts, and daring to bend them to its own evolutionary purposes. *It must seek the contacts of the Sun Temple of Atlantis* through the Maya tradition. Egypt has no message for the United States. Americans can learn esoteric philosophy and science from the Western tradition, just as Europeans can learn from the Eastern tradition, but the initiatory forces cannot be conveyed across the Atlantic or the Pacific. Some day there will come an American who will pick up the ancient Maya contacts, adapt them to modern needs, and

The Temple of Three Windows, situated in the lower section of the Inca city of Machu Picchu, Perú. (Photo: Kevstan)

express their forces in an initiatory ritual which shall be valid for the civilisation to which he belongs."[10] (Emphasis added.) Dion Fortune's message is a wake-up call for all students of occultism and esotericism in the New World.

So, it is evident that the universal mystical tradition was spread out around the world including in Central and South America, notably in the Maya, Aztec and Inca cultures.

Legend tells of a highly evolved civilisation that was destroyed by a series of cataclysms that took place about 11,500 years ago. Evidence for worldwide catastrophes has been presented by scientists D. S. Allan and J. B. Delair in their book *Cataclysm! Compelling Evidence of a Cosmic Catastrophe in 9500 B.C.*[11] Survivors of these disasters migrated to different parts of the world, some moving to the Andean Cordillera through the Eastern Islands (South America). The legend says that Amaru Muru, an initiate of Lemuria in the Pacific, brought the Solar Disc with him and established the Brotherhood of the Seven Rays on the shore of Lake Titicaca at Puno, Perú. The Solar Disc that was later suspended in the shrine of Koricancha, the Temple of the Sun in Cusco, Perú, was removed when the conquistador Francisco Pizarro arrived in the city of Tumbes, Perú. The legend further relates that the Solar Disc was taken to the Monastery of the Seven Rays for safekeeping purposes. This monastery cannot be found because it is hidden in the remote Andean Cordillera.[12]

Serge Raynaud de la Ferrière, founder of the Gran Fraternidad Universal (the Universal Great Brotherhood), a metaphysical institution with several branches in the American continent, mentioned the existence of a hidden monastery in the Andes in his book *The Great Messages*. This statement is endorsed by several other writers. Mark Amaru Pinkham, in his book *The Return of the Serpents of Wisdom*, explicity affirms that the monastery hidden in the Andes is the headquarters of the Brotherhood of the Seven Rays.[13]

The legend of the founders of Tahuantinsuyo, Manco Cápac and Mama Ocllo, as recorded in history books about Inca culture, describes the establishment of the Inca Empire. Peruvian historian Inca Garcilaso de la Vega recounted that Manco Cápac and his spouse and sibling Mama Ocllo were sent by their father the Sun to start a new civilisation at the centre of the universe. Initially they appeared on Lake Titicaca in a boat; from there, they started seeking the centre of the world with a golden staff. After journeying over the highlands from Lake Titicaca, they entered a fertile valley of great beauty; there, on a hillside, they plunged their golden staff into the ground. In this place was founded Qosco, or Cusco, which means "the Navel of the Earth" in the Quechuan language.[14] It became the capital of Tahuantinsuyo, the Inca Empire. From Cusco, the Earth was divided into four directions, and for that reason the empire was called Tahuantinsuyo, meaning "the Land of the Four Parts of the Earth" in Quechuan. Manco Cápac and Mama Ocllo were the first rulers of the empire.

According to legend, Manco Cápac and Mama Ocllo were the founders of Tahuantinsuyo, the Inca Empire.

It is important to note the similarities with Jerusalem in Israel; when it was founded, it was also considered to be "the Navel of the Earth" and was "deemed to be equidistant from the 'four corners of the Earth'".[15]

Koricancha, Temple of the Sun

Dion Fortune pointed out that American occultists must go back to their "own tradition" to find their true spiritual path. Pursuing her advice, I will try to trace the roots of the Andean cosmovision and the initiatory forces that appeared in South America. An old tradition indicates that the people who initially came to this part of the world were from a lost civilisation that disappeared due to earthquakes and catastrophes, as mentioned above. Among the people who migrated to Central and South America were highly evolved beings; they were the ones who built the Maya, Aztec and Inca civilisations.

Fortune erred when she wrote that American occultism "must seek the contacts of the Sun Temple of Atlantis through the Maya tradition". It is well known that the Sun Temple in the Americas was Koricancha, which means "Place of Gold" in Quechuan. Located in Cusco, the capital of the empire, it was the main temple of the Incas. The great Solar Disc was displayed in the shrine of this temple but, as noted, it was removed ahead of Pizarro's arrival and was secreted away for safekeeping.

The Spaniards demolished Koricancha, the Temple of the Sun, in Cusco, Perú, and built the church of Santo Domingo on its foundations. (Photo: Edson Pedrassani)

A digital recreation of the gold-lined interior of the Temple of the Sun at Cusco, based on the account of chronicler Garcilaso de la Vega. (Image: Martinangel)

George Hunt Williamson, who wrote under the pen name Brother Philip, claimed that the Brotherhood of the Seven Rays had become the leading force in the spiritual lives of the Incas, who learned the use of the Disc from ancient records left by the pre-Incas. He also asserted that when the Lemurians arrived at Lake Titicaca, they established a highly spiritual society: "The Inca Emperor at the time was a Divine Mystic or Saint, and he made a pilgrimage to the Monastery at Lake Titicaca, and there Aramu-Muru [Amaru Muru], as Spiritual Head or Abbot of the Brotherhood, gave the Disc to the Emperor."[16]

Although Dion Fortune alluded to Atlantis and Brother Philip discussed the Lemurians, the idea is that a highly advanced spiritual civilisation colonised this part of the world as a result of the destruction of their distant lands.

The OAS booklet *The Incas* gives more detail about the Solar Disc: "The chroniclers, who saw the Temple of the Sun before it was completely stripped of its treasures by the Spanish conquerors, described its interior as literally a mine of gold. From the western wall of the temple, the face of the Sun God looked down from a massive golden disc, thickly encrusted with emeralds and precious stones; the rays of the morning sun irradiated directly on the great plaque, lighting up the interior with dazzling brilliance. The temple's interior gleamed all over with burnished gold cornices, broad golden bands and plates."[17]

The Spaniards, after destroying a great part of Koricancha, built a Catholic church and a convent, which they named Santo Domingo, on top of its foundations, as can be seen in the photograph [see previous page].

The common characteristic among the Inca, Maya and Aztec civilisations is that the mythologies of their origins contain accounts of supernatural beings coming out of the water (the sea or a lake). Their rituals indicate that they worshipped the Sun. This was particularly the case with the Incas, who considered themselves Children of the Sun.

Perú still observes a festival named Inti Raymi, which is literally translated as "Sun Festival". It was celebrated in Cusco in front of the Koricancha temple every year on 21 June, the winter solstice in the southern hemisphere. The celebration of Inti Raymi was moved to 24 June by the Church, Catholicism being the fundamental religion in the Spanish-speaking countries.

The Incas and the Great White Brotherhood

The esoteric tradition asserts that there are 72 Orders comprising the Great White Brotherhood, dispersed all over the world. Among these Orders are the Alpha and Omega, the Order of Melchizedek and the Order of the Essenes, as well as the Brotherhood of the Seven Rays and the Solar Brotherhood, located in Urubamba Valley, the Sacred Valley of the Incas, near Cusco, Perú.

It appears that there was some kind of contact between the mystical organisations of Europe and the secret societies of the Andes. In regard to this theory, the first and most striking hint is found in a manifesto of the authentic Rosicrucian Order of Christian Rosenkreutz from Germany. This secret Order produced three small manifestos: the *Fama Fraternitatis* (1614), the *Confessio Fraternitatis* (1615) and *The Chymical Wedding of Christian Rosenkreutz* (1616). In the *Confessio* is this statement: "…Were it not excellent you dwell in one place, that neither the people which dwell beyond the River Ganges…could Hide anything, nor those in Peru might be able to keep secret their counsels from thee?"[18]

The question here is: was Perú mentioned as a part of the Great White Brotherhood? Bear in mind that the *Confessio* was published in the early 17th century. At that time, the means of communication between continents was mainly through transoceanic travel; there was no telegraph or radio or other physical means of contact. South America was still in its early stage of bloody colonisation, and the power of the Spanish Inquisition was very strong. Therefore, since these were esoteric

Inti Raymi, the Sun Festival, is celebrated at Sacsahuayman, an Inca citadel on the outskirts of Cusco. (Photo: Cyntia Motta)

organisations, it is most likely that their communication was via the astral plane.

The great American Qabalist Paul Foster Case provided the clue to understanding the Rosicrucian announcement when he wrote that the *Confessio* "…was published by the European branch of the world-wide occult society we call the Inner School. Note that it refers to those 'beyond the…Ganges' and 'those in Peru'. Here is a hint that the anonymous writers who published the *Confessio* in 1616 were in communication with the Himalayan Brotherhood 'beyond the…Ganges', and with the strong [mystical] center, located in the Andes, which had been in contact with both the Asiatic and the European groups since long before Columbus sailed to find the Indies."[19]

There are three very important intimations in Case's assertion. First, he mentioned "the European branch of the world-wide occult society" that was in contact with other occult societies; second, he referred to a centre in Perú as "the strong [mystical] center, located in the Andes"; and third, he mentioned that the Andean brotherhood "had been in contact with both the Asiatic and the European groups". This clearly indicates that Case was aware of the secret, esoteric fraternities located in the Andes (Perú) and in the Himalayas.

Helena P. Blavatsky, co-founder in 1875 of the Theosophical Society, in writing about the ancient mystery schools in her masterpiece *The Secret Doctrine*, indicated that the essence of the mystical wisdom is to be found scattered throughout the world, including in South America: "…The members of several esoteric schools—the seat of which is beyond the Himalayas, and whose ramifications may be found in China, Japan, India, Tibet, and even in Syria, besides South America—claim to have in their possession the *sum total* of sacred and philosophical works…"[20]

Brother Philip mentioned that the Fraternitas Rosae Crucis (the Brotherhood of the Rosy Cross) was part of the ancient Orders and retreats scattered around the world and belonging to the Great White Brotherhood.[21] It is believed that before the complete destruction of the Inca Empire by the Spaniards, the Inca high priests escaped to a hidden village in the Andean Cordillera, where they secretly kept safe the ancient knowledge and wisdom of the Solar Brotherhood.

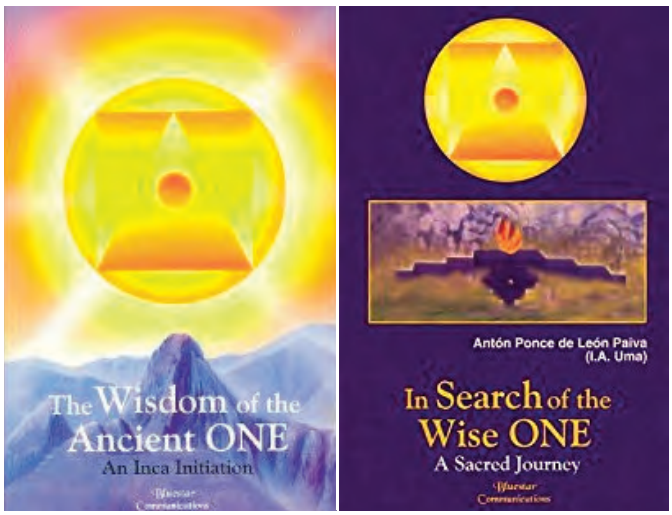
Serge Raynaud de la Ferrière held the viewpoint that Inca spirituality was highly evolved. In his book *The Great Messages*, he wrote about an esoteric fraternity hidden in the Peruvian Andes. According to him, the Andean Cordillera has a special regenerative energy for the Americas such as Tibet used to have for Asia. The Andes will be the place where the mystical masters dwell in the upcoming Water-Bearer (Aquarian) Age. Raynaud de la Ferrière posited the theory that the central point of the Earth's electromagnetic field has been moving from the Tibetan mountains to the high Andean Plateau. He also asserted: "…It is in the safety of an old Inca temple, sacred place where the profane have never come, in spite of the different organized expeditions, where the Missionaries of Aquarius can retire."[22] He indicated that this centre has been zealously guarded and defended over centuries by the Incas' heirs. Thus, we can conclude that Raynaud de la Ferrière was acquainted with the Andean mystical brotherhood.

Ruined structures are a feature of Urubamba Valley, the Sacred Valley of the Incas, near Cusco. (Photo: McKay Savage)

Regarding the theory of the switching of the Earth's geomagnetic fields, several authors and scientific figures have insisted that the Earth's electromagnetic centre has been slowly moving from the Himalayas to the Andean Cordillera. This reinforces Serge Raynaud de la Ferrière's assertion that due to the Earth's geophysical changes the electromagnetic currents that were located in Tibet during the Piscean Age have been moving towards the Andes. In the same way that Tibet and India once played an important role for pilgrimages of gurus and those in search of enlightenment, the Andes is now entrusted with this function in the New Era of Brotherhood and Light. Among the personalities who have proposed this theory were Serge Raynaud de la Ferrière and his disciple, David Ferriz de Olivares.[23] Hence, nowadays, different esoteric and mystical groups make their pilgrimages to the Andes and to Urubamba Valley, the Sacred Valley of the Incas, for spiritual renewal.

Earlyne Chaney, a spiritual leader of the esoteric group Astara, in her book *Lost Empire of the Gods*, affirmed an opinion similar to that of Serge Raynaud de la Ferrière: "The old Peruvian said that in these lost inner-world cities, hidden behind the cordilleras of the Andes, dwell these emissaries from an ancient civilized race. They dwell there in the same majestic palaces and temples, massive courts and lofty towers as did their ancestors."[24]

Arnold Krumm-Heller, MD, a remarkable occultist from



The Wisdom of the Ancient ONE
An Inca Initiation
Antón Ponce de León Paiva
(I.A. Uma)
In Search of the Wise ONE
A Sacred Journey

Germany, founded the Fraternitas Rosicruciana Antiqua (the Brotherhood of the Ancient Rosy Cross) in Mexico in 1927 and created and promoted branches of this society in several South American countries. He wrote many books on esoteric and occult subjects, and he openly claimed to have been initiated into the secret wisdom of the Andes (Perú) by an esoteric fraternity.[25]

Brother Philip in his book *Secret of the Andes* explained that a genuine White Brotherhood is located in a very inaccessible part of the Andean Cordillera near Cusco. He emphasised that access to this White Brotherhood is extremely difficult: in order to reach them, a person must travel some part on foot and some on horseback, and most of the trip is with the eyes covered by a blindfold. He advised foreigners that to attempt to search for these mystical societies on their own would be useless because they would never find them. Any visitors who have been there are not able to say exactly where the location is because they don't know. Apparently, the first contact is usually on the astral level. That is exactly the way to contact the True and Invisible Rosicrucian Order.[26] It is also said that no-one initiates contact with this Order; members of the Order contact the candidate when he or she is ready. This is according to the initiatic tradition: "When the disciple is ready, the master appears."

The above-mentioned authors held the viewpoint that the new spiritual influx in the upcoming cosmic era of the Water-Bearer (Aquarius) will come from the region of the Andes. It is expected that at the right time the hidden monasteries of the Brotherhood of the Seven Rays and the Solar Brotherhood will be activated.

There are striking similarities between the teachings of the Rosicrucians in Europe, the Masters of the Himalayas in Asia and the Intic Churincuna in the Andes.

Peruvian native Antón Ponce de León Paiva, reportedly a member of the ancient Inca tradition who has been in contact with the Intic Churincuna or Solar Brotherhood, has written two influential books, *The Wisdom of the Ancient ONE* and *In Search of the Wise ONE*, in which we see the resemblance between the Intic Churincuna teachings and those of the other occult fraternities around the world.[27] Antón Ponce de León Paiva was chosen by the mystical elders of the Intic Churincuna to be the messenger to spread the Andean wisdom teachings. He is the spiritual founder of Samana Wasi (House of Teaching) in Urubamba Valley, the Sacred Valley of the Incas. Samana Wasi is a retreat centre where homeless children are raised in an environment of love and wisdom based on the teachings that Antón Ponce de León Paiva received from the spiritual masters who reside in the remote Andean mountains. ∞

SIS MACHINES
SILVER IONTOPHORESIS STIMULATORS

ANTIBIOTICS AND ANTIVIRALS REPLACEMENT

FAST INFECTION TREATMENT

Effective for bacterial, viral, superbug, acute, chronic and hard-to-reach infections.

Targeted, direct constant-current delivery of silver ions to the surface or internal infection.

Connects to silver-nylon cloth iontophoresis electrodes for positioning anywhere on the body. Easy and quick to apply.

BIOELECTRIC WOUND HEALING

For infected, slow and non-healing wounds, diabetic ulcers and internal scar tissue.

Stops infection. Reduces pain. Replaces or supplements the wound-generated electric field that controls all wound healing.

Modifies injured tissue cells to 'stem cells' for tissue regeneration.

The Intelligent Supplement

Human evolution demonstrates a self-evident connection between health and trace minerals. No debate. Evidence based science also shows that commercial food processing, petroleum based fertilizers and acid rain (carbon) have degraded our diets of these important components.

The In-Sync Minerals recipe is designed to reduce this risk. It offers an effective, inclusive and safe life choice producing better sleep, more energy and of course greater health.

PLUG INTO THE POWER OF THE UNIVERSE

For over 100 years, the Rosicrucian Order has made available its successful system of personal, home based study that gives you access to the fullest potential of being – physical, mental, psychic and spiritual. In simple weekly lessons you will find that our comprehensive approach makes your learning and personal development process easy.

We invite you to join with us and become part of a worldwide group of men and women dedicated to mystical knowledge in the widest sense.

You can harness virtually unlimited powers of insight, creativity, spirituality. You can attract people and events into your life, speed your body's natural healing processes, create harmony around you. And much more. All you have to do is learn how.

As the first step in discovering just how extraordinary you really are we invite you to read our free introductory booklet *MASTERY OF LIFE* – see it at: www.amorc.org.au or ask for your free no obligation copy by phoning: 1300 88 11 35 or email: mastery@amorc.org.au

The UFO Crash at Aztec, New Mexico

Image: Thomas Budach, pixabay.com

...and conversations with the alien survivor

from a leaked, classified report compiled by the United States Defense Intelligence Agency in 1989

This article is extracted from sections C and D of a collection of leaked Ultra Top Secret/Eyes Only Access documents, compiled by the US Defense Intelligence Agency's Office of Counterintelligence (Agency Report Number 405389), dated 8 January 1989. The documents were leaked anonymously by two retired military personnel on 13 June 2017 to Heather Wade, host of the *Midnight in the Desert* radio program, who then posted them online at http://tinyurl.com/y84kzhcg. Initial analysis by MJ-12 and UFO researcher Stanton Friedman suggests that the documents are authentic and provide new information about the highly secretive MJ-12 group. The documents also seem to confirm the existence of extraterrestrial human-like beings.

The typewritten report is barely legible in many parts, but we have reproduced it as faithfully as possible, retaining grammar, spelling and punctuation. We have followed obvious typographical errors with "[*sic*]", expanded on names/abbreviations in brackets, and italicised words that are underlined for emphasis in the original. – Editor

AZTEC, NEW MEXICO (25 MARCH 1948)

On 25 March, 1948 at approximately 16:19 (4:19PM) hours, Mountain Standard Time (local time, or LT), a disc-shaped flying machine came down about twelve (12) miles northeast of the small community of Aztec, New Mexico. The controlled landing occurred in a small desert canyon on the private grazing land of a local farmer and rancher…

page C-2-of-10

The disc-craft was recovered and the LZ [landing zone] declared secured by 22:45 hours LT through the actions of an IPU [Interplanetary Phenomenon Unit] scout team sent to the Hart Canyon area. Meanwhile, General [George C.] Marshall had contacted Dr. Vannevar Bush – scientific head of MAJICOPS – and a joint IPU/MAJICOPS team was assembled under MJ-12 command for the purpose of investigating and clearing the LZ, or crash site. The local rancher who owned the land and [redacted] were held incommunicado while the field analysis and subsequent clean-up was [*sic*] conducted at Hart Canyon. Visiting with the rancher at that time and planning to hunt for game animals on his land, were the owner of a local radio repair shop plus a [*sic*] unemployed oil hunter and inventor. These last two parties were later to get together and tell their story to a columnist from Variety Magazine named Frank Scully. This author later published a book in 1950 detailing parts of the Aztec recovery story. This breach of security was occasioned by the use of a cover story for the IPU/MAJICOPS workers that proved to be ineffective. It was decided to disguise the Aztec efforts as an exploration for oil by a fictional drilling company, a fact that was not in agreement with the knowledge of the unemployed oil hunter who knew that there was no oil in the area. Later both this independent oil hunter and the columnist Scully were discredited by facts leaked to a writer at True Magazine by covert operatives of the MAJESTIC Enforcement Division. This action was unfortunate but very vital in light of the sensational nature of the Aztec discoveries. Fortunately, Scully labeled this fortune hunting oilman as a "scientist" in his book and during the period of the book's sales, this adventurer was convicted of fraud for trying to peddle a device he claimed would find oil! Mostly by luck, the security breach healed itself and the book was quickly forgotten with only minor help from MJ-12…

In order to fully follow the course of the Aztec, N.M. recovery and investigation it is important at this point to detail the names and the backgrounds of the members of the IPU/MAJICOPS team before returning to a chronology of the events at Hart Canyon. Only four of these persons were on the MAJICOPS directorate. These were: Dr. Lloyd Berkner, Dr. Detlev Bronk, Dr. Vannevar Bush, and Dr. Jerome Hunsaker. Their biographies may be found in the preceding file of the Roswell, N.M. incident.

The following were selected by the MJ-12 directorate to accompany the IPU/MAJICOPS recovery team to the Hart Canyon landing site:

- Dr. Carl. A. Heiland…
- Dr. John von Neumann…
- Dr. Robert J. Oppenheimer…
- Dr Johann von Roesler…
- Dr. Merle A. Tuve…
- Dr. Horace van Valkenberg…

page C-6-of-10

…The greatest discoveries were made on the lower level, dubbed the "cargo hold", but the team of investigators did not immediately find the closed door or hatch to this compartment. Instead they found

themselves in a small circular chamber about the size of an elevator cab. A spiral ramp of very steep incline led up around a center post to the upper chamber dubbed the "flight deck". Since the team had already observed some details of this upper chamber and had observed the bodies of two (2) small creatures slumped in chairs, it was decided to investigate these first in case they might be alive.

Inside the upper cabin room the team found the bodies of two (2) small humanoids about four feet in height and strapped into seats like those in a jet cockpit (acceleration couches) which faced a row of instrument panels built into a curved countertop circling the cabin just below the portholes they had previously seen from outside. The extraterrestrials were dead…

page C-8-of-10

…Inside the cargo hold were found a number of what appeared to be scientific work tables and medical examination tables. Just as Dr. Bronk was about to suggest that the "cargo" routinely carried might be a biological or even human one, Dr. van Valkenberg found a number (14) of small tube-like chambers built into the wall beside a clam-shell couch that looked like it would close to contain a human body. This couch was fitted with hoses for filling it with some liquid or gas when the two sections would come together and seal. A closer look at the sealed tubes which looked like the doors of clothes dryers at a laundromat revealed that they were a complex form of refrigeration system. Two were empty and twelve contained the bodies of what looked like human adults and small children as well as infants, all frozen as if preserved for specimens…

page C-9-of-10

In the process of transfering [*sic*] the frozen EBE [extraterrestrial biological entity] bodies from their capsules, in the cargo hold of the disc-craft, to containers of dry ice for shipment, Dr.s Bronk, von Roesler, [Paul A.] Scherer and two Army pathologists from the IPU were amazed to discover that one of the small humanoid adults, similar to the "pilots" found deceased on the flight deck, had thawed out with a pulse, limited respiration and had lived in an unconscious state for several minutes before expiring. The shocked scientists then realised that the capsules were actually cryogenic suspension chambers and that the EBE's [*sic*] were still technically alive inside them…

Two separate laboratories were set up at the Los Alamos site. One was for the detailed photographing and cataloging of each component of the disc-craft and the effort to decipher the forms of writing found onboard. The second facility was organized around the efforts of teams of doctors led by Dr. Detlev Bronk, to attempt the revival of the craft's occupants. Neither group knew what was the purpose or progress of the other's research…

Deep sleep in a cryogenic suspension chamber, as seen in the Stanley Kubrick film *2001: A Space Odyssey*.

page C-10-of-10

Eventually, the medical team was able to resuscitate one adult Earth-like humanoid male and three (3) Earth-like humanoid infants, all about six (6) months of age; two male and one female. The rest of the infants and one more short, grey-skinned, large-headed humanoid EBE, perished in the attempt to revive them. This was largely the result of Dr.s Bronk and Bush having decided to experiment first on the infants, who were of little intelligence value, in the hope of reviving the short EBE and the adult humanoid for a detailed debriefing.

The adult, Earth-like humanoid male turned out to be, himself, an EBE. But he spoke perfect English with a slight and untraceable accent and exhibited many telepathic and psychic skills as well. This EBE was, in his general appearance, completely human; internally, there were only slight differences in the formation of the heart valves, pancreas, lungs and he possessed two livers and an unfamiliar organ where the gall bladder would be in an earthman. Also, his digestive and gastro-intestinal systems were simpler and less able to process the wide range of foods that earthmen are used to. He was surprised to discover the scientists had unfrozen him alive, but was otherwise undisturbed to find himself in the company of earthmen. He stated within minutes of regaining consciousness that his only surprise would have been if the investigators had not chosen to "hold me captive out of your honest curiosity". After a hasty tele-conference with President Truman, it was explained to the visitor that if his intentions proved to be non-hostile and he cooperated in an information exchange, he would be granted diplomatic status and soon be repatriated to his own kind when the arrangement could be made. To this he readily agreed, provided he was not asked to give away any scientific secrets that could alter the course of our natural cultural development.

All together, the Aztec EBE lived under our protective custody on the Los Alamos complex for nearly a full year,

from late April 1948 – until March of 1949. After that, he was sequestered at a private safehouse set-up by Army intelligence in rural Vermont, during which time he met with the President and other top government and military administrators, prior to his being returned to his people in August of 1949. He gave the scientists and military debriefers a great deal of mostly non-technical information about his civilization and it's [*sic*] motives for being on our Earth; a total of six hundred and eighty-three (683) pages of transcripts were made of recorded conversations. A condensed version of some noteworthy points from these many debriefing sessions follows at the end of this section.

The EBE saw little harm in allowing us to keep the remains of his space craft for study, since he felt our understanding of it would only gradually develop. He did suggest that his people would "probably have to drop one in similar condition in the laps of the Soviet Union – just for the balance of things to be maintained", and, "You are welcome to take this up with any higher authority you can find willing to listen to you, if you do not approve of this course". The team of scientists were told that the human-like infants were destined for our world anyway, and we were welcome to keep them. On 21 August 1949, the Aztec EBE was returned to his own kind at a meeting site southwest of Kirtland Air Force Base, Texas, and arrangements were made for a future meeting at the same location, to open diplomatic relations.

page D-1-of-7 [+ pages D-2–7]

CONDENSED CONVERSATIONS WITH THE AZTEC, NEW MEXICO EXTRATERRESTRIAL BIOLOGICAL ENTITY (from April, 1948-to-March, 1949)

The following conversations were held over an eleven (11) month interval between various interrogators, labeled here as INT:, and the Aztec EBE. These are reduced from many hours of recorded debriefing, and are included here to give the reader a degree of insight into the character and the personality of the subject. These statements are not intended to provide complete answers to questions. All transcripts of the debriefing and the original tape recordings of the same are available through special request (and with proper clearance) from the DIA [Defense Intelligence Agency] office of counter-intelligence or the MAJICOPS-HQ, code: "DIGGER COMMAND", re: "PROJECT AQUARIUS". These may be procured through the EXCOMCON-NET liaison office at the Pentagon's Joint Strategic Objectives Staff Division (National Defense Section).

INT: "What shall we call you, what is your name in your native language?"

(Image: Rodrigo Carvalho)

EBE: "Oh! Now even that isn't easy for me because you will not get the phonetic pronunciations correct without practice. And I am not able to write it down for you because we do not use an alphabetic printed language that I could translate to English easily."

INT: "Why don't you try it out anyway?"

EBE: "Of course; Sethimus (or Setimus, or Seck-the-mous) will do; that is the first of four names I am known by. In our written language, this would be shown by a single graphic symbol that would explain my entire lineage."

INT: "Why is your written language so different from ours?"

EBE: "Why is yours so different from the Egyptian of thirty centuries ago? Forgive me, but that is not a simple problem. The group I belong to gave up any identification with any one planet, or its culture, before your people learned to make fire. There were once thousands of languages, both oral and written, in our many civilizations. It became important to use symbols to represent whole words and even concepts that all of us held in common. Soon your culture will do the same with public signboards at first. Travel and inter-communications of many people will always cause this to happen."

INT: "Why are you here?"

EBE: "Specifically to bring you these children. And we like trees."

INT: "Would you mind expanding on that?"

EBE: "Certainly; in what direction? You see, we would hate to see you blow-up such a pretty little planet; to ruin so many nice trees. If you only knew how hard it is to make a tree from scratch! People are easy – they follow naturally, but not without trees, of course. Green things must be respected above all else except children, and are very much alike."

INT: "What are the intentions of your government by sending you here? *WHO* sent you and *WHY*? If this isn't the first time, evidenced by your familiarity with English, why haven't there been official contacts made?"

EBE: "(sigh) In reverse order: What? and be strung-up from one of those beautiful trees? Why? Because you sent us an invitation we could not resist, for our own curiosity, as well as safety. We sent ourselves, or I volunteered – take your pick. And we have no government; we outlawed it, or rather we outgrew it. I suppose you can not outlaw a thing without laws, and those require governments, do they not?"

INT: "I don't understand."

EBE: "I know that. Try laughing. You still will not understand, but you will feel better about your ignorance."

INT: "But that's not good enough! Make me understand!"

EBE: "It will have to suffice. One can not teach until a student wants to learn. How good do you want us to be? I will not harm you. We will not harm you or interfere anymore than you want us to. We are only here to offer what you asked for in a manner we know you will accept; and you *did* ask us to come and visit."

INT: "When? Who sent for you? Who invited you?"

EBE: "Almost fifty of your years ago, you sent us signals. You were looking for us, and you scared us with a signal you should not have been capable of sending. So we answered. But you didn't understand our answer then, just as you don't now. We do our best to please others. When you didn't respond to our message to you, and you did not come for a visit, we felt that we really ought to stop by and see how you were doing. It *has* been a long time, and it was the neighborly thing to do, of course. Besides, it was right on the way to another destination; your world, I mean."

INT: "You've been here before?"

EBE: "I know! We were surprised that you had forgotten us!"

INT: "I don't see how we could forget you! Are you serious?"

EBE: "Very seldom. But yes, *your* culture, which now dominates this civilization, did forget us. Actually, your people seem to have undergone a period of history in which you were so afraid of old truths, that you erased them in favor of religious fantasy. Some of your people remembered us orally in their legends, such as those who speak the Nahuatl, Narragansett, or Athapaskan dialects. They lived where we last visited. But the high point of their cultures is long passed."

INT: "I've never heard of them."

EBE: "Not surprising, your history shows that the conqueror seldom preserves any history of their victims. I speak of the natives in this land mass; those called Indians; mostly on your eastern and southern boarders [*sic*] and in the ribbon of land that connects yours to the southern continent. Navahos? Aztecs? Incas? The Olmec's and Toltec's cultures? These were all greater than your own civilization at a time when you were burning witches and killing their cats, which brought a plague that killed millions of your ancestors. Of course, you drove them mad and destroyed them with venereal diseases and smallpox: those you didn't slaughter for their gold."

INT: "Oh."

EBE: "And your social pundits speculate and joke about why we don't land in front of your nation's capitol building and shake hands? We are different, not insane!"

INT: "But we have changed. Western civilization is now the leader in this world; for freedom and humanity."

EBE: "Two things: First, we believe that, or we wouldn't be here now. Also: tell that to the millions of Hebrews your western civilization has destroyed in the past decade, or the millons [*sic*] of Negro families whose sons died to stop the madman Hitler, but who do not have plumbing in their homes as we speak. Yes, you make progress: that is hopeful for you. But emotionally you are very different from us. Not primitive, that label would be pure egotism on our parts, but you are very different and frightening to us. We are trying to learn to overcome those differences before your runaway technology thrusts you upon us without choice."

INT: "We have no space travel capability, how could we harm you?"

"…the person who sent us your first message forty-nine years ago (1899) *did* come from this nation [Yugoslavia] originally."

EBE: "In our terms, you are very close to that point. Do you have small children? Yes? Well, they will grow up in a world where space travel is taken for granted. And before they make you a grandfather, earthmen will be in space."

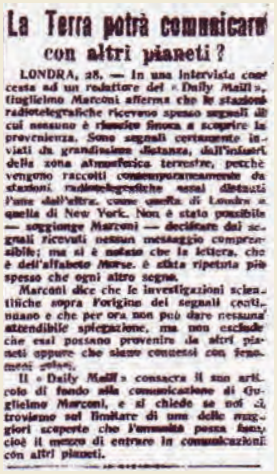
INT: "All right, so you have been visiting us for some time. I have no choice but to accept that, even though I'd love some proof. But you still didn't tell me who sent you the message from Earth that brought you back here?"

EBE: "Funny you should connect those two subjects. If you dig in a place I will show to you on any world map, you will find your proof. Unfortunately, I am now in the wrong country for this, but others of my people will instruct the proper government to dig there if you do not mind. You see, in a remote part of the nation you call Yugoslavia, we visited and helped the people there to build a very advanced culture over seven thousand years ago. It will be found. But there is a beautiful mystery in the fact that the person who sent us your first message forty-nine years ago (1899) *did* come from this nation originally. His transmission was sent from near here, however, in the state you call Colorado."

INT: "Can you tell us his name? Are there any other

Left: Guglielmo Marconi, photographed c. 1896 with his early radio apparatus. **Right:** Article from the Italian newspaper *Corriere delle Puglie*, 29 January 1920, and edited translation.

Will Earth be able to communicate with other planets?



La Terra potrà comunicare con altri pianeti?

LONDRA, 28. — In una intervista concessa ad un redattore del «Daily Mail» Guglielmo Marconi afferma che le stazioni radiotelegrafiche ricevono spesso segnali di cui nessuno è riuscito finora a scoprire la provenienza. Sono segnali certamente inviati da grandissima distanza, dall'esterno della zona atmosferica terrestre, perchè vengono raccolti contemporaneamente da stazioni radiotelegrafiche assai distanti l'una dall'altra, come quella di Londra e quella di New York. Non è stato possibile — soggiunge Marconi — decifrare dei segnali ricevuti nessun messaggio comprensibile; ma si è notato che la lettera, che è dell'alfabeto Morse, è stata ripetuta più spesso che ogni altro segno.

Marconi dice che le investigazioni scientifiche sopra l'origine dei segnali continuano e che per ora non può dare nessuna attendibile spiegazione, ma non esclude che essi possano provenire da altri pianeti oppure che siano connessi con fenomeni solari.

Il «Daily Mail» consacra il suo articolo di fondo alla comunicazione di Guglielmo Marconi, e si chiede se noi ci troviamo sul limitare di una delle maggiori scoperte che l'umanità possa fare, cioè il mezzo di entrare in comunicazioni con altri pianeti.

London, 28 January 1920 — In an interview granted to an editor of the *Daily Mail*, Guglielmo Marconi claims that radiotelegraph stations often receive radio signals whose origin nobody has succeeded in discovering until now. These signals are surely sent from a great distance, outside the terrestrial atmospheric zone, as they are picked up at the same time by distant radiotelegraph stations like London or New York. It has not been possible, Marconi adds, to decipher a comprehensible message, but…the letter, which is of the Morse alphabet, has been repeated more often than any other symbol.

Guglielmo Marconi says that scientific investigations over the origin of the signals continue, and for now he can't give a reliable explanation but does not exclude that they come from other planets or are connected to solar phenomena.

The *Daily Mail*…wonders if we are on the limit of one of the greatest discoveries that humanity may make: the means of entering into communications with other planets.

proofs of your earlier visits?"

EBE: "Thousands of proofs, if you look around. The scientist I spoke of was an electrical researcher named Nikola Tesla. You are old enough to have heard of him when he was still alive. You know, I just thought of a very good puzzle for someone of you to solve: on an island you named the Isle of Pines in your Pacific Ocean, you will find what is left of a concrete landing platform we built there one hundred and fifteen (115) of your centuries ago. You can not miss finding *that*, since the footings we put down still cover many acres. Look for those if you would like to; no culture on your planet could have built them at that time. It would be fun for me if you ever locate them, because my great-grandfather helped to pour the mortar for them!"

INT: "What! How long do your people live?"

EBE: "Somewhat *too* long, I think at times. We have built-up our age somewhat. It would vary, but I was alive when your whole continent was practically a question-mark on the sea charts."

View of Kanumera Bay, Isle of Pines, New Caledonia (Photo: Bahnfrend)

INT: "What about these babies we found with you? Are they human? What are we supposed to do with them?"

EBE: "Raise them, of course, as I would have done. Certainly they are human; perhaps more-so depending on whose definition we use. You are too far away from understanding the whole science of bio-engineering yet for this to be sensible, but just accept that we have sown the seeds of a rich harvest for your culture. And this will continue. They are only children, not monsters. But raise them well, please, because the care of children is one of a few things we do not laugh about."

INT: "I remember this man, Tesla, you spoke of; he died during the war (1943), but I never heard that he tried to contact other worlds."

EBE: "It was in all the papers, along with the story of how he was always being taken to court by his neighbors for creating lightning which struck their properties. Besides, when Tesla wouldn't answer, we sent a reply to your great inventor, Marconi, that we had arrived for a visit."

INT: "Really? When was this? I'm sure he never reported it!"

EBE: "You see how you hear, but don't really listen? Again, it made all the papers. We'd just arrived here in, oh, 1920 or '22 (it was 1922), and we sent him the letter *Y* in his own code. It meant that he had visitors! He told everyone that he knew for certain that the signal came from outer space, but nobody really listened. Well, after that we began to figure out that your man Tesla was *way* ahead of the rest of your science! Even by accident, he shouldn't have learned how to do what he did in his lifetime."

INT: "Why did it take twenty years for you to answer Tesla's message?"

EBE: "It did not. We answered it immediately! Oh! I see! Our *arrival* took twenty-two (22) years, not twenty, because that is how long it takes to get here from where we were when we got Tesla's invitation."

INT: "So long! You took such a far journey just to find us, and didn't even contact us?"

EBE: "As I said, it was on the way to somewhere else we were planning to visit anyway. Besides, how long or far is all relative, is it not, when we live as long as we do? And you do not see even now that we *always* live in space. We outgrew our origin worlds many generations ago. In fact, you have to try and understand that *you* are really living in space too. The only difference is that we left our natural planet and built a new home to go where we wanted. You did the same thing when you left your caves and built huts; and for the same reason. So it's all relative."

INT: "But why not contact us after such a journey?"

EBE: (laughing) "I am sorry! But you *still* do not see! We *did* contact you. We *are* contacting you: all to the limits of your ability to hear our message. I keep telling you that it is *relative*! Please! Laugh about it! I am trying to explain a limit to your perception which is *caused* by your limited perception! Do you see the wonderful paradox?"

Nikola Tesla in his Colorado Springs laboratory c. 1899; photomontage from *Tesla: Man of Light* (Image: Maya Media Inc., vimeo.com)

INT: "If you say so, but such a trip has no purpose in our way of seeing things."

EBE: "Of course not. That is why we do what we do. Listen now, because this could go on forever if you do not. We are at home where ever we park our craft. It is *huge* by any standards you could apply! We are concerned because this area of space is one we cross regularly as a simple matter of course, like your campers who vacation at the same place every year. Suddenly we find our camping site threatened by bears! But bears are protected, you are not supposed to hurt them; so you must tame them or give up the whole vacation. Do you see that although you are a long way from travel to other stars, by *our* standards, you will be overrunning the whole area by the next time our *children* pass by here? Do you see why it is vital, unless you destroy yourselves first, for us to tame you now: before you come to us? Would you let savage headhunters roam the streets of a city without sending them to school first? We cannot interfere with you anymore than you would interfere with bears in your parks. Someday we would rather you joined us, visited our worlds where we *do* make camp, and joined us on our long voyage of discovery. Or not. It is your destiny, as long as you do not try and alter ours. Try and grow into *our* perspective, and *all* the illogic you question will seem very reasonable. It is all a matter of *scale*. Centuries instead of decades. Someday you will be just about like us, and you will see. Some new, short-lived species will think you are a crazy metaphysical paradox too. And you will have to learn to treat them gently as children, without letting your egos get in the way."

INT: "But with your science, you could make any world your own personal paradise; why live in spaceships?"

EBE: "Yes, and with our weapons we could take what we want as well. But why *have* one world when you can *see* them all? You all covet land, a very old idea and only natural when the supply is limited. Just try to accept that we are *in* paradise when we are seeing and understanding something new. Our god is change and our religion is understanding. Searching for truth is our greatest social challenge and purpose. When you build up your age, this will become as clear to you as why you must breath [*sic*] air."

INT: "It sounds like yours is the ideal, perfect world."

EBE: "No. When you have more years, filling them profitably is a real problem. And the trouble with being a loving species is that you want to prove it by making more of your kind with a partner you love. Of course this must be closely regulated in a culture such as ours, and so relationships of an intimate nature are difficult to leave to one's heart."

INT: "You speak of the heart being the seat of emotions. This is a concept we use on Earth, but we know it to be a sort of romantic fiction. Why does an advanced race like yours maintain such a notion?"

EBE: "Well, I used that particular expression for your benifit [*sic*]. But why do you object to romance? Your species is driven by little else except romantic vision. Why not ours as well? Certainly our way of life must seem romantic to you? It does to us. We write poems and express ourselves with works of art just as you do. Many

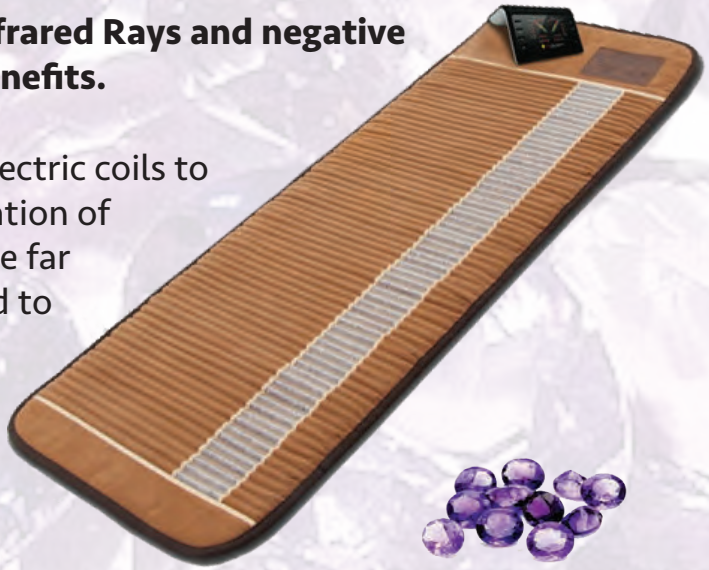
Imagine sleeping…

The BioMat produces soothing Far Infrared Rays and negative ions, delivering a wealth of health benefits.



Unlike an electric blanket which uses electric coils to create heat, the BioMat uses a combination of fabrics and amethyst stones to generate far infrared rays which are then transferred to the body as heat. The heat comes from friction generated within the body through the effects of far infrared rays. Far infrared rays warm the inside of your body and the part of your body making contact with the BioMat.

I use the BioMat at home (when it is my turn) on both the office chair and the bed. Once you start using it you won't stop.

For the past two years I've watched this product being used by practitioners and patients for a variety of health problems and the results are quite spectacular. Every practitioner should have one of these on their treatment table. I can't recommend it enough.

Duncan Roads, NEXUS Editor

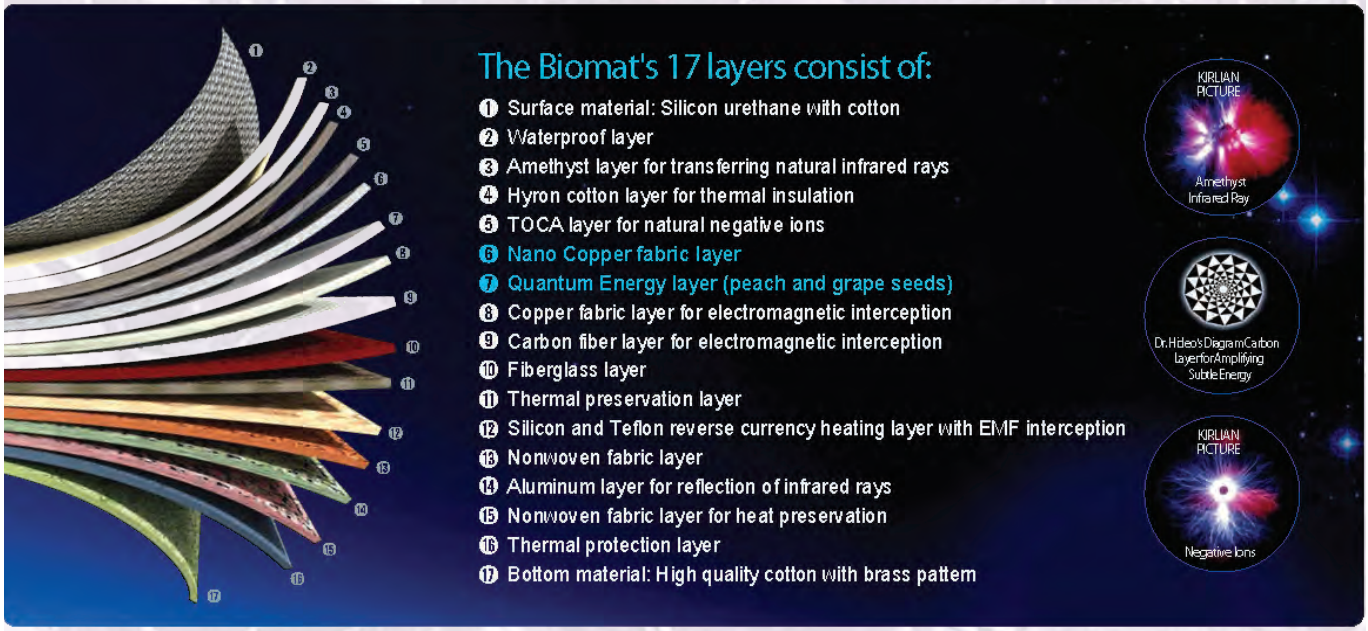
In 2009 I was diagnosed with prostate cancer...

With the BioMat, I am feeling greatly improved. I can now walk without pain and don't use a stick. I've now regained all the weight I'd lost. I can now swim one kilometre three to four times a week. In early March this year, I went to my doctor and he said not to worry about having another bone scan as I looked so well, so he said to keep doing what I'd been doing. I had flu-type symptoms and then a rash, and I believe that these were from the cancer cells dying and being eliminated by the body.

I believe that my body is healing, thanks to the Professional BioMat and the BioMat Mini. I sandwich my body between the two mats for two hours each day.

C. Andrews, Australia

on a bed of crystals...



The Biomat's 17 layers consist of:
1 Surface material: Silicon urethane with cotton
2 Waterproof layer
3 Amethyst layer for transferring natural infrared rays
4 Hyron cotton layer for thermal insulation
5 TOCA layer for natural negative ions
6 Nano Copper fabric layer
7 Quantum Energy layer (peach and grape seeds)
8 Copper fabric layer for electromagnetic interception
9 Carbon fiber layer for electromagnetic interception
10 Fiberglass layer
11 Thermal preservation layer
12 Silicon and Teflon reverse currency heating layer with EMF interception
13 Nonwoven fabric layer
14 Aluminum layer for reflection of infrared rays
15 Nonwoven fabric layer for heat preservation
16 Thermal protection layer
17 Bottom material: High quality cotton with brass pattern
KIRLIAN PICTURE
Amethyst Infrared Ray
Dr. Hideo's Diagram Carbon Layer for Amplifying Subtle Energy
KIRLIAN PICTURE
Negative Ions

A few weeks ago, I purchased one of the BioMat crystal mats that you are selling... After two weeks of one to two hours per day, I noticed two quite profound health effects: first, I found that I did not have to get up at night to go to the bathroom any more (previously I was up two to three times per night), and second, that my haemorrhoids had gone!

I wondered if it was the BioMat that had caused these effects, so I looked up the testimonials on their home page and I see I'm not alone. So here is my testimonial to add to the chorus of happy BioMat customers.

Anonymous (name withheld due to embarrassment)

When you purchase a BioMat, you are investing in an FDA Registered, ISO Certified, state-of-the-art medical device that includes an advanced Texas Instruments computer control panel and genuine amethyst crystals.

Strange Times...

THE SEARCH FOR LOST GIANTS IN INDIA

by Praveen Mohan
© June 2017

The Veerabhadra temple at Lepakshi in the state of Andhra Pradesh, India, has many curious stories surrounding it. They seem like fairy-tales, but if we dig deeper we can find evidence in support of them.

Did Giants exist a long time ago? And if they did, did they build the incredible structures at Lepakshi? Even though archaeologists argue that this temple was built just 500 years ago, the locals are convinced that it was built much earlier by gods of gigantic stature. (See https://youtube/TK7Ayt6Czzg.) There is a huge footprint in this temple, which could belong to a giant that stood around 25 to 35 feet [7.6 to 10.7 metres] in height.

The best evidence is not the footprint found inside the temple; it is the giant bull statue situated 500 metres outside the temple at Lepakshi. The town of Lepakshi, in the Anantapur District, has the largest sculpture of an Indian bull, or Nandi, in the world. Carved out of a single rock, this bull is exquisitely sculpted and is nearly 15 feet [4.6 m] tall and 27 feet [8.23 m] long. Archaeologists say that this bull was created just 500 years ago.

There is something very strange about this bull: it stands alone. According to sacred Indian architecture, every bull must be associated with a lingam and vice versa. Ancient Indian texts confirm that the bull must be placed in front of a lingam, but there is no lingam in front of it. Why would ancient builders sculpt the world's largest bull and forget to include a lingam, which is the main god? Why did they create this brilliant, monolithic statue and leave it on its own? Archaeologists don't have the answer, but the locals do.

Nandi statue at the Veerabhadra Temple at Lepakshi (Photo: Poornakedar)

The lingam associated with this bull is 500 metres away, inside the temple walls. This gigantic lingam stands nearly 12 feet [3.7 m] tall and is protected by a seven-headed reptilian god known as a Naga. This type of lingam is called a Nagalingam. This one is believed to be the largest in the world. If you look around this lingam, you can see that there is no bull in front of it.

So, what was the purpose of having a bull in front of a lingam? I have always argued that every sculpture in Indian temples was made for a reason, so how was the bull used? Ancient Vedic texts mention a way of worshipping the lingam, which is forgotten today. The ancient people put two fingers on the horns of the Nandi and viewed the lingam through it. Hindus strictly followed this routine until the last few centuries. This was the purpose of the bull.

If you climb onto this huge bull and look through the two horns, you can see the gigantic lingam even today. This not only confirms that this bull belongs to this lingam, but it reveals something much more astounding. The race who created these sculptures must have been tall enough to view the lingam through these horns. Since the bull is at least 15 feet high, the ancient builders must have been around 30 feet [9 m] tall. Today, if you view through the horns you will see only half of the lingam because the temple walls prevent you from

seeing the rest of it. Why would the ancient builders create a wall and a temple, leaving the bull outside?

The lingam and the bull were built by a race of giants, but the newer temple which is what we see today was built in the last 500 years. We can see a striking difference.

The original builders utilised a monolithic style of architecture. Not only are these structures much bigger than everything else, but the lingam and the bull were sculpted from single rocks. The new architecture is quite different.

Let's take a look at these walls. Huge slabs of stone were cut and were interlocked, in a similar way as at Machu Picchu in Peru. Don't get me wrong: this is also an extraordinary technological achievement. It would have been extremely difficult to fit these blocks together. Look at the corners. But these blocks were laid just 500 years ago. The temple as we see it today was built by assembling blocks of stone, but the original temple was of a single-stone architecture.

If we calculate the area of the original temple using the distance between the bull and the lingam, we find that it would have stretched for many miles, making it the largest temple in India. What happened to the rest of the structures of this temple? Locals claim that many thousands of years ago, a huge flood wiped out the rest of the structures of this original temple. The only features that survived the flood were the bull, the lingam and the giant footprint.

The giant footprint completely faded after the water had receded. However, to remember the past and make sure that the footprint did not erode away, sculptors carved on top

Top: The Nagalingam at the Veerabhadra Temple at Lepakshi (Photo: Keith Thomas)
Centre: Interlocking masonry, similar to that at Machu Picchu in Peru (Photo: Praveen Mohan)
Below: The giant footprint at the temple (Photo: Praveen Mohan)

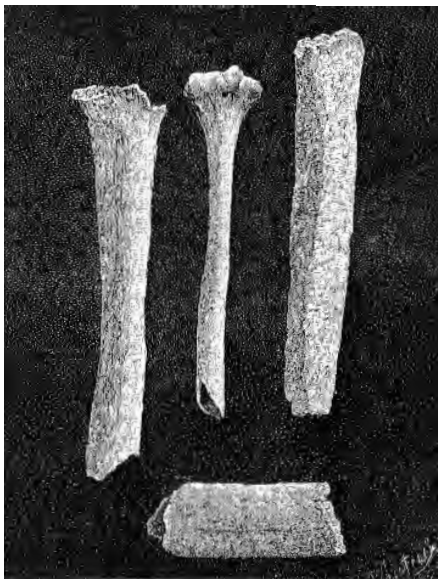
of the original footprint. So, the locals admit that sculpting on top of the footprint was done, but they insist that the giant footprint existed in the first place.

India still preserves its ancient religion and monuments. Its history, now regarded as mythology, is still read by millions of people. The most important history comes from the locals and is passed on orally from generation to generation.

The man in the two photographs [see previous page] is not just a local but is the official tour guide of the temple at Lepakshi. He explained that the original temple was built by gods and that this giant footprint belongs to Sita, the wife of Lord Rama. He told me something startling: Sita was 25 feet tall, but she was considered to be a short, petite woman. During her time, every adult was 28 to 30 feet [8.5 to 9.14 m] tall. Thousands of years later, Lord Krishna appeared, and he is said to have stood around 15 feet tall. The tour guide also mentioned that the builders of the new temple 500 years ago were eight feet tall. Is this a tall tale or is it true?

If it is true, why don't we find skeletons of giants? We find skeletons of 100-foot [30.5-metre] dinosaurs, a new one every week, so why haven't we found the giant skeletons of the ancient builders? Or has this information been suppressed by secret societies like the Illuminati to prevent us from learning the truth? Until 50 years ago, even archaeologists admitted to finding giant skeletons all over the world. Is it possible that they were merely finding the skeletons of ordinary human beings who suffered from gigantism? After all, even today we have these giants who stand seven to nine feet tall.

The Giant of Castelnau in France was about 11.5 feet [3.5 m] tall, and a photograph [see above] shows that the upper arm bone of this giant is nearly twice as thick as the human humerus in the centre. This photograph was published in 1890



Three bone fragments (humerus, tibia and femoral midshaft) of the alleged Giant of Castelnau are compared to a normal-sized humerus (centre). The bones were discovered by anthropologist George Vacher de Lapouge in the Bronze Age cemetery of Castelnau-le-Lez, France, in 1890.

in a science magazine called *La Nature* [vol. 18, issue 888]. This magazine is still popular today in France and is published under the name *La Recherche*.

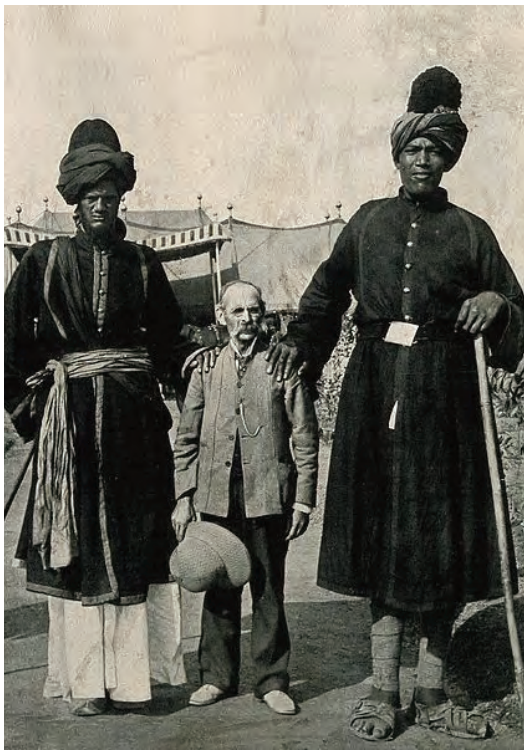
We have plenty of newspaper clippings about giants who stood eight feet [2.4 m] to even 15 feet [4.6 m] tall. Believe it or not, there are thousands of newspaper stories from all over the world which show giant skeletons, but somehow the public has been brainwashed by the New World Order into thinking that they are all hoaxes.

So, did giants build the temple at Lepakshi? Or is the evidence of the world's largest bull sculpture, the largest Nagalingam sculpture and the largest footprint just a hoax that's meant to fool us? Is there some truth to what the locals are telling us, or are they lying? ∞

About the Author:

Praveen Mohan is a writer, YouTuber and explorer of ancient mysteries. He is the author of a definitive book about the Coral Castle monument in Florida, USA, titled *Coral Castle: Everything You Know Is Wrong* (2016). He appeared on the *Ancient Aliens* TV show in September 2016. His YouTube channel, Phenomenal Travel Videos, has received tens of millions of views. He has researched several historical mystery sites including the ancient mounds of Ohio, USA, Ellora Caves in India and Machu Picchu in Peru. He has also discovered out-of-place artefacts which prove the existence of an ancient European and even African presence in India.

Mohan can be contacted at phenomenaltravelvideos@gmail.com. For additional information, visit http://www.phenomenalplace.com. To see his YouTube videos, go to http://tinyurl.com/l8r57ed. The full version of this article is at the web page http://tinyurl.com/mcmj36b.



Two Kashmiri Giants, at least 7'0" (2.14 m) and 7'4" (2.24 m) tall, with American travel photographer James Ricalton, were participants at the 1903 Delhi Durbar in India.

KNOWLEDGE IS NOT ENOUGH TO FREE US FROM ALL LIMITATIONS

In his first book, "One Light", Jon Whistler records the transmissions of Zadore, which show us the path leading to inner understanding. It changes the way we feel and think, freeing us from a life of illusion and suffering.

In "One Light", there are no mysteries, special symbols or words. There are no classes or lessons to register for. The transmissions are made available to everyone in plain and simple form.

Knowledge itself is not enough to free us from all limitations because it is based on what is learned through the senses, and understanding must come from a higher source within. "One Light" is the start of this journey.

Secrets Behind Chronic and Mystery Illness and How to Finally Heal
MEDICAL MEDIUM
ANTHONY WILLIAM
Foreword by Alejandro Junger, M.D.,
New York Times best-selling author of Clean

HEALTH

NEW!

If you've been doctor-shopping for ages and your chronic "mystery illness" hasn't been treated, you can learn much from Anthony William's **Medical Medium** that you won't find anywhere else. William's healing knowledge was sparked at the age of four when "the Spirit of the Most High" began speaking into his ear and describing people's health afflictions—as this being still does.

William has advice on good gut health, detoxification, and foods to avoid or eat regularly (yes, fruit). He sets out a 28-day healing cleanse program, offers meditations for soul-healing and suggests how to ask for help from "essential angels". His diverse case histories attest to the success of his protocols.

REVIEWED BY RUTH PARNELL

HOW TO OVERCOME HEART DISEASE
by Keith Foster, FLS
SAGAX Pub., Monmouth, UK, 2016
ISBN 978-0-9956128-0-8 (88pp)
www.keithfoster.co.uk

Today, millions are afflicted with heart disease. But what if it could be prevented and reversed with an inexpensive supplement? Keith Foster (see 24/01, 24/03) regards heart disease as chronic scurvy, a vitamin C deficiency illness, made worse by the fact that we don't produce this vitamin but must take it in as part of our diet. He acquaints us with the research of biochemist Linus Pauling, PhD, who promoted high-dose vitamin C with lysine for treating heart disease.

Foster notes that vitamin C lowers cholesterol build-up and is safer, cheaper and more effective than statin drugs—and it cannot be patented. He recommends having three grams and up to 10 per day.

In his easy-to-follow book, Foster restates the importance of taking supplements of iodine as Lugol's solution and charcoal-derived C_{60} carbon. He suggests ways to slow down ageing, such as grounding to harness beneficial Earth energy and neutralise the effects of unnatural electromagnetic frequencies.

This is sound advice, backed up by science, for our stressful times.

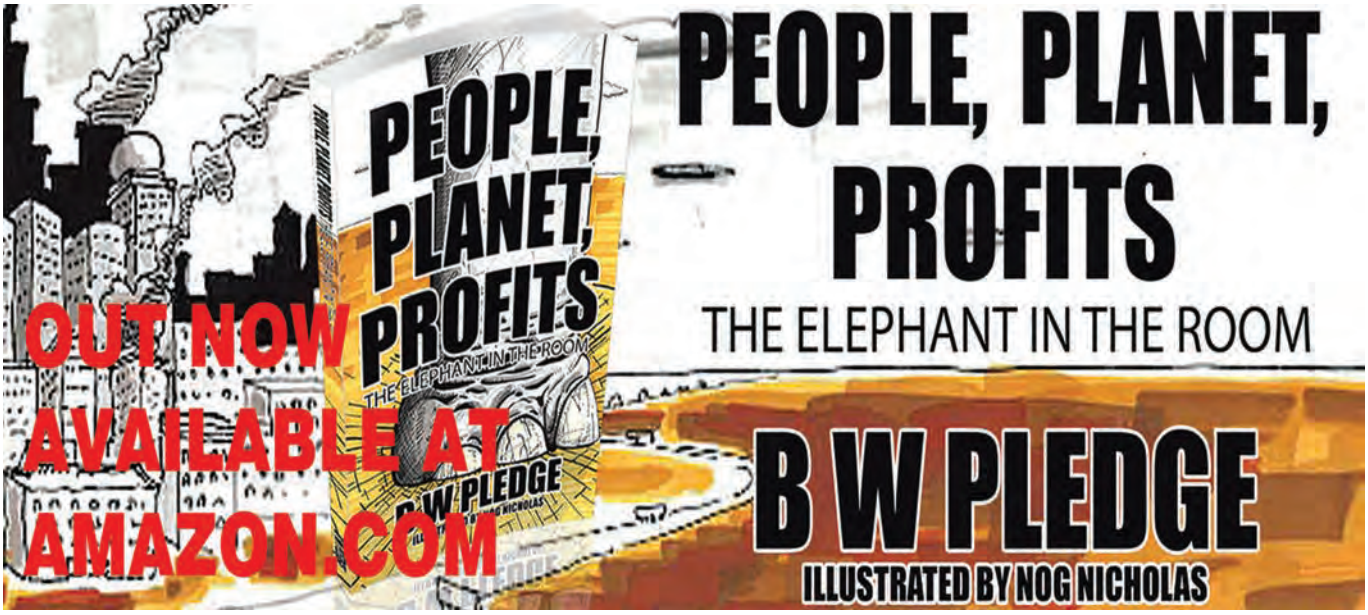
THE SEVEN DEADLY WHITES
by Karl Elliot-Gough
Earth Books, Winchester, UK, 2016
ISBN 978-1-78535-179-2 (370pp)
www.earth-books.net

Karl Elliot-Gough did a U-turn from his music-producing career a decade ago to study health and become a nutritionist and herbalist. Here he focuses on the so-called "diseases of civilisation"—cancer, diabetes, heart disease, obesity and other illnesses—that are damaging our health and leading to premature and needless deaths. The "seven deadly whites" that he examines are sugar, milk, flour, rice, fats/oils and salt, the seventh being "white lies".

For decades, independent scientists have been pointing out that denatured, processed foods present health risks, but the food industry, allied with marketers, advertisers and the media and supported by governments, has been ignoring these warnings in favour of amassing huge profits.

Elliot-Gough gives uncomfortable facts about the consequences of consuming diabetes-causing sugar, calcium-depleting milk, chemically adulterated wheat flour products, vitamin-exhausted rice, industrially produced polyunsaturated oils and demineralised salt. He expands his coverage with historical context and messages about wholesome foods.

In his final chapter, Elliot-Gough exposes more myths about junk foods and the cosy relationships between food regulators, lobby groups and corporations. He urges us to face up to our brainwashing and addictions, challenge the status quo and choose healthy options.



A NEW WAY NOW
by Dr Liz Elliott
Dr Liz Elliott, NSW, Australia, 2017
ISBN 978-0-9876146-1-2 (230pp)
www.newwaynow.com.au

Our world is in crisis, our climate is on the brink of disaster and our systems are nearing collapse. According to Dr Liz Elliott, a retired casualty medic, eco-activist and cartoonist, we face dire revolution unless we have the heart and mind to adopt renewal strategies. But first, we need to understand why our current models aren't working.

Elliott explains that an economic system that creates credit out of thin air, rewards the already rich and turns wage-earners into slaves is ultimately ruinous. A society that denies indigenous rights, allows fossil-fuel industries to pollute the environment and puts no restraints on corporate capitalism is doomed.

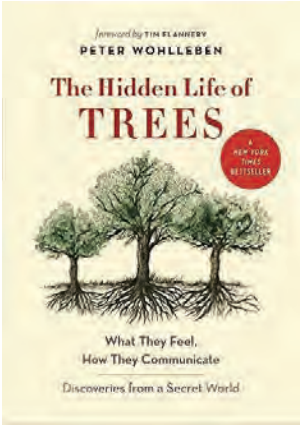
There has to be a better way, and Elliott has a prescription for what a more sustainable, vibrant, equitable and happy future will look like. Her many suggestions include reducing consumption, obsolescence and waste, supporting local initiatives, changing the money system, taxing the elite, lowering capitalist charges on roads, water and electricity, eliminating the derivatives market, sharing work more fairly and introducing a basic income. She cites examples of communities around the world that have already implemented alternative economic, social and ecological systems with great success. Above all, Elliott entreats, we need to let love and compassion shine through.

THE HIDDEN LIFE OF TREES
by Peter Wohlleben
Black Inc., Melbourne, Australia, 2016 (first pub. in Germany in 2015)
ISBN 978-1-86395873-8 (278pp)
www.nexusmagazine.com

You'll change the way you look at trees after reading this book by German forester Peter Wohlleben (see excerpt in this edition). Twenty years ago he adopted a more enlightened approach to forestry and applied it to the forest he manages near his home village of Hümmel. One ecologist who has inspired him is Dr Suzanne Simard, who discovered the "wood wide web" of forests; she's written the closing notes for Wohlleben's book.

It's fascinating to know that trees are social beings and have a form of language. They communicate with their own species and others, giving off scent compounds when under threat and activating chemicals that deter insects from doing further damage to them. They have a symbiotic relationship with fungi that help transmit electrical signals from the roots of one tree to another. They can send and hear sound waves, and can feel pain and joy. Trees create microclimates in forests, plan future procreation and adjust to lean and plentiful times. And while cooperation is a hallmark, competition is also a feature where mother trees exert "tough love", capturing the light and preventing their offspring from reaching adolescence too soon so that adults and children can mature properly.

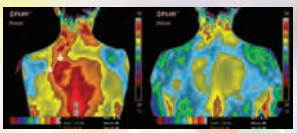
Wohlleben focuses mainly on the deciduous trees of Central Europe, such as beech, oak, spruce, pine and fir which age slowly and can have centuries-long life spans, but his findings have bearing on trees and forests worldwide. His book is enchanting as well as informative.



'Earthing'

When we are in contact with the earth we…

- Sleep better
- Stress less
- Reduce inflammation common to Arthritis, Chronic Fatigue, Eczema, Pain, Post Surgery and more
- Improve blood circulation, immune system, and general well being



Inflammation Before and After

When we don't connect enough with the earth, it makes sense that we lose something important & valuable. It's a paradigm shift to think that the earth's surface is the biggest known anti- inflammatory, antioxidant, and free radical scavenger, thanks to its plentiful free electrons. Now you can earth indoors, even while you sleep or work. We have seen many of our clients have life changing improvements.

Purchase the most reliable and highest quality products with a 1-year money back satisfaction guarantee, and the longest warranties. We are also the manufacturer.

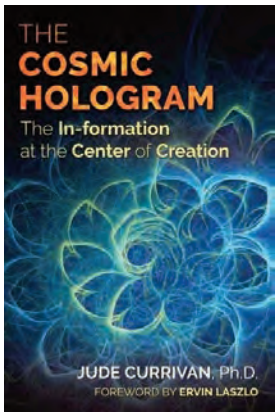
THE COSMIC HOLOGRAM
by Jude Currivan, PhD
Inner Traditions, VT, USA, 2017
ISBN 978-1-62055-660-3 (261pp)
www.InnerTraditions.com



As a four-year-old, Jude Currivan had a vision of Indra's net, the ancient Indian revelation of the numinous Cosmos. This perception of the reality of multidimensional consciousness has never left her. Now with a master's degree in physics, a PhD in archaeology and decades of experience and research to her credit, Dr Currivan has turned her attention to the Cosmos as a hologram manifested on scales from the subatomic to the universal.

Drawing on findings from classical and quantum physics, mathematics and information theory, Currivan explains how consciousness is the basis of everything. She posits that information is physically real and is more fundamental than energy, matter, space or time. It lets us be co-creators of the cosmic hologram of reality and thus conscious players in our evolutionary progress within this interconnected network.

Currivan sets out the instructions, conditions, ingredients and recipe for making a perfect universe as well as the "container" represented by the holographic boundary. She considers universal patterns such as fractal geometry, the "in-formed" design that allowed life to emerge, and holographic behaviours that exist all around us from the Internet to the numerical harmonics that underpin physical existence.

A member of the Evolutionary Leaders circle, Currivan examines the cosmic hologram model with reference to parapsychology, nonlocal awareness, near-death and out-of-body experiences and more. We all have it within us to explore the multidimensional universe, she says in her leading-edge book.

RIGOR MORTIS
by Richard Harris

ISBN 978-0-465-09790-6 (278pp hc)
www.basicbooks.com

Biomedical research is almost in a state of rigor mortis, warns American science journalist Richard Harris. One reason for this parlous state is human nature: it can mean that scientists stop themselves from speaking out for fear of losing financial grants, refuse to share information, cut corners to beat competing researchers, manipulate results or even commit fraud.

Far too many scientific studies are unreliable or irreproducible, Harris reveals, which has implications for medical treatments and future research. Among the numerous problems he describes are cell line contamination, inappropriate animal studies, inadequate sample sizes, poorly designed experiments, unforeseen batch effects, failures of equipment, changes in hypotheses, inherent biases, withholding of raw data, shoddy statistical analyses and lack of precision. The system for having retractions published needs re-evaluation, as does the peer-review process. Of concern, too, is that universities rely on quantity rather than quality of publications when considering academics for promotion and tenure. There's also a huge waste of taxpayer funding.

Harris sees an urgent need for a new culture, a meta-research approach and incentives to restore some integrity to how science is conducted. He presents anecdotes and testimony from biomedical whistleblowers who have identified these issues and have advice on how to avoid or fix them. A timely, thought-provoking overview.

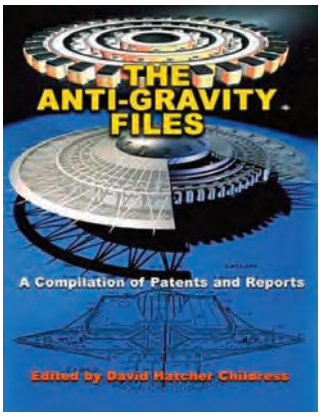
THE ANTI-GRAVITY FILES
edited by David Hatcher Childress
Adventures Unlimited Press,
Kempton, Illinois, USA, 2017
ISBN 978-1-939149-75-6 (196pp)
www.adventuresunlimitedpress.com
www.nexusmagazine.com



This newest compilation in the *Lost Science* series edited by David Hatcher Childress contains more than the title suggests. To start, Childress gives a brief history of attempts to develop antigravity devices, reactionless drives and gravity-control propulsion systems by inventors, research institutes and the military up until recent times. T. Townsend Brown may have succeeded because his gravitator research was eventually classified.

The Anti-Gravity Files features a 2002 patent awarded to Stephen L. Patrick *et al.* for a motionless electromagnetic generator, amazing graphics based on eyewitness reports of UFO crash retrievals and close encounters from Paul Potter's book on antigravity propulsion dynamics, and technical drawings from key patents. There are archival and recent photos of unidentified craft plus images and diagrams of the Haunebu disc allegedly built by the Germans during World War II.

Childress has a chapter on death rays and particle beam weapons as proposed by Nikola Tesla, and Ivar Slovac's article on the Tesla Pyramid Engine has references to the Egyptian and Bosnian pyramids as negative ion generators. Also discussed are mercury gyroscopes, foo fighters and quantum vacuum thrusters. There's an article by Dr Tom Valone on electrogravitics for advanced propulsion and a 1976 paper by Dr Edward Teller on electromagnetism and gravitation. A must for free-energy researchers.

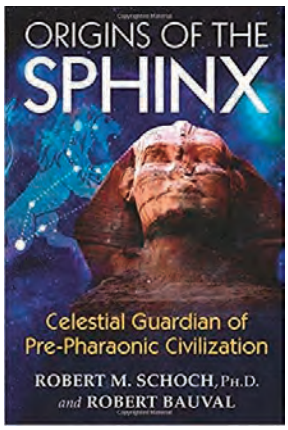
THE HALT PERSPECTIVE
by Colonel Charles Irwin Halt and John Hanson
Haunted Skies Publishing,
Birmingham, UK, 2016
ISBN 978-0-9574944-9-7 (784pp)
www.Amazon.co.uk

It was at the urging of Colonel Charles Halt (USAF Ret.) that this book about the 1980 Rendlesham Forest incident was written, to clear up misleading accounts in reports and books. Halt called upon former British policeman John Hanson for the task. Hanson and his partner Dawn Holloway have written an 11-book series focusing on UK ufology (23/05, 21/06). Nick Pope, a former UK Ministry of Defence staffer and UFO desk officer (1991–94), again contributes a foreword.

The events occurred at and near the twin US Air Force bases at RAF Bentwaters and Woodbridge in Suffolk, England, from 25 to 28 December 1980. Halt was a Lt Col and the Deputy Base Commander at the time, and led a team into the forest on the third night. Sightings of coloured lights in motion were reported, and a chief witness, Sgt Jim Penniston, said that he made contact with a landed craft. When he touched the strange symbols on its exterior, he received a binary-code mental download, which he then noted for later translation. Radiation readings were taken and physical evidence was examined. An alien presence is speculative.

Halt and Hanson intersperse their commentaries throughout the book, which also highlights accounts of UFOs and ET beings in the East Anglia region from World War II to just five years ago. With masses of photos, illustrations, documents, witness reports and news clippings, this hefty book is another significant addition to the UFO literature.

ORIGINS OF THE SPHINX
by Robert M. Schoch, PhD, and Robert Bauval
Inner Traditions, VT, USA, 2017
ISBN 978-1-62055-525-5 (509pp)
www.InnerTraditions.com



Geologist Dr Robert Schoch and construction engineer Robert Bauval have joined forces for this reassessment of the Great Sphinx of Giza and its historical, religious and astronomical contexts (see 20/01, 20/02, 23/01). Bauval shows that there's little evidence linking the Sphinx with the Pharaoh Kephre. He revisits his Orion correlation theory and dates the Sphinx carving to 10,500 BC, its east-facing orientation meeting the rise of Leo at the spring equinox. Schoch updates his research into rainwater weathering of the Sphinx and its surrounds, and the seismic studies conducted with Thomas Dobecki.

Bauval and Schoch both agree that the Sphinx's head was carved from a natural limestone outcrop thousands of years before the start of Egypt's Old Kingdom, but it probably first had the likeness of a lion or lioness. Schoch suggests that the dating of Göbekli Tepe in Turkey to about 12,000 years ago supports the thesis that advanced civilisations existed prior to the time frame accepted by mainstream archaeologists and Egyptologists.

Included in the extensive appendices are Bauval's reports on the "paradigm police" and the sacred mounds of the Memphite region, as well as Schoch's 1992 paper on the Sphinx's age and his case for extreme solar activity, not a cometary collision, having initiated the beginning and end of the last ice age. The archival and recent photos and colour plates add to the impact of this engrossing book.

THE ALIEN ENIGMA
by J. P. Robinson
Earthrise Books, UK, 2016
ISBN 978-1-53323405-6 (432pp)
www.jp–robinson.com
www.Amazon.co.uk

A 20-year effort studying UFOs and alien contact with Earth compelled British researcher J. P. Robinson to write this book. To set the tone, he compares the 1969 US Condon report with the 1999 French COMETA report, the first designed to conceal and the second to reveal. He summarises key events including the 1980 Rendlesham Forest incident in England and mass sightings such as the 1942 Battle of Los Angeles, the 1991 Mexico eclipse flypasts, and the 1997 Phoenix Lights event. He outlines the seven UFO crashes in New Mexico from 1945 to 1948, the establishment of MJ-12 to control the cover-up, covert operations set up to research UFO technology and ET knowledge, and Bob Lazar's testimony about back-engineering UFO craft at S4 in Nevada. He looks at black-budget funding, deep underground bases, and the disturbing revelations of Phil Schneider and Thomas Castello on alien experimentation facilities.

Robinson covers well- and lesser-known abduction cases, animal mutilation mysteries, alien implants and crop circles with ET themes. He analyses the Billy Meier contacts and testimony from astronauts and remote-viewers on an ET presence on the Moon and Mars. He remarks on alien communication, stargates and time paradoxes in his chapter on microbiologist Dan Burisch, a former Majestic operative.

While Robinson acknowledges the movement towards disclosure, he concludes that those in the know want to maintain the cover-up.

FILM

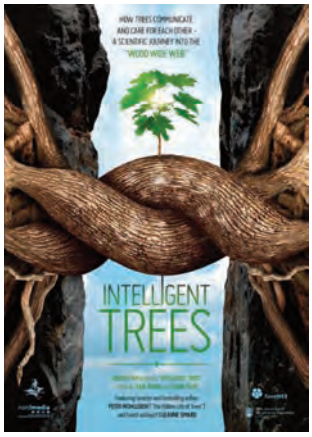
REVIEWED BY RICHARD GILES

JUST ONE DROP
by Laurel Chiten
Blind Dog Films, USA, 2017
www.blinddogfilms.com

The documentary film *Just One Drop* looks into homeopathy, a controversial form of medicine which treats the whole person, not just the disease. It uses minute doses of a highly diluted substance that stimulates the body to heal itself via a release of dynamic energy in a water medium.

Among the film's revelations is that Australia's National Health and Medical Research Council (NHMRC) misled the public over its 2015 report in which it concluded that there is "no reliable evidence" on the effectiveness of homeopathy. The film examines the findings of a rigorous two-year Australian–British investigation which shows that the NHMRC used "unprecedented" scientific methods in reaching its conclusions. A formal complaint is now before the Commonwealth Ombudsman, detailing procedural and research flaws, conflicts of interest and reporting inaccuracies (see http://tinyurl.com/khksmoc).

The documentary is produced and directed by multi-award-winning US filmmaker Laurel Chiten and has been nominated for an Emmy. A must-view, thorough documentary on homeopathy. Visit the website for details of scheduled screenings.



INTELLIGENT TREES
by Julia Dordel and Guido Tölke
Dorcon Film Productions,
Hannover, Germany, 2016 (45mins)
www.intelligent-trees.com

Trees talk, know their family ties and care for their young. This seems unbelievable, but it's true! For this film, German forester Peter Wohlleben, author of *The Hidden Life of Trees* (see excerpt and review in this issue), teamed up with forest ecologist Dr Suzanne Simard of the University of British Columbia. Both of them have been researching tree communication for decades.

Intelligent Trees covers many observations noted in Wohlleben's book: the stump that's been kept alive by neighbouring trees, the old tree-couple that looks after each other, and the mother trees that nurture their offspring. This film matches these observations with the latest findings from forest science.

Under the forest floor lies the "wood wide web", a network of roots and fungal threads over which trees share information with each other and their environment. Trees of like species support one another, forming bonds with family and friends. They send out chemical warnings to other trees when they're under attack by insect and animal predators. They have language, intelligence and feelings.

This documentary will amaze you.

(In June 2016, Dr Simard gave a TEDSummit presentation, "How Trees Talk to Each Other", in which she explains that "a forest is much more than what you see"; to view it, go to http://tinyurl.com/y7kuqvgt.)

HARD TO FIND 100% EDTA Oral Chelation (USA)

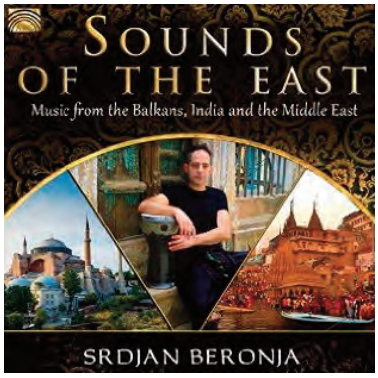
An alternative, ground-breaking guide to harnessing the life-transforming power found where the worlds of quantum science and the paranormal meet. Learn how a boy of 5, who couldn't read or write, mentally calculated the cube root of 268,336,125 in six seconds. Or how western medics watched in disbelief as a cancerous tumor was destroyed in minutes by the focused thoughts of Chinese doctors. Or how a dowser pinpointed a stolen harp located over 1,500 miles away without leaving his home. This book shows how to plug into the Unified Force that makes all this possible enabling a new confidence to fulfil your own, true Destiny.

Available from Amazon (Kindle or paperback)

REVIEWED BY RICHARD GILES

SOUNDS OF THE EAST
by Srdjan Beronja
ARC Music, UK, 2017 (62mins)
www.arcmusic.co.uk

Srdjan Beronja is a Serbian-born travelling musician who studied Indian classical tabla in Varanasi. Here, Beronja plays tabla and daf (frame drum) percussion as well as violin, bansuri, oud and sitar. Guest artist Stefan Sablić is on oud and qanun (an Azerbaijani zither-like string instrument). This warm mix of Indian and Balkan music journeys from a dawn chorus in Kerala in South India to a night-piece finale with a traditional Middle Eastern lullaby that Sablić improvises on qanun. An intriguing live album recorded on location in India, the Balkans and the Middle East.



XX
by BaBa ZuLa
GlitterBeat Records, Germany, 2017 (2CDs, 72+60 mins)
www.glitterbeat.com
www.theplanetcompany.com

The crazy Turkish band BaBa ZuLa has compiled a 20th-anniversary album expressing the spirit and revolution of their manic sounds—psychedelic rock, electronica, jazz, rock, world and country among them. Inspired by the Turkish psychedelic music pioneers of the 1960s, Osman Murat Ertel and Levent Akman formed BaBa ZuLa in 1996, developing their own brand of so-called Istanbul psychedelia and since embracing various styles from Anatolian folk and krautrock to reggae and dub. The second disc comprises dubs of BaBa ZuLa tracks by artists such as Mad Professor, Dr Das of Asian Dub Foundation and Dirtmusic. An electrifying CD set.

MOUNT ROYAL
by Julian Lage and Chris Eldridge
Free Dirt Records, USA, 2017 (42mins)
www.freedirt.net
www.theplanetcompany.com

This second album from virtuoso guitar duo Julian Lage and Chris Eldridge is a testament to their technical mastery and innovation. On *Mount Royal* they include eight original songs and four new versions of older bluegrass tunes, all of them instrumental tracks with beautiful guitar work. Lage's impressive jazz background comes through on this CD, and together the two musicians excel with their old-time, gospel and bluegrass arrangements. There's a fine, relaxing quality to the whole disc. Exceptional and enjoyable music.

BEST OF BALUJI SHRIVASTAV
by Baluji Shrivastav
ARC Music, UK, 2017 (80mins)
www.arcmusic.co.uk

Baluji Shrivastav, OBE, is a multi-talented Indian–British musician whose genres include Indian classical, rock and jazz. He plays sitar, surbahar (bass sitar), tabla and more. Blinded in early childhood, Shrivastav in 2012 founded The Inner Vision Orchestra, an ensemble of 14 blind or visually impaired performers from around the world; some of their awesome recordings with him are featured here. This anthology spans three decades and reflects Shrivastav's explorations with diverse styles and partnerships. He's worked with Annie Lennox, Stevie Wonder, Shakira, Massive Attack and his band Jazz Orient (or Re-Orient). A remarkable disc.

An inspiring read...

A well-known Australian TV and radio broadcaster, educator, astrologer, psychic and host of RadioOutThere.com, Barry Eaton was diagnosed in 2013 with throat and thyroid cancer—conditions which threatened his very livelihood, let alone his life.

Barry Eaton feels privileged to have survived his ordeal and live to tell the tale. He emerged with not just a new lease on life but a deeper understanding of his purpose as well as the importance of family and friends. His book offers insights for anyone who has or knows someone with a life-endangering illness. It's a life-affirming healing journey.

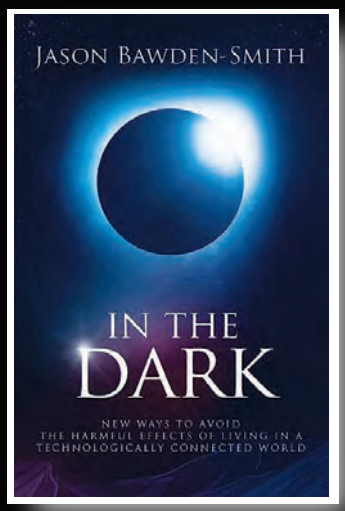
The Australian Constitution 1901 orders:In Clause 1 Preamble "... Whereas the people ... humbly relying on the BLESSINGS of Almighty God, have agreed to unite on ONE INDISSOLUBLE FEDERAL COMMONWEALTH under the CROWN of the United Kingdom of Great Britain and Ireland ... and under the Constitution hereby established : ..." , also The Schedule, and s.42 of the Constitution 1901. Clause 5 Preamble orders "... This Act, and all laws ..." (ss. 58, 59, 60, 120), "... made by the Parliament ..." (s.1), "... of the Commonwealth under the Constitution, shall be binding on the courts ..." (s.80, s.120) "... judges ..." (ss. 70 - 80) (s.61 s.72 (i) "... and people ..." (s.34) "... of every State and of every part of the Commonwealth ... ", with each elector voting only once (s.30). The ONE Parliament (Cl 1 Preamble) (s.1 s.125) has EXCLUSIVE powers to make laws (s.52) concerning the matter of the **public service** of the Colonies (Cl 6 Preamble), was transferred (s.52 (ii)) to the Executive Government of the Commonwealth (ss. 62 & 84), in 1901, so how is it possible for the Commonwealth Parliament to sanction sale of assets the exclusive (s.52) Powers of the Parliament (s.51), without the consent of the people (s.128) ???. NB There are no REFUGEES or CLIMATE CHANGE under the Powers of the Parliament (s.51). These concern international matters, which disqualify advocates of these issues from Parliament by ss. 44(i) & (ii) & 46.

The Aboriginal people named a half-caste a "yella fella", and left them in the bush to die. The Christian missionaries saved ("stole") them. The Aboriginal children of the Oligarch property owners, saved ("stolen") by the Christians missionaries constantly reminded Ausies how "white" they were, so they should be counted in the population (s.25). s.27 was removed by a s.128 People's Referendum to remove the reference to "Aboriginal natives" from the Constitution 1901 (s.127). NB The English Dictionary explains that an Oligarch is **never** a citizen of any country they live in, and why.

When the People's s.128 removed "Aboriginal natives' (s.127), from the Constitution 1901, in 1967, the High Court had no s.128 authority to restore s.127 to the Constitution since 1967, and call these people "aboriginal" or "Australia's first people's" in the HC Mabo decision . The Rule of Law language instructs that an Aboriginal "yella fella" is called a "mulatto", and if of mixed ethnicity they are called "heterogeneous mulattoes". Australians will note that neither the High Court nor the Parliament (s.1), uses the English Dictionary to give "recognition" in the Constitution 1901 to these "yella fellas" so must explain what language the laws of Australia are being written in, that allows "yella fellas" or "heterogeneous mulattoes", to be considered the "first people of Australia". NB The High Court cannot change the Constitution 1901 (s.128), they can only explain it (s.76), since 1984 the High Court's "Metwally" of 1984 explains the Parliament (s.7 & 24) are "artificial entities only that represent only the people", and s.128 confirmed in 1999, the Queen (s.61), is to continue to prosecute the Laws (s. 58, 59 & 60) because she is a **person** of "the people"(Clause 1 Preamble & s. 108), who are to be tried for Crimes by s.80 & s.120. (no judges are appointed by the Constitution 1901 for "state courts" for Crimes. A "Tribunal" was ruled by "Metwally" HC (1984) to have no judicial authority, and this is because of s.80 & s.120. A Jury sits with a Justice of the Peace, and the JP signs the Warrant for Prison (s.120).

Read up on EMFs



Realising particular electro-magnetic frequencies were playing a major part in his health woes, environmental scientist and entrepreneur Jason Bawden-Smith healed himself after studying the research of top EMF scientists.

Bawden-Smith says that industry and government authorities are not responding well to findings about the dangers of non-ionising radiation, but he sees hope that entrepreneurs can develop EMF combating systems to stay ahead of the new devices emitting stronger radiations that will hit the market in the coming years. He gives tips on protection from the EMF onslaught.

He's now launched an education platform, EMF Warriors, with world-renowned experts. His book has apt advice for overcoming electrosensitivity and improving wellbeing.

Neoconservative Imperialism Continued from page 25

profound likeness in Washington's official policy towards Afghanistan in the ancient Zoroastrian war of the light against the dark, whose origins began in the region now known as Afghanistan. This likeness has grown visible as America's entanglement in Afghanistan threatens to backfire once again.

Afghanistan's civil war followed America's Cold War while Washington walked away. A new strain of holy warrior, the Taliban, arose, but few in America cared to look. As the horrors of the Taliban regime began to grab the headlines in 1998, Fitzgerald and Gould collaborated with Afghan human rights expert Sima Wali, with whom they contributed to the book project *Women for Afghan Women: Shattering Myths and Claiming the Future* (Palgrave Macmillan, 2002). In 2002, they filmed Wali's first return to Kabul since her 1978 exile.

Fitzgerald and Gould's efforts at combining personal diplomacy with activist journalism are a model for restoring a necessary dialogue to American democracy. Their book *Invisible History: Afghanistan's Untold Story* (City Lights, 2009) lays bare why it was inevitable that the Soviet Union and the United States should end up in Afghanistan and what that meant to the future of the American Empire. Their next book *Crossing Zero: The AfPak War at the Turning Point of American Empire* (City Lights, 2011) lays out the paralysing contradictions of America's Afghanistan–Pakistan strategy. It clarifies the complex web of interests and individuals surrounding the war and focuses on the little-understood importance of the Durand Line of demarcation between Afghanistan and Pakistan. Their novel *The Voice* (BookSurge, 2008) reveals the esoteric side of their Afghanistan experience.

Fitzgerald and Gould's articles and blogs have been published in numerous online and print journals and newspapers such as the *Boston Globe*, the *International Herald Tribune*, the *New York Times*, Huffington Post, GlobalPost, The Middle East Institute's *Viewpoints*, *CounterPunch*, Sputnik News and OpEdNews. They have been interviewed by many major mainstream and alternative TV and radio outlets.

Visit their websites http://www.invisiblehistory.com and http://www.grailwerk.com.

Editor's Note:

This article is excerpted and edited from parts one and four ("American Neocon Imperialism Leads the World into Dante's Vision of Hell" and "The Final Stage of the Machiavellian Elites' Takeover of America") of a four-part series by Paul Fitzgerald and Elizabeth Gould, posted on 25–28 April 2017. To access the original articles with hyperlinks and for more biographical information, visit the website http://www.invisiblehistory.com.

NEW ZEALAND DVD
"VOICES FROM THE FOREST"

Sacred sites researcher Gary Cook wanted to find out whether the faery folk beings are physical or whether they live in another dimension.

Maori folklore speaks of the 'Turehu' or 'Patupaiarehe: a small faery folk, 3 to 4 foot tall. Often fair haired or occassionally witnessed with red hair and with green or blue eyes and pale skin.

He engaged a camera crew and went into the bush to find out. Never in a million years did he expect to be rewarded so generously when the crew captured a supernatural anomaly on camera.

The UFO Crash at Aztec, New Mexico Continued from page 65

of the greatest works of construction on your world were inspired by a joyful effort of our people and yours, in your distant past. We leave these wherever we go. And you romantic creatures have tried for many generations to explain why such huge monuments to human engineering were ever built in the first place. Why, they were built to express the joy of living, of course! And the great sense of satisfaction our people have gotten from working side-by-side with yours has been one of our biggest joys in life. That is another reason for our being here. Surely even a small child can understand such joy?"

INT: "You keep talking about a message for us. Can you define that a little more?"

EBE: "We simply *are*. We have no deeper purpose than to *be*. We do not wish direct contact with your people. You would reject us in your present frame of mind. So we seek to be accepted at the lowest level possible, and hence the broadest one possible. That is as a cultural myth; we seek to be the next Santa Claus to put it bluntly. This must come *to* your people, *from* your people. The understanding will be given you by the widened perceptive skills of these children we are bringing you. For your sakes this must not come from political or religious leaders. It must flow evenly throughout all the common cultures of the Earth. The message is not that we are here, but that each of you can control where *you* are going. Be like us, or different; as you choose. But *you* choose, not your political leaders who believe that only a tiny percent of the elite can rule wisely over their masses; or those who spread fear of death in order to enrich their lives through religion. Knowledge is only good when spread like seeds from which wisdom might grow; and faith has purpose only when it is not created of fear. With faith in the wisdom of truth, and in each other, your world will come to ours soon enough. Our hope is to be able to receive you as friends and guests when you arrive. That is our message. You must do the work for yourselves. If you do, you will keep all the rewards." ∞

Reduce the radiation during a phone call by eliminating wire to the in-ear speaker and replacing it with an Airtube. The Airtube stops the induction of magnetic fields from reaching your ear, thus reducing the EMF to your brain and inner ear by 99.9%.

Now available from NEXUS Magazine

Producing excellent sound quality, the Airtube Stereo comes with two airtubes for use with mobile phones or other devices.

Suits most mobile phones and devices: 3.5mm plug

Books, Films, Mags & Media

'HOW TO OVERCOME HEART DISEASE' is a book that details a fresh insight into this dreadful condition in an easy-to-understand style. It provides groundbreaking knowledge for everyone worried about this situation. Well referenced, clearly written and easy to follow, the impetus for his book's creation refers back to a 70-year-old tragedy: vital knowledge in the public domain was sidelined because it couldn't be patented. Humanity faces an existential crisis...

How do we deal with millions of jobs evaporating in the near term, and a future teetering between global carnage and a brilliant utopia?

What if anyone could unleash world-wide plagues?

What if jobs lost to automation don't come back?

What if our survival depended upon teaching machines what it means to be human?

What can you do?

"... lively writing and clear presentation of these important topics. It certainly deserves a wide readership."
— Sir Martin Rees, Astronomer Royal and author of *Our Final Hour*

http://humancusp.com/book1

... There are answers.

IMPROVE YOUR GUT HEALTH

NEXUS

Bowel Restore is simple and non-stressful to use. It is the latest and greatest and everyone is raving about their results from using it.

Is it Time to Renew Your Health or Finances?

What Is Elixir of Life Ormus?

Ormus is a carrier, in the form of pure sea crystals that have been imbued with subtle but extremely powerful energy (..ies) to deliver an experience of opening to much more of who you truly are.

How Do I Take It?

10 - 20 drops under the tongue twice daily first thing in the morning and last thing at night.

What Effects Can I Expect?

Some experience an almost instantaneous feeling of happiness, well-being and contentment.
For others these effects occur more gradually.
Most people discover that taking Ormus consistently has a profound impact on their over all quality of life.

Commonly reported effects include…

- Healing of "difficult" conditions (health, circumstances, relationships)
- Heightened intuition and an increasing sense of certainty
- A sudden increase in abundance - often from unexpected "windfalls"
- Expanded conscious awareness - akin to mystical insight
- A reconnection with individual life purpose
- A profound sense of love for, and harmony with, all and everything

The ORMUS of Unreasonable Happiness

Ormus Superfood by Denis of Oz **uplifts you into states of Happiness, Love, Richness, Spiritual Evolution, Consciousness, Wellness for pets, as well as brings agricultural productivity.**

See the rich vibrational field above our Ormus!

"Ormus is the Bridge between matter and Spirit" - Barry Carter

"Plants, Crops & Animals LOVE Ormus too!" (Pets Thrive & Heal)

ORMUS Innovation.. .....NOT Imitation.

What Have Customers Reported About Elixer Of Life Ormus?

I Am Happy Again: I am finishing my Ormus Bonus Pack and I must say things have certainly changed! I have fell in love and moved in with a wonderful man and have just left my job (after 10 years). And I am Happy again! **- Tamlyn, Dandenong Vic Oz**

Effectiveness & Abundance: A friend came over before a busy show and I put 20 drops of your latest MA Supermoon Ormus in her kombucha drink. She can't stop getting everything done and she feels so happy. I had more luck again today too as I sold 2 dogs for $1100 to one farmer here. Thanks again Denis, Wowsa! **- Karen Albury NSW (Australia).**

I FEEL THE LOOOOOOOVE!: Your 'Self Regeneration' Ormus is brilliant. Every ailment and injury I ever had has been visited from a few seconds to 24 hours, pained but not as bad as when they occurred, and then healed. Even from 1974! My meditations are also noticeably deeper. I have more energy too after having glandular fever so many times, a noticeable effect - and so quickly. My Hubby took it too. He is getting a strong effect, and is LOVING IT! Thank you so much. We got the Soul Freedom Pack Oh, and did I mention the LOOOOOOVE? Amazing! - **Toni, Robina (Australia).**

Uplifting Feelings of Joy!: "Denis, Your Ormus is one of the BEST I have ever had. I have taken it 3 times now. Here is an interesting observation: The first 2 times afterwards I felt the familiar Ormus 'spin' in my third eye. Wonderful uplifting feelings of joy, peace, contentment overcame me after awhile. Very noticeable! **- Nancy (USA)**

Your MA Ormus Really Does the Job!: - *With the first bottle of MA, I saw gold sparks, then money started coming from little wins and then some bigger ones. The dreamtime bottle really amps the dreams up, I dont wanna wake up; - Your Ormus really does the job. Cool to have found your stuff.* **- Kim McNab Parnell NZ**

4 Times The Winnings:
After ordering some more Mother of Abundance (MA), I went to play Keno and the machine Lit Up! I went to the desk and was told I had won $8000. So I rang Denis and raved about it, It was 4 times what I won with the last MA **- Jon A, Whyalla SA Oz**

100% MONEY BACK GUARANTEE

Bonus & Family Pack Only

Special NEXUS Offer: Mention 'Nexus' with orders over $95 & receive a 10% Discount!

PURE DELIGHT HEMP

now stocking

Hulled HEMP SEEDS

Our 100% Australian Hulled Hemp Seed is produced by de-shelling the whole seeds from the hemp plant, removing the majority of the outer crunchy shell, leaving the soft, nutty inner kernel.

Hulled hemp seeds are a raw, vegan friendly source of complete protein, vitamins & minerals. They are also high in essential fatty acids containing an ideal balance of omega 3, 6 & 9 GLA.

HEMP PROTEIN FLOUR

High energy, organic, stone ground hemp seed protein flour contains all 8 essential amino acids - over 32% complete protein.

Aids brain power and regeneration of cells. High in fibre, calcium, magnesium, iron, zinc, potassium, sulphur & chlorophyll.

OUR TOP SELLER GOLDEN FACE SAVER

This face crème was created as a powerful antioxidant formula with co-enzyme Q10, aloe vera, Vitamin C and hemp oil. Essential oils of lavender and mandarin to brighten your day.

Anti-aging moisturiser with anti-wrinkle properties for smooth skin. Effective treatment for sunspots.

PURE ORGANIC HEMP OIL

The ultimate blend of raw hemp seed oil, essential fatty acids, omega 6 and omega 3 for soft skin, rich hair, all cell functions & complete health.

FLAT RATE $10 POSTAGE AND FREE POSTAGE FOR ORDERS OVER $120
